How do you know, Len? Did you know Mr. Beverage?

> You should get to a community's
> civil engineering office and look at the various electric line routings.

Why? Anyone can see where they run, just by looking.
>
> If you can't get out and LOOK at the surroundings where you are,
> that's not my problem. The evidence is right in front of you, above
> you, maybe below you. Old history books won't help you there.

What is your point, Len? I know what power lines look like, how they work,
voltage levels, etc. In fact I probably know more about the electric power

distribution network than you do, particularly at the medium-voltage level.

You keep ducking the question of *how* to convince the "professionals" at FCC and the BPL companies that BPL is not a good idea.
>
> I'd suggest you get a strong beverage, one that will relax you first
> before trying to pull off that "ancient wisdom" dums**t again.

You don't really know how to convince them, do you, Len?
>
> You waste too much of too many folks' time with arguments
> over semantic minutae.

Not me, Len. You're the absolute master of that sort of debate. You post here more often, and at greater length, than anyone else. Yet you actually say little or nothing of practical value. You're full of criticism for others, particularly the ARRL, but can't take even the most well-mannered criticism or disagreement on any issue.

You've waved your "professional" credentials here innumerable times, but you can't tell us how to convince FCC of something that's blaringly obvious to even us poor dumb amateurs.

> Plonk

I don't think so.

THE BPL FIGHT: ART BELL W6OBB VS. BPL.

If it did not know before, a large portion of the American public is now keenly aware of the danger that Broadband Over Powerline Internet access poses to the nation's emergency communications infrastructure. And you can thank radio talk show host Art Bell, W6OBB, and ARRL President Jim Haynie, W5JBP, for bringing it to everyone's attention. Amateur Radio Newsline's Mark Abramowicz, NT3V, had an opportunity to speak with the internationally famous radio talker and has the rest of the story:

--

From the high desert in the great American Southwest, a call to arms has been sounded.

From his home base in Pahrump, Nevada, W6OBB - better known to millions of commercial radio listeners as Art Bell - has called on America to stand up and fight what he charges is the greatest threat to the nation's security - Broadband Over Powerline.

Bell charges BPL will cripple the nation's emergency communications backbone - striking at the heart of homeland security.

Bell picked up the charge against BPL during his radio show broadcast Saturday, March 20 in which he introduced ARRL President Jim Haynie, W5JBP to his audience.

Haynie and Bell pointed out the BPL interference threat extends far beyond the amateur bands. Both Haynie and Bell warned that many police and fire companies, federal disaster agencies and the FBI and the military would be rendered helpless if BPL is rolled out across the nation.

Bell says he's especially worried about the potential of another major attack against the United States and what BPL would do to our nation's ability to communicate.

"The emergency communications, my God, aircraft, amateur radio, FEMA, any other emergency agencies that are going to have to rely on HF communications," Bell says.

"We certainly can't depend on satellites. As a matter of fact, if we should get into a conflict, some sort of major conflict the satellites will be the very first thing that will go. And minus satellites for communications, we're dependent on the good old-fashioned shortwave bands, VHF, UHF, the whole schmear to keep our nation talking. And in a time of national emergency we need to be able to talk to each other."

Bell says he's appalled at the behavior of the Federal Communications Commission. He says they're acting like cheerleaders instead of regulators. He charges corporate greed is driving BPL and ignoring the studies showing the technology - as proposed on the HF bands - won't work without causing massive interference.

"I've always had the deepest respect for the Federal Communications Commission," he says. "However, I think in recent years, there've been a lot of changes at the FCC that include the fact that there aren't so many engineers at the commission any longer, but there are a lot of bureaucrats."

Bell says he believed after reading the Federal Emergency Management Agency's assessment of BPL that the findings would have been enough to shut it down.

"The FEMA filing was very strong," Bell says. "They essentially said, 'Look, our receivers and transmitters are not going to be able to function with BPL in place.' And, they specified the power levels they would have to go to continue to communicate and suggested the taxpayers can't, wouldn't be able to afford such changes.

"So, with that kind of filing, frankly when it came out I thought BPL was dead. Boy was I wrong!"

After doing more research, Bell says he decided to take the case to his listeners. And he says the only way to do it is to point out the risk to their safety.

"I don't think we're going to combat it by saying, 'Save ham radio." The public doesn't care enough and I'm sorry to have to say that, but that's what I believe," Bell says.

"I love ham radio. It's been my life. I've been a ham since I was 12. But the greater, larger American public just doesn't care enough about ham radio.

"And if they think they can plug in their computer to the wall and have instant internet, that's a more attractive idea to them than the guy down the block with a tower in the air."

Bell says his mission is clear: "I do a radio program on 500 radio stations nationwide, including the top 50 markets in the U.S., " Bell says. "And I'm going to do everything I can to drive this home as hard as I can that communications, and certainly ham radio is part of that emergency communications chain, there's no question about that.

"But emergency communications across the board are threatened by BPL."

Bell says all hams need to wake up and heed his call to action.

"We have to get to the larger media in America and, as hams, we have to make the general public, underline the word general public, aware that our emergency communications are threatened," Bell says. "The American public remembers 9-11. The American public knows what the continuing threat is.

"We've declared war against terrorism and why would we want to turn around and cripple our effective ability to wage war? And that's exactly what BPL is going to do."

Bell says if energized with information about BPL's risks to national security, millions of Americans can quickly become allies.

"We need to get the word out to the general public and begin to have them write to their congressmen, their senator," Bell says. "And that's the only approach that I see at this point with the juggernaut that is presently underway from the Federal Communications Commission and the (BPL) industry, the only way we're going to stop it is to make the general public aware of the threat."

Bell says there are other issues, including interference to TV channels 2 through 6, residual noise to the AM radio bands and virtual loss of CB bands used by the many truckers who listen to his show. He says there are also privacy issues, especially the potential of the government and large companies to track people and their habits and choices on a BPL system.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V in Philadelphia.

--

Bell currently hosts the weekend edition of the Coast to Coast AM. He also indicates that his presentation on Saturday, March 20th was only round one. He is lining up other guests to talk about the BPL issues in the near future. To find out when, keep checking the shows website at www.coasttocoastam.com. (ARNewsline(tm))

**

THE BPL FIGHT: HAM RADIO VS. THE WALL STREET JOURNAL

Meantime, a story in a recent issue of the Wall Street Journal about Amateur Radio’s stand against BPL is raising the eyre off many in the nations ham radio community. The item appears to take the position that radio amateurs are alone in opposing BPL. Also, that their doing do is holding back the flow of progress in technology.

You can judge for yourself by taking your web browser to http://tinyurl.com/357ye. That is if its still there by the time this newscast goes to air. (ARNewsline(tm))

**

RFI: ELECTRIC BLANKETS - A NEW CHAPTER FOR AN OLD PROBLEM

As if BPL was not enough, now there's another source of RFI to worry about. Its things that keep us warm.

According to Roy Trumbull writing in the CGC Communicator, RF interference from electric blankets is another problem that can be added to a history of similar events. The ones caused by heating pad thermostats and the class of transformers used for door bells. Turnbull says that RFI from these devices can affect AM reception for quite a distance from the source.

Turnbull also adds this interesting aside concerning electric blanket safety. He says a little noted change in product design took place when there was that firestorm some years ago over magnetic fields from power lines. The electric blanket makers got a jump on things by switching to twisted pair wiring. This says Turnbull solved the problem of the significant magnetic fields that were produced by the earlier blanket design. (CGC)

RESCUE RADIO: REACT AND THE AMBER ALERT PROGRAM

Ham radio appears to be leaving itself behind in the area of responding to notices of kidnapped children called Amber Alerts. Meantime REACT and other citizens radio organizations are taking the point position in spreading word of these vital searches. Amateur Radio Newsline's Bruce Tennant, K6PZW, takes a look at how REACT has gotten involved:

--

Nobody seems to know why hams appear to have no interest in the Amber Alert program, but other civic minded radio services are not standing still. And the April issue of Popular Communications magazine is highliting REACT as being one of those jumping in to providing communications for these alerts and searches.

The magazines Info Central column highlights the activities of REACT teams across Ontario Canada and the northern United States. This, as they responded to an Amber Alert issued by the Ontario police after Cecelia Zhang was abducted in Toronto.

Ron McCracken who is past President of REACT told Pop Comm that they were given details of the alert and were asked to broadcast it on C-B channel 19 to truckers passing along the highways. The alert included details of the kidnap vehicle and the victim along with the suspects.

The broadcasts began at about 5:30 in the evening and went on through midnight. McCracken says that CB radio was combined with computers and e-mail to spread the word far and wide in a very short time. This allowed truck drivers all

along the border to keep an eye out for both the little Cecilia and her abductor.

According to McCracken, this was REACT’s first response to an Amber Alert and in his estimation it went very well. You can read the full story starting on page 5 of the April issue of Popular Communications magazine.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, reporting.

--

The Amber Alert was created in 1997 as a tribute to 9-year-old Amber Hagerman. She was kidnapped and brutally murdered while riding her bicycle in her hometown of Arlington, Texas.

If you want to know more about how you can start an Amber Alert Plan in your area and involve your radio hobby, it can be found by taking your web browser to www.missingkids.com. Then click on the words Amber Plan. (PopComm, ARNewsline(tm))

**

RESTRUCTURING: SAN MARINO AND NORWAY EXPAND 40 METERS

Two more nations have gained spectrum at 7 MHz. Both are in Europe. Jeramy Boot, G4NJH, in Nottingham in the UK has more:

--

Two more European countries have gained access to the 7100 to 7200 kHz segment of the 40-metre band. San Marino, T7, has authorised amateur radio operation in the 7100 - 7200 kHz band on a Secondary non-interference basis, with effect from the 25th of February.

The Norwegian Post and Telecommunications Authority has also announced that Norwegian radio amateurs can use frequencies in the segment 7100 - 7200 kHz with secondary status starting from the 1st of April.

This is in addition to the existing segment 7000 - 7100 kHz where radio amateurs have primary status. The maximum transmitter output power in the 7100 - 7200 segment will be 100 watts in Norway, and the maximum bandwidth 6kHz.

Jeramy Boot, G4NJH.

--

Croatia was the first European country to expand its 40 meter band. That happened last December. (GB2RS)

**

RESTRUCTURING: ARRL AND NCVEC PETITIONS ASSIGNED RM’S

Here in the U-S, our FCC has assigned rulemaking numbers to separate petitions for license restructuring and changes in code requirements filed by the ARRL and the National Council of Volunteer Examiner Coordinators. The ARRL petition

has been designated RM-10867 while the NCVEC petition is now RM-10870.

Two other petitions were released for comment at the same time - RM-10868 was filed by the Radio Amateur Foundation, and RM-10869 by Ronald Lowrance of Georgia. Both also seek changes in amateur licensing requirements, particularly with relation to the code exam.

All petitions are available online via the FCC's Electronic Comment Filing System website. The comment deadline on all four petitions is April 24, with reply comments due 15 days later. (CQ, W2VU)

**

ENFORCEMENT: WARNINGS TO TWO TRUCKING FIRMS ABOUT 10 METER OPS

The FCC has warned the owners of a Bristol Pennsylvania trucking company to get their personnel off of the 10 meter Amateur band or face some expensive consequences. In a letter to Cassidy's Express the FCC says that it has information that one of the company’s tractors pulling a "CAI" trailer on Interstates 476 N and 76W in Pennsylvania, was the source of unlicensed radio transmissions on the 10 meters.

The incident took place last October 9th between 8 AM and 8:30 AM local time. The Commission has informed Cassidy's Express that operation of radio transmitting equipment without a license is a violation of Section 301 of the Communications Act. That it could and will subject the operator to fine or imprisonment, as well as seizure of any non-certified radio transmitting equipment.

For those not aware, unlicensed operation carries a fine of $7,500 to $10,000 for each instance charged. A similar letter was sent to CLR Transport of Saluda, North Carolina warning of unlicensed 10 meter operation from one of their trucks on Interstate 85 between Gastonia and Kings Mountain, North Carolina on July 14, 2003. (FCC)

**

THE CLUB SCENE: USS HORNET ARC NOT DISBANDED

Contrary to rumors, the Amateur Radio club that supports museum ship U-S-S Hornet has not been disbanded. This, according to Tom McGlinn, KO6HA who is the trustee for the NB6GC callsign and the new president of the USS Hornet Amateur Radio Club.

Writing on the QRZ.com websire, McGlin says the original story of the club being dissolved is untrue. He says that the group is still active and aboard the USS Hornet and that all QSL requests will be handled as in the past. Please direct any inquiries concerning the USS Hornet ARC QSL program to ko6ha@earthlink.net (QRZ.com)

**

ON THE WEB: BIG UPGRADE AT QRZ.COM

The servers that provide you the QRZ.com website have been relocated to the company's hosting facility in Phoenix, Arizona. The new location affords QRZ.com with 24 hour a day, 7 days a week backup power and a very fast 10 Megabit connection directly to the Internet backbone.

QRZ.com owner and administrator Fred Lloyd, AA7BQ, gave special thanks to Chris Radicke, N7TWW and Mark Krotz, N7MK, who assisted him in transporting the computers, building the cabinet shelves, pulling cables, and in generally making the transition go as smooth as silk. Lloyd says that thanks to some great prepatory work QRZ.com was out for no more than 2 hours during the location changeover. (QRZ.com)

**

ON THE WEB: WWW.SCOTHAM.NET

WWW.SCOTHAM.NET is a new Internet portal concerning ham radio in Scotland. The aim of the site is to further the interests of Scottish hams in all aspects of Amateur Radio. The portal also presents an interesting view of life in Scotland as it pertains to ham radio. Again that U-R-L is WWW.SCOTHAM.NET and you will find it on the World-Wide-Web. (MM0DFV)

**

WITH THE HANDI-HAMS: 3905 QSL BUREAU

The Board of Directors of the 3905 Century Club has unanimously approved the establishment of a QSL Bureau and Manager. This, to support any Handi-Ham members that wish to participate in the club's nets.

Handi-Ham members can use the bureau a number of ways. This includes the actual completion of cards for the contacts they make on 3905 Century Club nets.

The 3905 Century Club has nets on four bands and all modes including SSB, CW and Digital. More information, including net schedules can be found at www.3905.com. (Handi-Hams)

**

CONVENTIONS AND HAMFESTS: ARRL AT NAB IN APRIL

Turning to the ham radio social circuit, the ARRL will be visible at the upcoming National Association of Broadcasters convention. Amateurs visiting the exhibits at the Las Vegas Convention Center are invited to stop by Lobby Booth 9 where the ARRL will be exhibiting its latest publications and other materials related to the hobby.

The booth will be staffed by ARRL national officers and volunteers from the Las Vegas area headed up by Bill and Carolyn Cornelius. They are K8XC and K9XC respectively. The booth will also be able to provide information on the April 21st NAB Ham Radio Reception sponsored by Heil Sound.

Bill Cornelius does have a limited number of complimentary VIP Exhibits Passes. Requests for them go by e-mail to k8xc@aol.com. (K8XC)

**

HAMFESTS AND CONVENTIONS: EMCOMMWEST IN MAY

And word that the combined EMCOMMWEST 2004 conference and the Reno Spring Hamswap is slated for the weekend of May 22nd to the 23rd. This years theme is Amateur Radio Emergency Communications in the 21st Century and will feature appearances by knowledgable guests that include Dan Miller, N-3-U-F-G from ARRL Headquarters. His presentation will include information on the ARRL Emergency Communications on-line courses as well as an overview of how amateur radio interfaces with The Office of Homeland Security.

For complete up to date information, location and on-line registration for EMCOMMWEST and the Reno Spring Hamswap, take your web browser over to www.emcommwest.org. Planners say that the site will be updated frequently with new information as it becomes available. (Emmcom West)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

EMERGING TECHNOLOGY: PROFESSOR SAYS ISP’S SHOULD POLICE CONTENT

A new cyberspace business plan from a legal scholar says that Internet Service Providers should become cyber cops and force everyone to pay a royalty fee for every song, movie or book they download to their personal computers. Bill Pasternak, WA6ITF, has the details:

--

Lon Sobel is a professor at Loyola Law School and an expert on copyright and entertainment law. He says that Internet service providers such as America Online and Earthlink must become digital police and send customers monthly bills based on how much copyrighted material they download.

Under Sobel’s plan, consumers who download expensive software such as Adobe Photoshop could pay as much as $600, while someone who grabs a single song could be charged as little as 49 or 50 cents. These charges would be in addition to the usual dial-up or broadband monthly connection fees.

Critics of the plan include computer experts, Internet service providers and -- believe it or not -- the entertainment industry. Bob Blakley, a computer scientist and security expert at IBM, says that a clever hacker could write computer code that would attaches itself to every piece of copyrighted content on the Internet. Then it could funnel some of the cost of the download to the hackers personal bank account.

Blakley and others say peoples attitudes is one of the biggest challenges in digital rights management . That an entire generation of consumers has become used to free music and other content posted on the Internet. He says that they will do anything it takes to get content for free. This includes breaking the law to avoid paying $10 to $20 for a compact disc, DVD or electronic book.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF

--

A senior executive at Verizon Communications is quoted as saying that Internet service providers will reject the plan noting that few companies could keep track of every downloaded item or determine the value of every file passing through their system. (Published news reports)

**

WORLDBEAT - CANADA: NEW CONTEST MANAGERS

Radio Amateurs of Canada has announced the appointment of Sam Ferris VE5SF, Bart Ritchie VE5CPU and Bruce Rattray VE5RC as managers for the Canada Winter and Canada Day contests. They replace retiring managers David Shipman, VE7CFD and the Moncton Seniors Amateur Radio Club who have performed this duty for the past several years. (RAC)

**

WORLDBEAT -NEW ZEALAND: NZART COUNCIL APPOINTMENTS

NZART President Peter Norden, ZL2SJ, has announced the appointment of Noel Rowe, ZL3GR, to society's Council. Rove is a second term councilor having served previously in the 1990's. He replaces Ted Minchin, ZL1MT, who resigned for personal reasons.

Another Council appointment is that of Joe Reed, ZL2AH who volunteered to take on the tasks of Reciprocal License Bureau Manger. He replaces the late Russ Garlick, ZL3AAA. (NZART)

**

HAM RADIO IN SPACE: K6DUE MEMORIAL ARISS EVENT QSL CARD UPDATE

Hams waiting for QSL cards from the K6DUE Memorial operating event, please listen up. Frank Bauer, KA3HDO, who is ARISS International Chairman says in order to save postage costs, the process being used for the special event certificates is this. The various regions such as Europe, Canada, USA, Russia and
Japan are collecting the QSLs and generating compiled lists of names and callsigns. These lists are then used to print the certificates and return them to the regions for direct distribution. Bauer asks that everyone be patient, indicating that it will be well worth the wait. (KA3HDO)

**

DX

In D-X, three German operators will be active as A35DA, A35DH and A35DJ from Fafa Island in Tonga through the 29th of March. Activity is on all bands from 80 to 10 meters on SSB, PSK 31 and RTTY. QSL as directed on the air.

Also, word that KE2SP is active on 10 through 20 meters from the island of Hydra. This, as SV8 stroke KE2SP. He will be there until the 15th of June. The island counts as EU-075 for the Islands on the Air awards program.

And the Ohio Penn D-X Newsletter reports that ZL1CT is planning to be active fro Chatham as ZL7V. This, from July 5th to the 15th. Activity will be on 80, 40, 30 and 20 meters using CW and SSB. QSL this one via N3SL.

(Above from various DX news sources)

**

THAT FINAL ITEM: A HAMVENTION 2004 RADIO ROAD INFORMATION SERVICE

And finally this week, if you plan to drive to this years Hamvention, there will be a special service to make your trip a bit more pleasant. This as Information Radio in Dayton, Ohio announces plans to provide Road to Hamvention announcements on Highway Radio 1610 AM. As you might expect, 1610 Kiloherrtz is the frequency and the person behind the idea is Norm Schrein, KA8PGJ.

--

Schrein" "For Hamvention, we are planning on putting some information in regard to directions to the Hara and hours of the hamfest itself. People coming into town can obviously get information via the ham repeaters, but we may be hitting people who aren't hams at all or who do not have Amateur Radio equipment but who will pick this up in the loop and take in the hamfest."

--

Information Radio is a service provided by the Emergency Communications Center Incorporated. This is a not for profit organization with which Schrein is associated. He says that stations like this are a lot more common than many people realize:

--

Schrein: "530 Khz is where to find a lot of the stations like this and then about 1610 through about 1700 Khz you will find a lot of these travelers information stations as well. A lot of them tend to be site specific. That is, if you go through Pennsylvania, you may hear something about one of the state or national parks or involving the roadways if its run by the Dept. of Transportation. Where ours is a little unique is that it is kind of all encompassing. It covers everything happening in the Dayton area from local parks and recreationb to people having a parade to events like the Hamvention."

--

Schrein says that anytime you are headed to the Dayton area be sure to tune your car radio to 1610 kilohertz. Whether its trying to find your way into town or heading to the HARA Arena for Hamvention 2004, Information Radio will

be there to serve you.

More information on information radio stations can be heard on this weeks Rain Report. Its at www.rainreport.com or landline at 847-827-7246. (ARNewsline (TM))

Boy you certainly know how to jump to erroneous conclusions. I work a full time job, which also entails travel further limiting my time. I found learning Morse to be no more of a waste of time than studying theory. They both take time and both are worthwhile.

The Bravo Sierra is yours, Leonard. Since you don't actually work with the
military anymore, you are forced to search things out on the net and hope
they are up to date. OTOH, I work IN the system and understand how it
ACTUALLY is quite well. I quoted from the FAR and you still sit there and
argue with me. What part of FACT don't you get?

Say what you want, but I have the EXPERIENCE with the contract and KNOW what
I'm talking about. All you have is an internet search tool, and "Old"
knowledge concerning how the aquisition system works.

It's no more a "monumental waste of time" than learning another language,
Dee...yet the same "arguments" against learning another language are employed
by those who just don't want to leanr Morse Code.

It'a actually easier to do, but then hey, they don'[t want to hear THAT,
either...

>Then just call them on the cell phone if you need to get through that
>bad! 8^)

Actually, you have just expressed the fundamental image problem that Amateur
Radio faces in the 21st century. Many people, including some hams, don't really
"get" what Amateur Radio is all about.

Here's my definition:

Amateur Radio is fundamentally about radio as an end in itself, rather than as
a means to another end.

Otherwise, might as well use a cell phone or email.

>
> Of course that's me. Does it make as much sense as *protecting* the
>newbies from High power RF by not allowing them high power, as compared
>to the alternative of giving them the knowledge?

It makes more sense to me that new hams have a sampling of all bands (I'd give
them a lot more HF/MF than bits of 80/40/15/10) than to restrict HF and allow
full power at "meat cooking frequencies" (tip of the hat to WK3C for that
phrase)

Which do you think is more common: hams on HF or hams running high power?

>>>In
>>>addition, given the results of the way the Technician license evolved,

>> a few people who clamored for a nocodetest license as the savior of amateur
>> radio. Hasn't happened.
>

> Perhaps you don't agree with my conclusion, but the propagation
>differences are pretty much demarcated between HF and VHF

All depends on the sunspot cycle. When the spots are down, bands as low as 15
become like VHF/UHF. At the peak, 6 is more like 10. A lot depends on your
operating time-of-day, too.

>>>It also makes for less of a class system.
>

How many of these petitions were actually filed by Technicians rather than people who purport to speak for them? Do the filers really know whether the Techs are happy with the current privileges. Afterall those who really wanted more privileges went ahead and upgraded.

Alun,

I did not suggest that *you* were advocating operations designed to
intentionally disrupt BPL.

However, I have seem some comments that, if they don't outright advocate it,
come so close
that the BPL spin doctors could clearly make them look so.

We do have a right to use our frequencies in legitimate ways that our
licenses permit.

All I am saying is that discussing - even if in jest - operations designed
specifically to disrupt
BPL are a VERY bad idea and will harm our cause.

I might have been wrong. Perhaps answering 90% of 911 calls is
acceptable practice in some localities. "Good enuf 4 Gubmn't Work."
Like the 911 operator that kept hanging up on "sniper" Lee Malvo.

We only

My e-mail letter to Mr. Brown:

73

Steve, K4YZ

QUOTE

Dear Mr. Brown,

While I found a great bit of interest in your article, you seem to single out hams a "quirky" over thier defense of parts of the spectrum.

BPL, or Broadband over Power Lines, will not only affect Amateur Radio operators. Depspite the proliferation of satellite systems for ships, the HF, or shortwave, bands still carry a large part of ship-to-shore communications.

Other organizations such as the Civil Air Patrol, still depend heavily on HF as a primary means of conducting emergency communications.

BPL also has the potential of creating interference up into the VHF, or very high frequency part of the spectrum, creating difficulties for certain police, fire and EMS communications, along with "unlicensed" resources such as cordless telephones, CB radio, and even baby monitors.

The proliferation of the power distribution network certainly lays a golden egg for those who see it as yet another service to sell for Internet users, but this golden egg is only plated...It tarnishes easily under scrutiny.

The problem is even further exacerbated when one realizes that much of the EXISTING power distribution infrastructure is itself aging and in need of repair or replacement...Every dirty or rusting cable or connection is yet another opportunity for compromise of the integrity of the signal applied to it, making the potential interference one of phenominal magnitude.

There exists, in the future, a potential to use some of the existing infrastructure for distributing the Internet to a wider customer base, but under existing conditions and circumstances is nothing but potential for great harm.

Thank-you for your time.

Steven J Roeson, LPN

>started.
>
The problem was that 220 isn't 2 meters.

Way back in the bad old days, Novices had 145-147 MHz privs. But they were phased out in the late '60s early '70s, just as amateur repeaters became very common.

> I was in SoCal when "Novice Enhancement" took effect, and one can hardly
>argue that there is a dearth of repeaters on that band in that region...even

That's because "everybody" was on 2 meters. Or 440.

Question me? Is >>>THAT<<< what *#*YOU*#* Call it?!?

Interrogation is more like it. And I've told you that time and again.

Get a grip, man.

That's why I think you're nuts.

Put away the sodium penethol and jumper cables.

It just isn't going to work.

You'll never make me love Morse Code.

> And so far all you've done is rum and hide from answering questions about
> YOUR assertions.

Yup, rumming and hiding.

>Like the 911 operator that kept hanging up on "sniper" Lee Malvo.

What "90%" Brain?

ALL of the 9-1-1 calls get answered where I live.

NOT all of the calls warrant a Code 3 response.

> We only
>> need one, maybe two on any call, if you allow for one being on the phone
>and
>> one on the radio...
>
>How does a citizen call a 911 operator on a radio?

Hmmmmm...there are several ways.

First of all is to use the autopatch if a licensed Amateur.

Second is to be an authorized user of the county dispatch network (which I
am)

Third is to...never mind...I could be at this all day...

But in the CONTEXT which I made the comment, one 9-1-1 operator handles an
RFS (request-for-service) on the phone with the RP (reporting party) while
another monitors the phone call and dispatches the appropriate assets.

Somehow I think you knew that, so I'll just cut your trolling line right
here.

You think I am nuts becasue I won't let you get away with stupid
assertions that you can't/won't back up with some valid facts.

>Put away the sodium penethol and jumper cables.
>
>It just isn't going to work.
>
>You'll never make me love Morse Code.

I don't care if you ever do or not. I'd just as well keep idiots like you
out of the narrowband parts of the spectrum.

I just want you to answer "What "major role" do the unlicensed radio
services play in "emergency comms", as you ahve suggested they do.

>> And so far all you've done is rum and hide from answering questions
>about
>> YOUR assertions.

Huh? She'll just waste your time.

Try this instead:

Snipped from ARRL site

"Visitors to French Polynesia must send in or bring in:

Copy of current Amateur License
Current passport
List of equipment brought with serial numbers
Copy of itinerary showing location from which they will be operating
Thanks to Bob, N1RA for this update:
Date: Thu, 22 May 2003 11:50:15 -0400
Subject: Fo0, French Polynesia

French Polynesia, FO0, Address: Cellule P & T du Haut Commissariat de
la Republique
(HCR-CPT)

BP 115
98713 - Papeete, Tahiti, French Polynesia

Telephone: 011 689 46 8630
Fax: 011 689 46 86 33
E-Mail : her.ept.jde@mail.pf [after July 1, 2003]

IMPORTANT: You must have an interpreter or speak French. They do not speak or read English. Correspondence must be in French also.

Personal notes from David Rosenthal, N6TST, February 2002:

Proceed to the High Commissioners Office in Papeete and ask for Mr. Sylvain Affinito (he was there in February 2002) in the office of the Celle PTT. He will examine your paperwork and have you fill out a form applying for your temporary permit. They should issue you an FO0 license either on the spot or by the next business day since the documents have to be stamped and signed by an approving official. This license will be good for 90 days, which is the maximum time a visitor may stay in French Polynesia. There is no charge for the license.

Note that CEPT Class 2 licenses, are NOT authorized in French Polynesia, i.e., there is no equivalent to a "codeless Tech" license there.

For Maritime mobiles sailing into French waters you must have a valid license to operate within the territory. Upon making your first port of call, simply call the PTT office with the above information plus the usual boat info. Your license can be preprocessed and if you call back the next day he will give you your call letters and you can pick up your license when you reach Tahiti.

Phone number for this PTT is 46-86-32, the fax is 46-86-33

Phone cards are now needed to access pay telephones and these cards are available at most stores. They cost XPF 1,000 (about US$8) but you can also use a major credit card in the phone.

The correct Celle PTT office is HARD to find in Papeete (there are several) and few people know anything about amateur radio. Streets in French Polynesia are poorly marked and address numbers virtually unknown. Basic maps, however, are available free from tourist brochure displays located in most stores. I've also included my own map showing the exact location of the Celle PTT office.

Follow Avenue Bruat inland to where it ends at the entrance of the Gendarmarie, a large police compound. Turn left before entering the Gendarmarie gate and follow the small street about 100 feet or so where you'll find a driveway entrance to what appears to be a two-story apartment building. The Celle PTT office is the last one on the ground floor and has a blue sign with white script lettering above the door reading "Cellule des Postes et Tï¿½lï¿½communications."

Thanks to David Rosenthal, N6TST for this update.

Additional comments: "Having experienced considerable difficulty
locating the PTT office in Papeete (Tahiti), I added correct street
directions to find the right building as well as producing a map
graphic which I included as a JPEG with this message. This map, though
small, can printed out and easily matched to many readily available
free maps on the island. Perhaps you could paste it into the page as
well since that might be the best way for folks to find their way to
the office. Anyway, I hope you find this helpful and, if I can answer
any questions or provide more information, please feel free to contact
me either via e-mail or at 760 939-5467."
For more information, contact the French Polynesian IARU."

> OIther than that, I've pretty well got you and Lennie by the cajones...As
> hard as it is to hold on to something that small.

See what I mean? Brittany could fall into your lap and you'd just be
thinking about some guys reproductive equipment. Huge waste of time
in my book.

>
> What "interpretation" did YOU make, Brain?

I put interpretation in "" because it is a literal reading of the
rules. Everyone else who has taken me to task calls it an

interpretation.

> The FCC itself has issued several "clarifications" on these very specific
> topoics that you've cited here. What interpretation was left to be made?

You must post those at once or you are a liar. You have 12 hours to
do so.

> >2. Administering a Farnsworth exam when Part 97 clearly states "Morse
> >Code."
>
> There is no such thing as a "Farnsworth" exam, Brain.

Then no dash-dot exams have been given by the ARRL VEC since 1988.

Which is it? Has the ARRL given dash-dot exams or haven't they?

Huh? Huh?? Huh???

> >I don't make the rules, and I don't take it upon myself to interpret
> >workarounds to what Part 97 states.
>
> What "workarounds"...?!?! The FCC had already "interpreted" the specific
> items you've mentioned in this post, Brain.

Then it is imperative that you post such documents.

> Or are you simply voicing your disagreement with thier position on those
> specifics?

Their position is stated in Part 97. Even though you think it may
take many libraries to hold all of the content of Part 97, you might
try embarking on such a reading journey. It might take you the
remainder of your natural life to get through it all, but it is worth
the effort.

Hey, I managed to get through it, and so can you.

> >I leave that sort of work to the experts on RRAP and the FCC.
>
> The "experts" in RRAP are one thing....

Correct. They are one thing, one mind, lock step.

> The FCC staffers, on the otherhand, >>ARE<< the "experts". Even your
> "mentor" says so. Do you disagree?

>>>SORRY<<< to BUST YOUR RANT!!!

That is why I deferred to their document when Arnie asked me to
provide a workaround to the monetary rule. I cannot do so.

Poor, Steve. The RRAP Bully now thinks he's being picked on and
suckered into looking foolish and behaving badly. It's just so very
unfair.

>
>I put interpretation in "" because it is a literal reading of the
>rules. Everyone else who has taken me to task calls it an
>interpretation.

I have no "task" to take you to over Part 97 rules.

They are pretty clear. Not a whole lot of "interpretation" required there. You either do (or don't do, as may be the case) what they say, or be held liable for fines.

>> The FCC itself has issued several "clarifications" on these very
>specific
>> topoics that you've cited here. What interpretation was left to be made?
>
>You must post those at once or you are a liar. You have 12 hours to
>do so.

I didn't post them in the first place, Brain.

They were not assertions of mine.

There ARE public resources to validate the FCC previous "positions" on rulings. I suggest that you use them.

On the otherhand, YOU are the ONLY person who can "validate" assertions YOU make. And "we" are still waiting for you to answer the question "What "major role" in "emergency comms" do unlicensed radio services play...???

>> >2. Administering a Farnsworth exam when Part 97 clearly states "Morse
>> >Code."
>>
>> There is no such thing as a "Farnsworth" exam, Brain.
>
>Then no dash-dot exams have been given by the ARRL VEC since 1988.
>
>Which is it? Has the ARRL given dash-dot exams or haven't they?
>
>Huh? Huh?? Huh???

The VEC's have not administred any "dot-dash" exams, either.

They have, however, administered thousands of Element 1 Morse Code tests.

These tests were administered in accordance with FCC parameters and
approval.

UNLESS, of course, you can provide some reference to some FCC rule or
regulation that mandates a "Farnsworth" test or a "dot-dash" test...?!?!

>> >I don't make the rules, and I don't take it upon myself to interpret
>> >workarounds to what Part 97 states.
>>
>> What "workarounds"...?!?! The FCC had already "interpreted" the
>specific
>> items you've mentioned in this post, Brain.
>
>Then it is imperative that you post such documents.

Which documents would you like posted, Brain? A simple Google search for
"Part 97" or "Amateur Radio Rules" will deliver tons of links to FCC comments
on the topic, and since they will come from a third party, it will deny you or
Lennie the opportunity to claim I either "editied" the find or drew solely upon
ARRL resources to provide them.

>> Or are you simply voicing your disagreement with thier position on
>those
>> specifics?
>
>Their position is stated in Part 97. Even though you think it may
>take many libraries to hold all of the content of Part 97, you might
>try embarking on such a reading journey. It might take you the
>remainder of your natural life to get through it all, but it is worth
>the effort.

The FCC has issued many "interpretations" on "pecuniary interest" since I
was first licensed in 1972, from "absolutely not", to "It's OK under these
restrictions..."

Do you REALLY need over 30 years of FCC comments to wade through?

You can't even handle ONE question asked of you in the last hour...How are
you going to proceess THAT amount of data...?!?!

>Hey, I managed to get through it, and so can you.

I have noting to "get through", Brain...I just don't use Amateur Radio to make ANY business related communicaitons. Period. What anyone else does is at the peril of THIER license, not mine.

>> >I leave that sort of work to the experts on RRAP and the FCC.
>>
>> The "experts" in RRAP are one thing....
>
>Correct. They are one thing, one mind, lock step.

If you think that, you've not been paying attention.

That you and I are at odds is living proof of that.

>> The FCC staffers, on the otherhand, >>ARE<< the "experts". Even your
>> "mentor" says so. Do you disagree?
>
>>>>SORRY<<< to BUST YOUR RANT!!!
>
>That is why I deferred to their document when Arnie asked me to
>provide a workaround to the monetary rule. I cannot do so.

What "rant", Brainless One?

Do you disagree that the FCC staffers are the defacto "experts" on radio regulations?

Yes or no.

Brain, it's obvious that getting your nose rubbed in your own newsgroup excrement is beginning to cause you to act in an unstable manner.

I am sorry that you find it offensive that you are being required to take responsiblity for your own actions, but most of us ARE required to do that...or at least expected to...

That you were not rasied that way is not my problem. But you are over 18 now and it IS expected of you.

That you are incapable is obvious.

There's no "rules" here, Brain.

You simply made an assertion which was, on the face of it, false.

It was obvious to anyone who is actually INVOLVED in ANY aspect of
"emergency comms", but since you've made a point of trying to claim you DIDN'T
say it when in fact you did, well, I justr could't pass up the opportunity to
rub your nose in it.

The end result is that you've stretched out a personally embarrassing
whomping that you could have ended almost as soon as you started it by just
adding "in my opinion",.

Of course you could have provided us some sort of reference that actually
validated your assertion, but you and I both know that THAT wasn't possible.

So...here we are, two weeks later, and you've made a complete and utter fool of yourself trying to squeeze out from under the rock that you got yourself under.

And for what?

What the HECK is a dash-dot exam?? They have NEVER given dash-dot exams. They've only given Morse code receiving and/or sending exams as far as I am aware of. Since it is far easier to copy using Farnsworth spacing at 5wpm than other spacing methods, that is what they use.

Bash obtained the material in his books by methods that were unethical and arguably illegal at the time.

Bash's actions were the equivalent of sneaking into a teacher's office and copying tests before they were given, then selling the copies.

> Oddly, no one seems to bash
> the ARRL for publishing essentially the same sort of material
> long before the Bash company did its thing.

That's because ARRL obtained its material through proper channels. FCC published a study guide of questions that indicated the mateiral that would be on the tests (but not the actual Q&A), and ARRL reprinted it, along with other information useful to someone seeking an amateur radio license. All with FCC knowledge and approval. In fact, the License Manuals explain the source of the study guides.

Bash obtained his materials by other methods, and his books did not explain how the material was obtained.

In a way, buying a Bash book was akin to receiving stolen property.

I'll take that to mean you do not support the "signed statement" idea, Carl.

What's interesting about the NCVEC proposal is that if you remove the "signed
statement" bad idea, and the "no homebrew/30 volt final" bad ideas, and the
"additional unnecessary widening of the phone bands at the expense of CW/data"
bad idea, and the "special beginner callsign" bad idea, you wind up with a
proposal that's pretty darn close to the ARRL one. (Yeah, I know about the 5
wpm for Extra thing)/

Personally, I think many of the provisions of the NCVEC proposal actually
insult beginners.

I use a chart when using an unfamiliar band. The concept that you can
operate
whatever mode you happen to hear on whatever frequency doesn't always
work. Like on 80 and 40.

Sure. Just like Ohm's Law and such. In fact I regularly take practice exams online just to make sure I'm up on the current rules.

To make it more of a sporting course, I don't allow myself a calculator or even scratch paper. One time I passed the Extra in seven minutes thirty seconds just to see if I could.

>> >Better to know the person can read
>> >and use the frequency chart because it does change over time.
>>
>> See above.
>
>We disagreee then on that.

The main point is that if you start accepting the idea of lookup charts for the subbands, why not formula charts for the theory? Or a copy of Part 97?

You don't have to go down that road very far before a case is made to allow a copy of "Now You're Talking" or its equivalent at the exam session.

As do I. Additionally, as we have all seen too,
band edges for modes of operation can and do
change. Memorized spectrum or band edges
by mode today may not be accurate tomorrow.

> The concept that you can operate
> whatever mode you happen to hear on

Formulas don't change over time. Band edges and modes sub-bands
have a long history of change.

> You don't have to go down that road very far before a case is made to
allow a
> copy of "Now You're Talking" or its equivalent at the exam session.

Did you memorize logaritms tables? Just because you were
allowed a table of log values (or tables for sine, cosin, tan, etc)
didn't force the instructor to allow a full open book testing
scenario.

I look at band edges, as the same as speed limits. Drivers
aren't expected to memorize speedlimits and hams need
not memorize band edges (or intra-band mode limits by
frequency). Drivers are expected to follow "posted"
speed limits. Hams should have a current frequency chart
available to them to stay informed. If a ham operates
frequently on 40m, that ham will eventually know the
mode limits by memorization,,,but I see no need to
memorize ALL mode/frequency limits.

Cheers,
Bill K2UNK

>> Oddly, no one seems to bash
>> the ARRL for publishing essentially the same sort of material
>> long before the Bash company did its thing.
>
>That's because ARRL obtained its material through proper channels. FCC >published a study guide of questions that indicated the mateiral that would be >on the tests (but not the actual Q&A), and ARRL reprinted it, along with other >information useful to someone seeking an amateur radio license. All with FCC >knowledge and approval. In fact, the License Manuals explain the source of >the study guides.

The Church of St. Hiram is sacrosanct, can do no wrong.

>Bash obtained his materials by other methods, and his books did not explain >how the material was obtained.

So did the Q&A book folks.

>In a way, buying a Bash book was akin to receiving stolen property.

Poor baby. You are mad as heck and you can't stand it anymore!

Take Bash to civil court then, nothing stopping you from trying.

Avenge all foes! Sound the hue and cry!! Love the ARRL!!!

That done, maybe you can fight against "J. K. Lasser's Your Income Tax" annual publications.

I really think you ought to review Title 17, USC, Copyrights. If you do, you will find that the United States government cannot copyright its own works. That's been in the United States Code for quite a while. The ARRL did not need to "seek any permission" for republishing any FCC public material. They still don't need to, just repro it and mention the source. No fees, nothing. Anyone can.

There's a legal area that is a "grey area" for many on what constitutes "ownership" of test materials. I'll leave that up to attorneys and judges to thrash out...not to omniscient wanna-be gurus who spout off on everything because they have an Extra license and are good at morse code. :-)

>You've waved your "professional" credentials here innumerable times, but you >can't tell us how to convince FCC of something that's blaringly obvious to >even us poor dumb amateurs.

I'm sorry to hear you have such a low self-image.

You can't bolster that low self-image by attempting to force others into answering your questions...those usually a set-up for an expected reply...:-)

But, on the thread SUBJECT...the FCC cannot directly stop Access BPL. It doesn't have the direct legal authority to do so. All the FCC can do right now is to set standards on the levels of incidental RF radiation from an Access BPL system. That is what NPRM 04-29 is all about.

So far, literally thousands of amateurs have complained bitterly about Access BPL to the FCC on proceedings 03-104, 04-37, and 04-29. They've demanded that the FCC "stop" it. The FCC cannot "stop" it. All the FCC can do is set standards for incidental RF radiation from Access BPL systems. Very, very few, if any, amateurs have suggested ANY levels of such RF radiation limits other than zero as in stopping Access BPL entirely.

Since the FCC has NO power to "stop" any Access BPL now, the thousands of amateurs complaining about it aren't going to be at all effective in stopping it. All that proceedings 04-37, 03-104, and 04-29 in the ECFS are seemingly good for is a place to vent steam generated by whatever frustrations all those thousands of amateurs must have.

Anyone who really wants to "stop" Access BPL would have better luck contacting their federal congressperson or senator and tell Congress to stop it. The FCC doesn't have the legal power to stop Access BPL; all the FCC can do right now is to set regulations for incidental RF radiation levels.

I've made my comments on all three proceedings. That's in the public record. Maybe it is effective, maybe not. The point is that I and all of us can DO it. We have the direct input to the FCC and the congresspersons have web addresses and postal addresses. I am NOT going to do anyone's work for them. I sure as heck can't tell anyone in this newsgrope what to do, can I? :-)

Besides, argumentative one, you've implied so many times that you "know" what the FCC thinks. That's a key to get them to "stop" Access BPL, isn't it? Why don't you spread around that information for all to share? Show your dedication and committment to the "amateur community."

Actually, I'm working for a company that is contracting to another
company who has a contract to supply electronics for the DoD.
Not full time. But the MIL STDs of many kinds are in both places
with many different dash number "Mil Specs" called out.

Note: "Mil Specs" is an old term for MILITARY STANDARDS of
many kinds, informal. They have all sorts of effective dates to
them but I'm trusting another to keep them all current and also do
all the bookkeeping on checking document call-outs, to see we
all have the standard specified on-hand.

>OTOH, I work IN the system and understand how it
>ACTUALLY is quite well.

Okay, tell us which ring at the Pentagon your office is located and
I may get a chance to look you up...

>I quoted from the FAR and you still sit there and
>argue with me. What part of FACT don't you get?

My organization didn't get that particular document so I can't
verify it. :-)

I'm sure that you need only imply you always tell the truth
in here and that is the Final Word. :-)

>> Do you know what COTS is? Ask around. Don't sleep on the job.

COTS = Commercial Off The Shelf.

Been around for over a decade now. It applies to specialized things
such as the three principal ICs found in the R/T for the AN/PRC-119.
ITT and GD make a quarter million of those sets between 1989 and
2003. It's the standard small-unit (battalion and down) radio for U.S.
military land forces.

>> >COR on a 6 million dollar contract.

>Say what you want, but I have the EXPERIENCE with the contract and KNOW >what
I'm talking about. All you have is an internet search tool, and "Old"
>knowledge concerning how the aquisition system works.

Righto, Col. Steve Austin, your bionics make you superior everywhere.

"Millions" in contract awards have been awarded since WW2. The
dollar amounts, normalized for the COLA, serve only to indicate the
size of a particular project. That's a manager and bean-counter
thing; us folks with the dirtier hands concentrate on the works of a
project in order to fulfill a contract.

>New stuff, Leonard. Doesn't even remotely resemble what you did in 1955. I
>gave you the web site to research. What, did the BIG words stump you?

"BIG" is also an acronym now? [what will they think of next?]

Supercalifragilisticexpialidocious? Antidisestablishmentarianism?

I'm working with HEMT, PHEMT, and GaSP devices. For radio
purposes...and some of that will bleed over to WiFax, one of the
IEEE 802 standard systems for broadband (it ain't "Wi-Fi" but one
of the families within the standard). DoD will own the plans per
terms of the overall contract, but the techniques and notebook
data aren't owned by da gubmint.

Now you shoulder your FAR away VTC and bravely defend the
Homeland Security by shouting and hollering your magnificence
in this newsgrope. That means all of us on the project can
finish and get final payment.

>You don't have the brain power to have any ammo of consequence, Leonard.

Whatever you say, Steve Austin. :-)

You are the one with morse code expertise and the bionic VTC.

We will all sleep safely on our COTS at night knowing the USA is
guarded by such knowledgeable superiors.

> arguably illegal at the time.

Ditto my last.

> Bash's actions were the equivalent of sneaking into a teacher's office and
> copying tests before they were given, then selling the copies.

Not at all. Itwould be the equivalent of a techer using the SAME
test questions over and over again and in recognition of same, a
frat house eventually compiles a list of those questions based on the
memory of those frats that had taken the tests before. Nothing
about what bash did is equivalent to sneaking into the teacher's
office.

> > Oddly, no one seems to bash
> > the ARRL for publishing essentially the same sort of material

Of course! if there are no limits, then we'll have a few hams trying to
use broadcast station powers.

Yes, but that old inverse square law coupled with the hidh voltages
being on the equipment that the ham operates means that they are the
most likely to suffer harm.

>>>>Just like cigarette smokers.
>
>>>Cigarette smoking is much more hazardous than RF.

Wrong part to make the analogy from. A long time ago when I originally
made the analogy, I was addressing the 'guvmint's proponsity for
protecting us from ourselves.

> full power at "meat cooking frequencies" (tip of the hat to WK3C for that
> phrase)

I cooked a little bit of meat on my finger one day with somewhere
around 50 watts power. People concerned with this should collect stamps.
My point is that 50 watts can hurt you, so if you are worried about
safety, you better lower it below that, and not cap it at 100.

Safety note addendum:
I just read the part of the ARRL 2003 handbook regarding RF and
electrical safety. Those who want to limit the voltages on the finals

better lower that nomber to 24 volts. Chapter 9 page 19 is my reference.

After all they only have safety in mind, gotta protect the newbies!

> Which do you think is more common: hams on HF or hams running high power?

Of corse there are more hams on HF.

>>>>In

>>going to use that!
>
> Funny, I've never run into that. If someone told me a repeate was private, I'd
> simply say it's not in the book and try a different freq.

Sure, and that's what I did. My point is that just because you don't
hear anyone on it doesn't mean there aren't hams that "might" use it.

>

I don't know that any of these petitions are sponsored by Technicians
or Novices. Seems to me that this started when the requirement for
Element 1 testing was made voluntary, and all the worms started crawling
out of the woodwork so to speak.

All the proposals were made by Extras, AFAIK.

I don't find the subband charts to be a slippery slope thing at all. I
look at them as guide or a map that I use to keep myself in the right
area. If I'm in a contest moving frequencies all over the place, they
are a good thing to look at so I'm sure I don't go where I shouldn't.

> You don't have to go down that road very far before a case is made to allow a
> copy of "Now You're Talking" or its equivalent at the exam session.

I disagree. I have charts all over my walls. Some of them are operating
aids, like my subband chart, a USA grid square map, and the PSK
suggested frequencies. Those are real time lookup tables so to speak,
and memorizing them does not make me a proper ham, like learning part 97
or safety or theory.

> Those days left with Jimmy Carter's administration.

Y'know, you're right.

Until Carter got in, the Chairman was Dick Wiley, an extremely knowledgeable comm lawyer who could understand things technical without any problem and knew what the Commission was supposed to do. Very impressive.

Carter replaced him with Charlie Ferris, Tip O'Neill's bag-carrier, in a patently political payback. Ferris brought in the economists and the consumer-ists for top management and policy-setting positions and the slippery slope started.

In the Reagan-Bush_I years that followed Carter, there were a succession of lightweight Chairmen epitomized by "Madman Mark" Fowler, a comm lawyer who couldn't get a significant law partnership after he was replaced by Reed Hundt - the guy who took the field apart because he didn't understand what enforcement was all about and why the agency had to do it - when Clinton got in. Hundt was followed by Bill Kenard, whose greatest achievement was to make the spectrum auction system work. Bush_II brought us Michael Powell, the cheerleader of BPL.

And Jim wonders why I'm embarrassed ??

> that, as small as they must be) is in the provrbial vise.

Those darned provrbial vises.

> And they obviously ARE being squeezed, because you keep hollering at me.

Ooh, Ouch, Ooh, Ouch!

No, no, not the jumper cables.

The LPN of Torture is putting it to me. Ooh, Ouch.

hihi

You're nuts.

I don't know if Lee Majors can behave that badly, even if he's just
acting.

About the other one, I have no doubt.

Maybe they can do something with the "Good Cop, Bad Cop" routine, but
with ham radio instead of police work.

All I advocate is that we excercise our privileges. As Phil points out, the law is on our side. For the record, I only have a 600W linear and it doesn't even work!

From a serious angle (and you can start a new thread if you really want to play ostrich and bury your head in the sand!) we do in fact need to demonstrate what 1500 W at close proximity will do to BPL. If in fact it does wipe it out (which wouldn't be surprising, but which we don't really know for sure) then Mr Powell really does need to find that out, and sooner rather than later. It can't do us the least bit of good for the FCC to discover that only after BPL has been rolled out nationwide. Intervening to bring those circumstances about before that is not intentional interference, at least not from a legal point of view. The right word for it is testing.

Ham radio was never intended for eveyone. Yet, today everyone wants it to conform to thier wishes. Of course I don't give much creedence to the "new" testing scheme. You can flash card an idiot and they can pass any exam. The commercial radiotelephone license has been this way since the 70s that I know of. Of course all testing has been prosituted in the name of "convience".

I disagree. I consider it to be valid testing. The ARRL has been active in looking at what would be radiated by UPL, but those who propose it don't care about that. If, OTOH, it can be shown that BPL falls over when exposed to licenced services, they will care about that. Our position is stronger now than it would be with millions of entrenched BPL users in place.

Seems rather inconsistent with his current policy though. Since Patriot Act II peeled through, I see more of a totalitarian agenda from Capitol Hill that, in good keeping with dictatorship policy would stand to lose by widespread high-speed internet access. Of course, when you have a population as stupid as the American populace I suppose it really doesn't matter after all. I fairly sure that there are some Americans somewhere waving their flags about this BPL news, as they do for anything the government tells them to.

Then you should know that if the product (or service) cannot be obtained
commercially, even the components should be commercial or adapted for
military use. As you know, many "commercial" products already meet or
exceed what we would commonly refer to as Milspec.

> Note: "Mil Specs" is an old term for MILITARY STANDARDS of

The FAR is the Federal Aquisition Regulation (15 and 42) and the DFAR is the defense version. If you are a contractor and or sub-contractor on a government contract, you are required to be familiar with it. Seriously, you might want to tell your employer to supply you a copy since you and I both are bound by what it says.

I'm quite familiar with the term COTS. I didn't respond because it was a moronic question to ask someone who works in the system.

And as the COR, I make sure that you do.

The COR (Contract Officer Representative or COTR (technical added)) IS the
person in the weeds, Leonard. We surveille, inspect, rate, and coordinate
with the contractor concerning every aspect of the contract for the CO. The
6 million dollar contract (for which I am still the COR) extends over a
period of 2 years. We are only 3 months into it at this point, and have
just completed our first quarterly performance rating for them. They did
quite well.

Broadband doesn't always mean BPL. You are getting confused here.
Broadband can be via cable modem such as I just signed up for or even via a
wireless system. Do not assume that the term Broadband, when used alone,
means BPL (Broadband over Power Line).

I saw the news clip and BPL was not mentioned, only Broadband.

In the case of RF, it's distance to the antenna. Which may be closer to a neighbor than the ham himself. PArticularly at VHF/UHF where the gain of even a "small" directional array can be over 10 dB. Pump, say, 500 W into a 432 MHz array with 16 dB gain...

Oh, OK.

Is that really a bad thing, in the case of cigarettes? The data clearly shows the health effects. And remember that those health care costs wind up being paid by all of us, in a variety of ways. Smokers and nonsmokers don't pay different Medicare/Medicaid taxes nor get different benefits. Etc.

OTOH, there was a report from some Eastern European country (Czech?) a while back that touched off a bit of a scandal. Said that smoking was actually *good* for their benefits system because, while it raised the health care costs, it also reduced the life expectancy so much that the reduction in old-age pension payments more than compensated. Of course their health care costs are much lower than in the USA.

>>> Of course that's me. Does it make as much sense as *protecting* the

As one of the endangered species of fiscal conservatives, I wonder how
this will be funded? There are large parts of the country that will
require many many miles of fiber to reach one family.

If a ham punches in 911 on his or her HT on our local repeater system,
the call will indeed be patched into the local 911 center.

But will a device that meets Part 15 "30 meter" specifications interfere with
BPL? I don't think so.

If we buy foriegn made fiber cable, we can borrow the money back to pay the
rest of the bills. This could be "self-funding".

I think Lennie is making more assinine statements without the knowledge to back it up.

One of the repeaters in my area also responds directly to a 9-1-1 input on DTMF. No other "access tones" or anything else necessary...Of course you get the 9-1-1 operator for that prefix, but it's a 10 second delay awaiting the hand-off.

Once again, Lennie.......

Ya PUTZ!

What for...by your own statements you admit nothing
was done by the FCC? The fact that one or more
FCC attorneys may have wanted action taken doesn't
validate anything other than those FCC folks that
wanted action couldn't convince their management
that the case either had merit or was worth the time
and expense.
.
All the academic discussion of what may have been
the legal outcome had Bash been challenged means
nothing in the end.

Cheers,
Bill K2UNK

In the last four years, I have seen you post exactly THREE posts that I would classify as "real discussions", Lennie. The last one being this past week on the importance of filing comments with the FCC on BPL.

The rest are your ususal smatterings of rhetorical antagonism, spiced with profanity and "personal perjorative".

Same Putzy Lennie...

I wonder, Lennie...In as much as you are not a licensee, HOW were you able to ascertain that Brain is a "good ham"...?!?!

The only way to know for sure is to "work" him on the air.

And based upon his avowed "padawan" status to you and his obvious inability to tell the truth, I'd be reeeeeeeeeeeal shy about stating how "independent" a "thinker" he is. So far he's got the Lennie-the-Liar program down to a science.

> You thoudn't be thuch a thinker.

Let's change one or two letters and see if we can come up with one about LENNIE.....

You (s)houldn't be (s)uch a (s)tinker.

Yep! It worked!

Welp, we had a sailor on here long ago who insisted that everyone else
devote as much time as it took to learn the code or stay the hell out
of ham radio.

Where did he learn the code? The Navy taught it to him while he
earned 3 hots and a cot, plus a paycheck.

I work a full
> time job, which also entails travel further limiting my time.

So did I at the time I was learning the code. Lots of frustrating
work.

Payoff? I don't use it.

I found
> learning Morse to be no more of a waste of time than studying theory.

I do. So much so that I used the description, "monumental waste of
time."

They
> both take time and both are worthwhile.

Not to me.

I don't... I view broadband as large quantities of data accessed in short periods of time.

What really needs to be done is at the point of end of the line, simply go with RF. Works for cellular quite well. Small low power 'nodes'. Linked by fiber and/or wire. No RFI, better security, and a dang lot easier to run and keep working.

BPL will be a god send for the FBI. All they will need to do is plug in and
listen. Probably won't even need a piece of paper. Since its all over the
HF spectrum anyway. So much for secure connections. Now do you all
understand what is REALLY going on?

The danger in that is a repeat of the fiasco that occurred at the
height of the unlicensed CB enforcement problem.

The Commish' was asked by The Congress what its most costly field
enforcement problem was. The reply was "tracking down and citing
unlicened CB operators". The result was ordering the Commish' to
drop the license requirement and changing the law to allow such.

Poof -- the problem went away. Instantaneously.

Let's hope that the same "instantaneous solution" method doesn't
happen when ham HF signals are intercepted by BPL users and the
complaints start flowing to the Commish'.

One has to ask the question of what the FCC gets out of requiring code
for extras. As the
treaty requirement is now gone, and no other service uses it, why
bother. The FCC isn't
in the business of giving out gold stars for the hell of it. Code isn't
a lid filter, as witness
14.313 back in the days of 13wpm to be allowed to operate there.

That's what someone did in rural eastern Oregon to cover a 600
square mile area - lots of non-licensed low power Part 15 "Wi-Fi"
nodes. Off-the shelf low-cost equipment for both the provider and
the subscriber and no communication interference problems.

In article <20040328090712.18008.00000510@mb-m06.aol.com>, k4yz@aol.com (the paralegal gunnery nurse) rants, raves, and writes:

>> But, on the thread SUBJECT...the FCC cannot directly stop Access
>> BPL. It doesn't have the direct legal authority to do so. All the FCC
>> can do right now is to set standards on the levels of incidental RF
>> radiation from an Access BPL system. That is what NPRM 04-29
>> is all about.
>
> Sure it can.
>
> The second a complaint is filed by an FCC licensee they ahve the
>authority to stop it.

To "stop" WHAT? There's NO Report and Order from the FCC saying that Access BPL exists per se. If the proposed rulemaking given in NPRM 04-29 becomes an R&O, then it has a specific definition in terms of incidental RF radiation levels.

Right now, the FCC regulations on incidental radiation devices, Part 15, Title 47 C.F.R., simply acknowledge devices that radiate RF and include maximum signal levels. There are limitations on the FCC's "stopping" power since they must investigate interference claims first in order to determine unspecified or unidentifiable sources of such interference. There are NO "radio police officers" at the FCC, just an Enforcement Bureau which may or may not ask for U.S. Federal Marshals to be the "police officers" accompanying FCC investigating agents.

There are NO widely-distributed public documents on the technical details of any of the Access BPL systems currently undergoing tests. There are NO specific details available on the incidental RF radiation signal levels from any of those Access BPL test sites. The FCC doesn't have any. The ARRL has only some audio and video examples for download. Access BPL proponents have NO specific data for public release other than a lot of PR BS. NO radio amateurs have done any quantitative calculation or modeling to simulate the actual Access BPL test installations' levels.

Further, the FCC is NOT "in charge" of approval or disapproval of Access BPL as a system despite what a lot of commenters on three ECFS procedings think. All the FCC can do is regulate the amount of incidental RF radiation from the system. Right now, NOBODY, probably not even the proponents, have any real numbers on those RF radiation levels. Until someone comes up with those real numbers from real tests done by real instruments

at real sites, all the complainants are shouting and hollering in the dark, posturing and ranting like so many did during the McCarthy communist witch hunting during the 1950s. Federal law on technical subjects requires actual information that can be incorporated into that law. Until then all of the fuss and furor, the fist-shaking and shield-waving, posturing, and epithet-throwing, threats of "action" is just a lot of silly, ignorant BS tossing.

In NPRM 04-29, the FCC is asking for DATA to use, just as they did in NOI 03-104. I don't see any of that data.in 5,956 documents of three proceedings in the ECFS. Show real numbers.

Kind of spoils all your ranting and posturing with reality of the situation, doesn't it? Tsk, tsk.

That's an excellent thing for your local repeater. It isn't a national
standard among U.S. amateur radio repeaters, de facto or de jure.

The 911 combination IS a national standard for all telephone ESSs
in the United States and is accounted for in all number
combinations used in signalling and dialing in the telephone
infrastructure.

Your repeater's "patch" connects to the telephone infrastructure.
As such, amateur radio enables connection to an emergency
center...through the telephone system. The "patch" is entirely
voluntary and not universal.

So, if a product isn't available commercially, the commercial
product must be used anyway? :-)

Makes for very lightweight products. Those would have lots of
things not there. :-)

>As you know, many "commercial" products already meet or
>exceed what we would commonly refer to as Milspec.

They do? Gosh. All this time thousands of design engineers
have been "wrong" according to His Majesty with the bionic VTC!

Thanks for the heads-up.

>The FAR is the Federal Aquisition Regulation (15 and 42) and the DFAR is the
>defense version. If you are a contractor and or sub-contractor on a
>government contract, you are required to be familiar with it.

I am? We are? I suppose. That's what the "bean-counters" are
for, Arnie. Not my area. I'm intimately into the product itself
and its very specific specifications. We are very familiar with
those specific specifications.

The managerial levels and the accountants can handle the
administrative details. Us design folk aren't required to be legal
beagles sniffing out things in the financial-contract half of an
award, just the engineering-contract part of it. [those specific
specifications mentioned]

>Seriously,
>you might want to tell your employer to supply you a copy since you and I
>both are bound by what it says.

My contractor, not my "employer." There's a difference, but the
difference is a petty detail that you Pentagon lords of the Rings
don't bother with. :-)

I'm not worried about the contract administration tasks. So far,
to the best of my observation, no contract regulation has ever
been able to communicate by radio, search for a submarine, or
test out another electronic unit. Maybe you know of some
contract document that has?

>> I'm sure that you need only imply you always tell the truth

>>
>> COTS = Commercial Off The Shelf.
>
>I'm quite familiar with the term COTS. I didn't respond because it was a
>moronic question to ask someone who works in the system.

Riiiight. And all the contract administrators can "work on the board,"
do the designs, get their hands dirty in the labs, monitor the
environmental testing, troubleshoot failures, and, in general, make
the PRODUCT work. Suuuuure.

Just who do you think specifies whether or not a commercial, off
the shelf component will WORK in a PRODUCT? Here's a clue,
bionic one, it's NOT the contract administration side of a contract.

>> "Millions" in contract awards have been awarded since WW2. The

>> terms of the overall contract, but the techniques and notebook
>> data aren't owned by da gubmint.
>
>I bet you a dollar to a donut that the military specific application of that
>technology is quite proprietary.

"Supercalifragilisticexpialidocious" is probably proprietary to Walt
Disney Productions. I don't know the details but the Disney
corporate buildings are at the corner of Verdugo and Buena Vista
in Burbank. "Antidisestablishmentarianism" is free for public
use, in some dictionaries. HEMT, PHEMT, and GaSP are
non-copyrighted process terms in the RF-electronics industry.

I'll meet you at the Krispy Kreme at the Empire Center in Burbank.
You bring the money, I'll bring the appetite.

Now, how does your "COR" superiorness relate to the NCVEC
petition (RM-10870) and the term "Communicator" class of
amateur radio license? :-)

"De facto" or "de jure" noitwithstanding, it IS a technical possibility,
and for some of us, reality.

Sorry it punctured yet another "I Don't Have Any Practical Experience In
Amateur Radio Upon Which To Base This But I'll Take A Shot And Hope I Get Away
With It" rant, Lennie

> The 911 combination IS a national standard for all telephone ESSs
> in the United States and is accounted for in all number
> combinations used in signalling and dialing in the telephone
> infrastructure.

"911" is not.

"9-1-1" is. Please refer to the logo on any emergency vehicle that
promotes the number. This was done for a reason.

> Your repeater's "patch" connects to the telephone infrastructure.
> As such, amateur radio enables connection to an emergency
> center...through the telephone system. The "patch" is entirely
> voluntary and not universal.

Regardless...Your puppetboy exposed himself and left parts out to be
stepped on that should have never seen the light of day.

YOU exacerbated the silliness by spouting off on a topic that you were,
AGAIN, ill-prepared to address. Regardless of what's "voluntary" or "not
universal", direct 9-1-1 access on Amateur repeaters >>IS<< commonplace.

Back under your rock and go argue with Arnie about FARs and DFAR's
again...Oooops! I forgot...he backed you into a corner on THAT subject and
you've now decided to get "back on topic" there.

Funny how getting off-topic is OK by you right up to the moment that you get backed into that corner...THEN you want to be newsgroup moderator and redirect the conversation to YOUR needs. Of course when someone tries to direct YOU back to a thread, they are treated to a verbal bashing by you about your "rights" to talk about whatever YOU want to talk about, the First Amendment, etc etc...

Two-faced creep.

Steve, K4YZ

What "R&O" is required for the FCC to go to Joe Schmo's Cable Company and
say "your system is interfering with Commission licensees, and you'll either
stop it or we'll invoke NAL's..???

>Right now, the FCC regulations on incidental radiation devices...(SNIP)

Thank you for YOUR "paralegal" advice, Lennie, but it doesn't stack up.

>Kind of spoils all your ranting and posturing with reality of the
> situation, doesn't it? Tsk, tsk.

Lennie, NOTHING you cited "ruins" anything.

I am a Commission licensee. If I start experiencing interference to my
otherwise properly operating station, it's teh FCC's OBLIGATION to resolve the
issue.

Sorry you don't agree.

I love seeing Lennie backed into corners.

Funny how being there suddenly makes him want to get "on topic", even
though only one day ago he was perfectly happy to ramble on about off-topic
stuff when he thought it was going to make him look "smart". Lennie went
one-acromym too far and found himself bested by a federal employee...Not even a
"radio engineer"...THAT had to hurt!

Sheeesh. What a creep.

You say I am running and hiding from you. A lie.

You say that you're not a bully. Another lie.

You ask why a 911 operator must answer -all- 911 calls. Then you say
you didn't. Yet another lie.

And that was just this weekend!

You've got a lot of 'splainin to do, but just save it for therapy.

Bacause you're nuts.

I am sure your "fambly" is very proud, too.

But that didn't answer my question, Brain.

Without an Amateur Radio license with which to communicatre with you while operating AS a HAM, how can Lennie make an informed opinion as to whether or not you are a "good ham"...?!?!

Do YOU understand the question, Brain? Or do you want to dance around this one for a few days, too?

At least this time there's nothing for you to try and deny. You can just snort and claim I am "nuts" while hoping it "goes away" without rubbing your nose in it any more....

I've never met a sailor who could communicate w/o profanity.

Unless you consider "sailoring" to not be a profession.

Sure he did. And Hitler got the trains running and revitalized a devastated economy. The point being that even the worst scoundrels of civilization can do SOMETHING right once in a while.

When he did those things, I said "Thanks, Len", and I meant it.

When he resorts to profanity and the usual misrepresentations about Amateur Radio, it's "back to work""...

What you are looking at here is called "Markov Text", generated by
mathematical algorithm run on a batch of words. It is commonly used
to produce random blocks of text for insertion into SPAM emails, which
will fool many SPAM-detection programs.

You can play around with an online Markov generator at the following
web site:

http://www.eskimo.com/~rstarr/poormfa/markov.html

A minor radio link: Markov was a student of Chebyshev (of filter
fame)!

>> It's not my assertion, Brain. I KNOW what "major role" they
>play...None.
>
>None at all? Ever? Never?

Nope.

Can YOU prove otherwise?

I've only been asking you for two weeks now to substantiate a similar
claim YOU made, yet you've not been able to pony-up one, single example of how
you are right and I am wrong.

>> YOU made the assertion they did. You were wrong. That was simple enough
>to
>> admit. But then you LIED about having said it. THAT was foolish.
>
>Lied? I said you got it wrong. That is not lying.

You denied saying you said it.

Denying something to have happened in the face of evidence to the contrary
is lying.

>> And I am wondering WHERE you "saw" me with "jumper cables and "sodium
>> penethol", Brain? Hallucinations ARE evidence of being delusional, what
>the
>> "lay" person WOULD call "nuts".
>
>What's next? Bamboo shoots and dripping water?

Whew! You ARE getting a bit delusional! Been watching a bit too many of
those 1940's era WW2 movies, Brain...???

>> >You are so good at this, and you're nuts.
>>
>> I follow the brown streak and you wish I was...
>
>Eeew. You're not only nuts, you're sick.

So...now you have degrees in both psychiatry AND medicine...?!?!

>And if you think "in plain sight" is hiding, well, what can I say?
>
>You're just nuts.

I think the moniker of "nuts" belongs to the guy who thinks none of his mistruthfulness is apparent to anyone else.

THAT would be YOU.

>You say I am running and hiding from you. A lie.

Not a lie.

We've spent two weeks trying to get you to answer the question "What
"major role" do unlicensed radio servies play in "emergency comms" as you
stated they did.

You've danced around that.

>You say that you're not a bully. Another lie.

Unless you can show me a broken bone or a black eye, I'd say you are again trying to dodge the questions by trying to make unfounded assertions.

>You ask why a 911 operator must answer -all- 911 calls. Then you say
>you didn't. Yet another lie.

And I've asked you to please re-post the quote wherein you say I make this assertion.

You provide the URL to the post, Brain, and if it's othr than what >>I<< represented it to be, I will apologize and take my licks. (No sweat there...)

>And that was just this weekend!

Yes...it was...I've asked you to to validate YOUR assertion about 9-1-1 operators.

You haven't done it.

On the otherhand >>I<< have reposted not once, not twice, but three times the post wherein you made claims about "unlicensed" radio services. I offered to provide MORE if that weren't enough.

>You've got a lot of 'splainin to do, but just save it for therapy.

No 'splanin to do, Lucy...It'a ll right there.

>Bacause you're nuts.

I'd rather be nuts. That is hard to prove. On the other hand Brian Burke is a lair, and HE proved that all on his own.

How nuts is that...?!?!

Then I'd say that your scope of experience was pretty narrow.

Just how many "sailors" do you know, Brain?

>Unless you consider "sailoring" to not be a profession.

I am unaware of a profession called "sailoring".

I AM aware of SPECIFIC Naval and Marine Corps regulations that make the use of profanity "conduct unbecomming", and punishable by Article 15 should the offended person so desire.

Does it happen? Sure it happens....I've heard ministers swear.

Do they do it in the course of thier professional duites or in public correspondence?

Nope...Unless you can show me some sort of "official" Naval document wherein profanity was used as a professional means of communication...?!?!

I'll sit here holding my breath waiting on that one, Brain.

(No I won't...just teasing you...)

>and expense.

That's one way to look at it.
(insert standard "I'm not a lawyer and the following is just my layman's
opinion" disclaimer HERE)

Here's another:

Perhaps what Bash did *was* illegal, and prosecutable under the rules at the
time. Maybe the top folks decided not to go after Bash because (choose any
number of the following):

- they made a dumb mistake
- they were planning to publicize the Q&A anyhow
- they wanted to focus on other areas of enforcement
- they didn't think they could win
- they were concerned that prosecuting Bash would bring other things to light,
such as the limited size of the pool actually in use
- they were concerned that prosecuting Bash would sell more of his books and
encourage imitators to do the same thing

>All the academic discussion of what may have been
>the legal outcome had Bash been challenged means
>nothing in the end.

I disagree. It's an example of how things used to work, or not work.

Most of all, the fact that no enforcement action was taken does not mean there was no violation. If a driver zips past a police radar setup at, say, 15 mph over the posted limit but the police don't go after that driver, a violatiuon still occurred. The police in that particular case just decided not to go after the violator, for whatever reason.

Hello? So why does he use the name William? Why not his real name if
that is who he is? I don't know that William is Brian Burke or
billybeeper or whatever other name he may post under, why should I place
any stock in what he claims if he has to use so many names?
He uses an id of juno.com, yet he is posting from google, that dosen't
sound like one can put much stock in anything he says.
So what's your call lennyboy? Oh, forgot, you can't pass the test so
here you are a non-ham who has no credibility on a ham group.

>>> So much for "no other method to serve the unserved areas but BPL".

>Did anyone actually say that? It's highly inaccurate if they did.

I think the actual buzzphrase is "arease underserved by broadband" or some such.

The image depicted is that there are large parts of the USA where broadband access is either unavailable or very expensive. That's partly true - just as it's true that there are parts of the USA where cable TV is unavailable, and parts where underground natural gas service is unavailable. Etc.

The *implication* is that BPL will somehow fill in those gaps, but in ost cases that's not really the case - for the saem reasons competing technologies don;t serve those areas yet.

>I
>think there is a vision of just sending the signals over the power lines
>and boy howdy, an instant nationwide network, everywhere there is a
>power line, "you have mail!"
>
Exactly.Just like there was a vision of next-generation satellite phones that would let all of us place phone calls from anywhere in the world via a network of low-eart-orbit satellites. That vision worked - but it wasn't inexpensive!

> In truth, a fiber has to be run to somewhere near the house that is
>going to be served, so that means that rural areas will not be any
>easier to serve than they are now.

And that's just the first problem. Once the fiber gets there, other competing technologies could use it, too. Including WiFi, as described by K2ASP.

Then there's the fact that the HF losses on power lines are so high that BPL systems need a repeater every few thousand feet. In rural areas that may mean a repeater for each customer, or more. Plus couplers and other hardware for *each* customer.

For anyone who wants to see how the FCC investigates interference these days, there's an interesting memo posted on the ECFS under docket 03-104 received there 23 March 2004.

To see it or download it, just enter 03-104 in the Proceedings box and Federal Communications Commission in the 'on the behalf of'' box. It's a 3-page document but 840 KB in size, being a scan off the memo pages.

The memo is to Bruce Franca, Office of Engineering and Technology, from Joesph Casey, Chief Spectrum Enforcement Division, Enforcement Bureau, dated 27 January 2004. It concerns a complaint by ARINC (Aeronautical Radio, Inc) about interference noise centered around 3013 MHz beginning in February, 2002. Covers the next 18 months.

It was included under 03-104 probably because someone in the OET got tweaked by ARINC's examples of interference handling by the FCC wasn't deemed nice by the OET and the interference might have come from some equipment (a pump) at a cellular telephone site. ARINC was commenting about BPL, not cellular telephones. ? Your FCC in action in modern times.

A taste of all that "obligatory" inteference handling in the future?

>Bacause you're nuts.

...and perverse. :-)

Poor fella don't never seen no old Bell System documents, read the Bell System Technical Journal, look at the FCC Common Carrier Bureau documents and regulations, or even see standards of the "baby bells" such as SBC. He read his QST and now he is the master of his queen's nay-vee.* :-)

For an ace pilot with the CAP I'm surprised the paralegal gunnery snurf didn't whoop and holler about "FAR" also being an acronym for Federal Air Regulations. :-)

Of course, "FAR" or "DFAR" or "COR" or "CAP" has not much to do with ham radio or whether or not it is a "service" but they are mad as heck and aren't going to take it anymore! :-)

I wonder if those three (or four) angry-as-heck amateur radio gods are ever going to get over their perverse personality conflicts with anyone who disagrees with them? I doubt it. Medical science can only do so much...

BTW, I've been at two amateur radio repeater sites, laid hands on the equipment in the presence of other hams who were actually nice, cordial and everything. Obviously they haven't had Article 15 thrown at them by the paralegal gunnery nurse wearing his pilot googles and olive USMC tee-shirt with "Temper Fry" on the back.

It's not a pretty sight... :-(

Can you really prove that statement or are you just blowing farts,
Eric? I bet ham radio has the same proportion (or more) of deviants
than most of the healthier hobbies. (But I'll admit that it's just a
guess.)

The next step would be to modify a commercial product to meet the standard or specification. If that is not possible, then R&D it and produce the product through a specific contract with the developer.

>

You, as the "developer" of the product (as a sub-contractor) would not be directly responsible, but the general contractor "is". Therefore, it is in their best interest to provide you with those regulations. Whether the mistake is yours or the contractor's, the government can and will assess interest, damages, or cancel the contract for non-performance.

> >Seriously,
> >you might want to tell your employer to supply you a copy since you and I

In this case, the contractor is acting as your employer. You, as the
sub-contractor have legal obligations to perform to the standards outlined
in the contract.

Documents no, but a breach of a contract regulation (as designated through
the Contract Officer) can result in the assessment of interest, damages, or
cancellation of the contract for non-performance

The term COTR is exactly as it implies. A technical expert. That is why I
administer contracts concerning security issues, and others administer your
contract. I guarantee, the COTR on YOUR contract is an expert in that field
and can perform the technical surveillance as necessary. They probably
already have.

> Just who do you think specifies whether or not a commercial, off
> the shelf component will WORK in a PRODUCT? Here's a clue,
> bionic one, it's NOT the contract administration side of a contract.

The producer of that component MUST certify that is is within contract
specifications. The COTR, a technical expert, will also determine through
surveillance, inspections, or various other means, if the component meets
the technical specifications of the contract. It's a check and balance
system to insure the product works as promised.

It was a rhetorical answer, Leonard. I work as the COTR on a security
contract. In that area, I am the technical expert. Your COTR is also a
technical expert in electronics.

We surveille, inspect, rate, and coordinate

I won't be doing that anytime soon, not my contract. But I guarantee that
YOUR COTR has already made such a visit. Known to you or not.

I am an extra class amatuer radio operator. The changes in the NCVEC,
testing, or any other myriad issues won't effect me in the least. I'll
concentrate on the danger that BPL is posing. The issue of Morse testing is
long since over. Time to move on.

Service providers can't broadcast it? There's an IEEE standard
on it, same main number as "WiFi" (which is wired) but different
decimal numbers. 30 mile range. Not in HF.

>Then there's the fact that the HF losses on power lines are so high that BPL

What "fact," senior? Where did you see a detailed technical description
of Access BPL that stated that "fact?" Fill us all in with all this
broadband expertise of yours.

Where in the United States are electric power distribution lines
standardized as HF transmission lines? That's not in the NEC,
either NEC.

You have technical experience in wired repeaters? Ellucidate.

I find it exceptionally misleading that people are being allowed to
believe that the signals are just going to travel by the power lines
from start to finish.

Or just do the right thing, and run the silly signal the rest of the way
into the house via accepted and technically astute methods.

note: I'm making a bit of an assumption that this can be done.

> Then there's the fact that the HF losses on power lines are so high that BPL

I wonder how the costs compare between a BPL line system and a cable
system?

They are administering the "Morse Code" exam using the Farnsworth
method. Where does part 97 state the Farnsworth method cannot be used?

Since you invoked the "L" word, it is kind of strange that the methods
of implementing the "universal access called for in the speech:

> "We ought to have universal, affordable access to broadband technology
>by the year 2007," Bush said in a speech focusing mostly on homeownership.
"And then we ought to make sure that as soon as possible thereafter
consumers
have plenty of choices..."

Assuming that we would have to expand the cable tv broadband system -
and if there is to be universal access, this would almost certainly mean
changing cable data service to a public utility. Remember that cable is
at present NOT a Public utility, it cannot be forced to run it's lines
where it doesn't see a profit.

Supplying broadband to everyone in the country is a project similar to
the electrification of rural America.

And right now, there are certainly *not* plenty of choices. So it is
left up to the listener to determine how the number of choices will be
expanded.

So to me it is a very liberal idea to even attempt universal broadband
access, and since not many other choices are available for increasing
the number of choices, it by default includes BPL.

And most of the electrification of rural America was NOT done by the
utilities. The rural residents themselves banded together and got the lines
run. Once the lines were in place, then the public "futility" was happy to
take over as the major expense had already been covered by someone else.

The universal access with multiple choices means very heavy investment as now that could be construed to mean that BPL, DSL, cable, and WI-FI all need set up in our rural areas to provide those choices. Guess what! Ain't gonna happen.

That's the key question these days for any license requirement these days. You
make an excellent point.

The problem is that it also applies in other areas, such as "what does FCC get
out of protecting hams from BPL interference?"

>As the
>treaty requirement is now gone, and no other service uses it, why
>bother.

Because hams *do* use it. Some other services use it too, but not to any great
extent.

>The FCC isn't
>in the business of giving out gold stars for the

[expletive deleted]

>of it.

Not about "gold stars". About qualifications. Of course there's differences of
opinion on what qualified means.

>Code isn't a lid filter,

No test is a perfect "lid filter". Particularly not a test given one time.
There are bad doctors, lawyers, engineers, etc., who have been through much
more extensive and rigorous testing and education, yet were not filtered out by
those testing and education systems.

> as witness
>14.313 back in the days of 13wpm to be allowed to operate there.

You mean before 1990? (medical waivers)

Remember this:

All those folks on 14.313, 3950, W6NUT, etc., passed *written* exams that included the rules and regulations. Most of them passed multiple written exams, yet they broke the rules anyway. So obviously those written tests aren't a perfect lid filter either. Shall we dump the rules and regs from those written exams because they didn't do the job?

oh wait, that's what NCVEC is proposing for the entry level!

What's the difference? If the teacher left the door and his/her desk unlocked, and there was an unmonitored copy machine in the office, would it be ethical for a student to sneak in, find the test, make a copy and put everything back as it was? Why or why not?

But let's use your analogy and see where it leads.

Suppose the university had an "honor system" policy that specifically prohibited divulging what was on a test. Would it be ethical for a frat to compile question lists?

>argument was ever leveled against Bash as violating any
>FCC rules...much less any "criminal act" such as

>receiving stolen goods.

How about this, then:

There was a time (several decades long) when ham license exams were given by mail if the ham-to-be met certain criteria. The written exams were sent to the volunteer examiner (no capitals) in a sealed envelope with a lot of instructions explaining how the materials were to be handled. Included in those instructions were warnings not to divulge the contents of the test.

Would it have been unethical to make a copy of the test? Why or why not?

Then what's your problem?
>
> There's a legal area that is a "grey area" for many on what
> constitutes "ownership" of test materials. I'll leave that up to
> attorneys and judges to thrash out...

In the instructions for the by-mail test I took for Novice, their were explicit directions not to copy or divulge the contents of the test. The signatures of the applicant and the volunteer examiner certified compliance with all of those instructions. Most of us took them very seriously. Bash didn't.

Of course you wouldn't know about that, never having had an amateur license of any type...

Most of the electrification of rural America was accomplished via the
Rural Electrification Authority aka REA. There had to be so many houses
per mile to justify the cost of running the lines and you had to be
within a certain distance of the right-of-way to get service or pay for
the cost of the line to be run to your residence.

> hand-off.

Our repeater has better coverage than cell phones in the area and
covers much area that doesn't have cell phone coverage *at all*. It's a
very advanced system, with several sites that poll each other for the

best signal from you, and send the strongest to the main repeater site. So if you want to be prepared to call 911 from a wireless system in our area, you are much better off to use our repeater system.

The only disadvantage is that the phone identifies itself to the operator as being at the location of the repeater, so you have to identify your position.

Which means that if you really want to fight BPL, you need to go to
the stock market analysts and point out what a bad investment it may
be, and probably more effectivly, your states utility regulators (if
they have any of them left) to make sure that the power companies
don't use funds from a regulated service to set themselves up as
ISPs. Using Montana Power as an example, ISPs and Power companies
don't mix very well.

If a ham decides to use it, he can then learn it. Perhaps some of the
old novice subbands
can be informally reserved for fumbling beginners to QSO with elmers
willing to train
them. They may need to use phone on another frequency to assist the
learning process.
Shouldn't be a problem as long as one doesn't talk *and* send code at
the same exact
time (there's a rule saying not to use more than one slice of bandwidth
(frequency) at a time).
Split band and split mode is okay.

>

>
>Not about "gold stars". About qualifications. Of course there's differences of
>opinion on what qualified means.
>
Also what qualifications are really needed for the license. As if I
need more knowledge to
operate on 14.155 vs 14.277MHz.... Knowledge of rules, electrical and
RF safety, how
to identify and resolve RFI problems (which includes transmitter and
receiver theory), knowing

what constitutes intentional interference vs accidental QRM, what
"Pecuniary interest" means
and that that rule actually protects the ham bands from being invaded by
business users....

VHF and above users have limited range, and thus cannot cause global
disruption. HF
users can. So maybe that's an argument to restrict novices to VHF and
above, or low
power HF.

As the FCC allows us to take the covers off our transmitters, and lets
us homebrew
them as well, we should be expected to pass a test to demonstrate basic
knowledge
of how this stuff works, and what sort of problems can be caused by mis
designed or
mis adjusted equipment.

>
Those clowns knew full well that they were breaking rules. "Oh, you
mean I can't use expletives,
maliciously interfere, and not ID?" I don't know the answer as to how

to construct a lid filter
in the license testing process. But the FCC said itself that things did
not degrade after restructuring
(5wpm generals and extras set loose on HF). Once everyone learned to
fix their newbie type errors.

The Funding is already there . . .
The Gore TAX for School Internet Connection.

Run the Main BPL Trunk-Lines and Distribution Points to the
Schools and have the Federal Government pay for that with
the existing Gore TAX.

WHY - BPL Broadband In Every Class Room - How Can Anyone Say NO To That !

Once Neighborhood Schools become the Distribution Points and the
BPL Broadband a 'low cost' BPL Broadband "Product" can be offered
within the neighborhood for home use.

Some "argue" it just in hopes of burying thier mistakes. That makes them
DOUBLY wrong!

A man's character stock goes WAYYYYYYY up when he's got the cajones to
just say "ooops, I was wrong", rather than play the games Brain and Lennie do.

Not that I'd ever expect them to...

Brain claims it's just to deter spam.

He could just use a spam filter or a "...remove NOSPAM from e mail" type
block, but he has to create some new personna to "hide" from the spam.

Yeah...right.

What he DID was create "billybeeper" to artificially create a Lennie
fan...yet got a bit too proud of himself one day and signed his real "name" to
the end of the post....BUSTED!

Oh well.....

BAM! Hammer on head.

If you get rid of the "f" word and any ribald reference to the female form, and Howard Stern is just another baritone late night oldies DJ.

Funny, though, that most of the people who are NOW dropping the hammer on him are the SAME people who laughed at him a 10-15 years ago, but NOW have children of thier own and don't want THEM exposed to that kind of filth ! ! ! !

I agree.

Our local ARES and Amateur clubs have a great raport with local 9-1-1 services and are regulars at their in-services to discuss what we can/cannot do, etc. All of the local 9-1-1 operators know that if the caller ID's as "via Ham Radio" that the call is from a remote location other than the number calling.

That's a part of that "training" thing some posters here say doesn't happen.

> *each* customer.

The slides I've seen presented by BPL marketing fluff folks show repeaters
every
300 meters ... that's a hell of a lot of repeaters to "serve rural America"
... yet they
claimed in the same presentation that it was "low cost because no
infrastructure was
required because the wires were already (presumably) there."

I pointed to their block diagrams with fiber to the area, "head-ends" to go
from fiber
to the MV/HV lines, repeaters every 300 meters, couplers, etc. and asked
"How can
you claim with a straight face that this "doesn't require the installation
of infrastructure?""

The written tests are not, and have never intended to be, a "lid filter."
ALL that they are meant to do is assess the applicant's basic level of
competence in the material the test covers ... they don't mean the applicant
is an "expert" in the field (not even the Extra test ...) ... they JUST are
a demonstration of the MINIMUM level of knowledge required for ENTRY into
whatever class license/privileges the test is for ...

I don't recall anyone claiming the written tests were a "lid filter" ...
however, many people asserted that the Morse test was (though the FCC
debunked that idea
back in 1989 or 1990 ...)

> oh wait, that's what NCVEC is proposing for the entry level!

I don't favor the NCVEC proposal either (I prefer the ARRL proposal).

I read them as both part 15 devices, and they have to put up with each
other's interference. Hopefully the manufacturers making the junk will
either redesign or go out of business.

Good work!

Right there is the evidence that the proponents are being less than
accurate in their portrayal of BPL.

Since BPL is slower than some other broadband services, and the
infrastructure appears to be similar to running fiber, is the slowing
attributed to the "existing infrastructure" part of the line?

I'm ignorant of the finer details of BPL, so I may be way off here.

Seems like if they have to run fiber, and do all the repeaters, etc.
why not just..... run fiber and put the signals into the houses as
they should be?

Any good sources of the nitty-gritty of BPL technology?

Read this dimbulb:

Transceivers used in the Amateur Radio Service below 30 MHz do not require FCC authorization prior to being imported into or marketed within the United States, but transceivers for other services, including the CB Radio Service (CB), do require Commission approval.

Note: He did say ten Meter Radio.

Dual use radios (CB and Ham) will not be certified. Tthe "10-meter" transceivers that are on the "list" are not acceptable for importation or marketing into/within the United States.

Now tell us again how a Radio Shack HTX-10 10 meter radio is illegal to sell in the United States?

Encryption would be one possible application for Markov's algorithms - although that wasn't his original goal. He was developing formulae to attempt to explain the random motion of particles in liquids (aka Brownian motion), and various other stochastic processes. His algorithm is most loved by spammers, who use it to create blocks of text which pass right through spam filters. Apparently, some artists have used it to write song lyrics and prose....

this is a CB radio newsgroup dipshit we are not talking about hams
using 10 meters the subject is export cb radios. Sound like you are
trying to confuse people like the export dealers do by calling them 10
meter radios LOL

Funny, your response to him was about a licensed amateur owning,
using, and selling a ten meter radio. And if you will check your
headers, you will see that this is not only posted to rec.radio.cb,
but also to rec.radio.amateur.policy. Sounds like you are the one
thats confused, try to keep up with the thread, dipshit. LOL

>
>A lot of people like to argue a point even if they are wrong.

Such as yourself.

The subject of "spacing" in telegraphy tests was long and drawn
out in the past postings on this newsgrope.

Part 97 did not, and still does not, describe International Morse
Code directly, nor does it define the equivalent word rate for same.
The only reference to International Morse Code is a CCITT
document found at the International Telecommunications Union,
itself having been replaced by an ITU document number some
years ago. I have that document. So does Brian Burke. No one
else in here has admitted having that document.

The "CCITT" (a French acronym translating to "International
Communications Consultative Committee') was formed many
years ago and was concerned primarily with wired commercial
communications systems. Cooperative regulatory actions in that
field are handled now by the ITU-T, the "-T" referring to Tele-
communications. Cooperative regulatory actions in radio are

handled by the ITU-R, the "-R" referring to radiocommunications. The ITU is a United Nations body, has no separate "police" functions, and all agreements are based on "good faith" of diplomacy among all member nations.

In the CCITT document - a very long one, only part of which is concerned with telegraphy - the character set coding of International Morse Code is described in relative terms such as ratio of length of dot to dash to character space to word space. It does NOT include any definition of "word" in telegraphy nor does it define specifically any word rate per unit time.

The "Farnsworth" method is, effectively, a two-rate system with characters transmitted at a higher rate than "word" rate so that is a distortion of the ratio specifications of the CCITT document cited by the FCC in Part 97.

A "word" in telegraphy is - by common convention - taken to be 5 characters plus a space interval. That is NOT defined specifically in the regulations of any Part within Title 47, C.F.R. A telegraphy "word" of 5 characters plus space dates back well before radio existed and was common convention in commercial wired telegraphy communications. The "word" definitions have fallen out of regulatory text concerning telegraphy. The insistence of "we've always done it that way" is extremely arguable in legal situations and is not a per se definition for laws, rules, and regulations.

Farnsworth spacing has been approved for U.S. amateur radio telegraphy testing by the FCC in writing. That came some time AFTER its practice had been done by some VE teams. It has NOT been legally defined in detail by the FCC in regulations.

Essentially, the VE team practice of using Farnsworth spacing, however convenient for all involved, DID NOT HAVE A LEGAL BASIS FOR THAT PRACTICE. It required a specific document (separate from published regulations) from the FCC to permit its use years after it was begun by Volunteer Examiners.

The argument raged in here due to the overtly sensitive psyches of certain licensed amateurs who stated they were "right" because they were licensed, tested, etc., etc., yet none of them were involved in setting regulations for any radio service and certainly had no power to enforce any beyond whining and crying in this newsgrope. The only "regular" who had actual, legal experience in communications law stayed away from the main argument.

>How did the "Q&A book folks" gather their information?

By all the time-honored practices used in college and
university written exam "cheat sheets" well before there
were any radio regulating agencies.

Stop trolling for an argument subject. The practice is
well known in many activities. It has been explained
by others in here. Dick Bash was a late-comer in the
FCC examination "typical test question-answer" area
in the USA. Many others were ahead of his company.

You waste our time, my time, everyone's time.

Incorrect. This is not a ballpark, not a government contract discussion
forum, and Macy is vainly trying to exact retribution for perceived
personal affronts long ago in the past. Not only that, he ventures far
from the general subject of this newsgroup which is concerned with
amateur radio policy.

Macy acts the petulant little child, whining and crying because he
is not honored and revered because he exists. Puerile behavior.

He tries to play games. Unfortunately he has struck out. Long ago.

> Good work!
>
> Right there is the evidence that the proponents are being less than
>accurate in their portrayal of BPL.

Actually, no more "inaccurate" than any other MARKETING and PR
group for any communications carrier service.

There is NO factual, detailed technical description available in the
electronics or communications industry trade publications about any
proposed or in-test Access BPL system.

The public doesn't know the conducted BPL signal levels, doesn't know the (presumably) tested losses along electric power distribution lines, the BPL coupler and other interface equipment losses. Nor is there any specific data on the range of impedance/admittance of installed electric power lines throughout the USA. Those electric power lines were NEVER standardized to be RF transmission lines.

Without detailed information to make judgements from, there is no telling what the RF radiation levels might be. It is obvious from monitoring installed test systems that it DOES radiate RF over a broad spectrum.

> Since BPL is slower than some other broadband services, and the
>infrastructure appears to be similar to running fiber, is the slowing
>attributed to the "existing infrastructure" part of the line?

Not a good question since there is not enough detail to determine any data rate.

Access BPL is essentially a very new way to distribute data. From the allegedly-needed bandwidth requirements covering most of HF and part of VHF spectrum, the fastest data rate could be greater than 10 Megabits per second, certainly faster than a T1 line at 1.54 MBPS. Without any detailed system information it is very broad conjecture.

> I'm ignorant of the finer details of BPL, so I may be way off here.

So are we all. :-(

> Seems like if they have to run fiber, and do all the repeaters, etc.
>why not just........ run fiber and put the signals into the houses as
>they should be?

Good question.

> Any good sources of the nitty-gritty of BPL technology?

Look at the websites for industry magazines EDN, Electronic Design, and RFDESIGN, even Microwaves & RF. I get all four and there's not been any nitty-gritty data yet. Lots of PR generalities.

As an IEEE Life Member, I get their membership magazine free each month and SPECTRUM is well-regarded as giving detailed explains on many electronic systems. Excellent articles, informative. None there yet. The SPECTRUM is on-line and with free access at www.ieee.org.

A website search turns up most of the BPL proponents' sites but you won't find any details there, just the same PR slide-show material they showed to the FCC.

The FCC Office of Engineering and Technology isn't telling. They might not know any more than anyone else, hence their NOI of last year.

Access BPL is going to be bad for HF. We just don't know HOW bad. Kiss your HF receiver sensitivity ratings goodbye...it won't matter if BPL goes past your house.

You betcha, though it's ironic how few Americans in this "well informed" environment have any inkling as to what's actually happening in this good 'ole USofA. Reliable news feeds are available and anyone can look, but it's remarkable how few people can connect the dots. History is repeating itself. Problem is, it's only been 50 years since the fall of the Reich; way too short a time for an encore, but here we are.

Read and be educated, folks...

Every one who knows me call me JJ, I do have a callsign, on the other
hand you go by several names here and not being sure of just who you
really are, you probably don't have a call sign.

No, none, nada, credibility.

>
>No wonder you said you've been divorced so many times.

I'm not "picking" on your wife, Blockhead.

I ASKED if she "...read your antics?" and further asked if she was aware how you "thoroughly humiliate your family name?"

Since YOU already quoted it in this same post, I need not go back for that one.

Thanks. (...you really do make this a lot easier than you realize!)

>Please refer to any telephone key pad. There are no dashes on them.

No, there's not.

Neither is "911"

Acting on recommendations from APCO (Lennie can tell you who THEY are...)
it was encouraged that the national emergency number be depicted as three
discreet numbers, ie: 9-1-1. Please refer to the logo on almost any emergency
vehicle in the United States.

If it would be any easier for you, I can use 9.1.1., but there are no
periods on the phone either.

Such as?
>
> You waste our time, my time, everyone's time.

How? All I did was ask some questions. You don't have to answer them. But for some reason you are compelled to argue with anyone who does not agree with everything you post.

True, and it is equally valid that...
Not being prosecuted for an act
doesn't mean that the individual
would have been found
guilty of the act had he actually
been prosecuted.

Cheers,
Bill K2UNK

Perhaps...and that is exactly my point. We will never
know because the opportunity to have prosecuted
is long gone and all this comes down to is academic
discussion or a BS session over a couple of beers.

> >All the academic discussion of what may have been
> >the legal outcome had Bash been challenged means
> >nothing in the end.
>
> I disagree. It's an example of how things used to work, or not work.

I'll give you that. My point had to do with the legality
or illegality of what Bash did.

> Most of all, the fact that no enforcement action was taken does not mean
there
> was no violation. If a driver zips past a police radar setup at, say, 15
mph
> over the posted limit but the police don't go after that driver, a
violatiuon
> still occurred. The police in that particular case just decided not to go
after
> the violator, for whatever reason.

But even in the case you site, the driver, if actually
prosecuted (given a ticket for 15 over) might be
found not guilty for any of a number of reasons.
Martha Stewart was NOT prosecuted for insider trading.
Was she guilty of insider trading? Many people
believe so...but apparently the prosecution didn't
believe their case strong enough to win and only
went after the lieing to federal investigators.

Wouldn't that come under "wanted to focus on other areas of enforcement" (ones
that required no work) and "made a dumb mistake" ?

Speeding, especially 85 in a 65, is much more of a black & white
issue. What Bash did could easily be a very grey area with multiple
defenses (e.g. 1st amendment, etc).

> >> > The

> What's the difference?

In the "sneak in" case, there is actual illegal activity...
not so with just memorizing questions and writing them
done later at the frat house.

> If the teacher left the door and his/her desk unlocked,
> and there was an unmonitored copy machine in the office, would it be
ethical
> for a student to sneak in, find the test, make a copy and put everything
back
> as it was? Why or why not?

You keep attempting to create an analogy to an
actual "covert" action by a student rather than
simply memorizing question 1 and writing it down
later. You are compariing apples and oranges.

> But let's use your analogy and see where it leads.
>
> Suppose the university had an "honor system" policy that specifically
> prohibited divulging what was on a test. Would it be ethical for a frat to
> compile question lists?

Don't know the validity of such an honor code and
or violation of that specifically. In the Bash case, however,
you are not dealing with any academic scenario...you are
dealing with a fedreal agency. Every day, there are 100s
of leaks, etc of federal memos, etc woth no one seeming
to care, prosecute, etc.

> >> > Oddly, no one seems to bash

> >
> >And those methods were NEVER chalenged as to the
> >means being legal or not.
>
> Just as some drivers go way over the
> limit and yet never get a speeding ticket.

Not the same. There are millions of cases which
show that speeding can and is prosecuted. There
is NO example case that shows Bash would have actually
been convicted had the FCC pursued it.

> >> and his books did not explain how
> >> the material was obtained.

Again, you change the facts. If the test giver copied the test, I agree
it would have been a violation. BUT, if the test taker memorized
question 3 on that test and sent it to Bash after taking the test,
then I see no violaution or ethical issue.

Cheers,
Bill K2UNK

Good...so far.

> The problem is that it also applies in other areas, such as "what does FCC
get
> out of protecting hams from BPL interference?"

Then will we expect you to make that argument to the
FCC when you comment?

> >As the
> >treaty requirement is now gone,
> > and no other service uses it, why bother.
>
> Because hams *do* use it.

Yet hams do NOT need to pass a CW test to be
allowed to use morse. If a "no-code" tech decides to operate
morse on VHF, they are free to do so without ever being
tested. If the ARRL proposal gets the nod, the same would
be true for Novice and Generals on HF also.

> Some other services use it too, but not to any great
> extent.

And certainly not to any extent that one would expect
any ham to need to know code to read or operate
with nay of those other services. By the way...what
other services are you thinking of?

> >The FCC isn't
> >in the business of giving out gold stars for the
>
> [expletive deleted]

Jim, even I am not offended by "hell"

> >of it.
>
> Not about "gold stars". About qualifications.
> Of course there's differences of
> opinion on what qualified means.

The retention of a 5 wpm test for Extra in light of no
code for all others makes even less sense.

> >Code isn't a lid filter,
>
> *No* test is a perfect "lid filter".

No test is in any way a lid filter...as you note below.

> Particularly not a test given one time.
> There are bad doctors, lawyers, engineers, etc., who have been through
much
> more extensive and rigorous testing and education, yet were not filtered

Some "10 meter radios" have strange features like echo boxes, roger
beeps, and channelized
tuning that no normal HF ham radio set ever has.

It's perfectly fine if a ham takes a CB set and modifies it for use on
10 meters. But
it can no longer be used on the CB band, so adding a switch to create a
dual band
dual service radio is not allowed.

Dee, correct me if I'm wrong. Isn't there available direct satellite internet available? As long as one has an unobstructed view to the Southwestern sky? (I subscribe to Direct TV - but use DSL as it only costs me $29.95 per month). I think it runs $49.95 per month (the same as DSL costs in Sun City, Florida). As far as broadband over powerline, we all know it isn't going to happen in rural areas. I'm really curious about those broadcasters with deep pockets and what will happen to channel 2 and 3 television. Of course, analog tv is on its' way out which will probably save BPLs real quick demise .... maybe.

>
Presumidly the teacher or prof doesn't use the same test year after year,
or even more than one session. So the memorizing and writing out the
test questions after the test is over has no effect, as that test will never
be given again. Now, if that test is actually used again next year, it
implies that the teacher or prof doesn't really care. Or too lazy to
bother. (Most tenured college profs consider teaching an undergraduate
class the equivalent of taking out the garbage, or just a big pain and waste
of time they would rather use writing up National Science Foundation grant
proposals or writing research papers to get published in some journal.
Profs are judged on how many papers they get published, not how well
they taught a class. And how many profs will just issue a grade of "C" to
someone he suspects downloaded the paper off the 'net rather than go thru
the trouble of accusing the student of that. He likely just wants to
get that
grading chore done so he can get back to the research.).

So that upper level person at the FCC who wanted to avoid the work
probably figured that Bash didn't matter anyway. Ham radio tests aren't
the same as say the state medical board tests in the sense that someone who
"cheated" isn't going to put a patient at risk.

IIRC, there are some nav beacons and automatic IDers used on taxi dispatcher systems and such using Morse code. But nothing I know of that sends out "real" information using Morse code anymore.

I wonder if a commrecial broadcast radio station could legally ID using Morse
code, or use phonetics. "Whiskey Alpha Bravo Charlie New York"

I imagine it is available in some areas. However I was attempting to make
the point that it will not be economically feasible to provide the same wide
variety of choices to a rural area as a metropolitan area. A rural area
will be more limited in the internet access choices to pick from.

I know. However, it's confusing to post to both groups and use a term that
means different things in each place.

>
> It's perfectly fine if a ham takes a CB set and modifies it for use on

I confess I didn't know that. I own a Ham Major M588 that someone else
converted from CB to 10m, but it doesn't cover anything below 28 MHz now,
so I guess it's OK. Mind you, it's rated at 10W on AM/FM and 20W on SSB, so
it wasn't legal before it was converted! I think it originally had 'high'
channels too.

The cheapest satellite Internet access in the US is Starband, which is $40/mo for 768k speed. However, the combined cost of equipment and setup is $600!!! This is why I still have dialup, no other broadband being available. It is possible to find the equipment used (some people sell it when they get DSL or cable in their area), but the setup fee is still $240. That's not a typo, it's $240 for setup, not $24.

In my case I think both DSL and cable are available on the other side of the street! One friend suggested I should get Wi-Fi and link into one of my neighbours, paying a cut towards their broadband bill. He knows someone who linked their house with their business premises by Wi-Fi, but says they lose the connection when it rains!

BPL is set to cost only about as much as DSL and maybe nothing to install. Some people would go for it just because they don't have a spare 600 bucks to buy and set up a satellite system. I would almost be tempted if it wasn't for ham radio. Cable Internet is $55/mo here. That includes $15/mo for basic cable TV, whether you want it or not. DSL is $35/mo. I am sure that some people would try BPL instead, as it doesn't need extra wires or Wi-Fi.

Why do you insist on inserting superfluous characters in the string?

Probably the same reason why you insisted the FCC keep superfluous
requirements in amateur radio testing.

Do you enjoy being wrong so often?

Has this become a part-time job for you?

Doesn't pay much, does it?

Sure would be nice if Lennie or Brain could produce a specification
document from the FCC that delineates what the "spacing" should be.

I know it probably won't happen, but it sure will be fun watching the
excuses fly as they try to dodge THIS "demand".

And >>MY<< point, you sarcastic putz, is that nothing ever DOES "get done"
in this forum.

Myself and several others have, on several occassions, tried to get some
number of the "members" of this forum to move forward on important issues (ie:
spectrum protection), only to be immediately pulled back into the "Morse Code
Test" issue.

As for what YOU find (or may NOT find) astounding, I am sure that a
cowardly, spineless putz like you finds any numer of things astounding...Like
knowing the name of at least ONE of your birth parents..

Shrivvel up, dweeb.

Steve, K4YZ

>Why do you insist on inserting superfluous characters in the string?

So...the recommendation of one of this nation's most respected professional
communicators association is, in YOUR estimation, "superflous"...?!?!

Maybe that's why we "lovingly" call you "Brain"...as in lack of...

>Probably the same reason why you insisted the FCC keep superfluous
>requirements in amateur radio testing.

What's "superflous"...?!?!

If you mean Morse Code testing, neither you nor Lennie have shown me where
the Morse Code is "superflous" to Amateur Radio practice.

>Do you enjoy being wrong so often?

So far, the only thing I've done "wrong" is to mention some parts of my
military servcie where it was not pertinent...My bad.

As far as Morse Code utilization in the Amateur Radio Service goes, I
wholeheartedly recommend that YOU take some time to cruise the narrowband parts
of the HF Amateur allocations.

>Has this become a part-time job for you?
>
>Doesn't pay much, does it?

You mean getting to rub your nose in your lies, Brain?

It's worth it just to see you fidgit and tap-dance around your own silliness.

Steve, K4YZ

PS...For what I make in my "real" job, I can write this off as entertainment! I ought to send you an IRS form 1099 this year.

>
>How does the 911 operator with the radio talk to >>>me<<<?

Probably the same way the 910 and the 912 operator does.

Why would the 9-1-1 operator WANT to talk to you?

Did YOU initiate the RFS via autopatch? If not, they have nothing to say
to you...9-1-1 operators wait for you to call them, not vice-versa.

And if you DID initiate the call, I imagine they talk to you the same way
they'd talk to me...In English. If you DIDN'T initiate the call, I guess the
9-1-1 operator isn't GOING to talk to you.

I am wondering where you're trying to take this and what point you're
trying to save from all of this spinning, Brain. If you don't initiate the
call, they aren't going to talk to you...REGARDLESS if the call came via
hardline, wireless or Amateur Radio autopatch.

I realize that there's a bit of common sense in that that's hard for you
to assimilate, but it's true.

In 18 years of service in the USMC, I can honestly say I NEVER head ANY
USMC or USN officer use "profanity" in thier official capacity. As I
said...did I hear any of them EVER swear? Of course, but NOT in order to do
thier jobs, communicate a point or otherwise use it to try an effectively
express themselves.

It wasn't necessary.

Brian, for what its worth, in my area, a 9-1-1 call on our repeater is going to get through more reliably than a cell phone call, and we can access the repeater in places in which no cell phone is going to get through. The repeater system covers our county, which is mountainous and has many area where the nearest cell phone tower is many miles away.

Is this available everywhere? No, it sure isn't. But neither is cell phone service. But since it is, we use it. If I'm in my area, and I witness an emergency and NEED to get 9-1-1 immediately, I'll reach for my HT or mobile rig before I pick up the cell phone.

>>> Essentially, the VE team practice of using Farnsworth spacing,
>>> however convenient for all involved, DID NOT HAVE A LEGAL
>>> BASIS FOR THAT PRACTICE.

Actually, it did have a legal basis.

The FCC was informed of the use of Farnsworth-spaced Morse Code, and of other standard practices of the VE teams. FCC took no exceptions, and there were no dissenting opinions in the FCC or the VE teams. Therefore, the use of Farnsworth spaced Morse Code had a legal basis.

In addition, anyone who prefers non-Farnsworth-spaced Morse Code for their test need merely request it and the VE team will provide it.

Those who understand how Morse Code works have no problem with the use of Farnsworth spacing.

typical of CB Radio, nowadays.

this is why all the old timer CB'ers were against the FCC dropping the
Licensing requirements.

But it happened and now we've got these kind of operators. trouble is,
now they're wanting to do the same thing to Amateur Radio.

Another ham radio operator busted:

March 3, 2004

Mr. Mark A. Glover
10632 Artcraft Avenue
Garden Grove, CA 92640

RE: Amateur Radio License KE6TTL: Warning Notice

Dear Mr. Glover:

In reference to your letter dated February 26, 2004, concerning the Catalina Amateur Repeater Association, enclosed is the letter sent to you requesting that you not use the repeater.

Our letter of February 2, 2004, explained the right of the repeater association to make such a request. If there are any further questions, please feel free to contact us.

If you have an objection to the decision of the repeater owner, you are free to pursue legal action locally. No Commission hearing procedures are provided in such matters.

Enclosure: 1

CC: FCC Western Regional Director
Catalina Island Repeater Association

Just one caveat. They probably need to request it in advance of the test
date as the VE team will probably have to order a special tape. I doubt
that the teams keep this on hand.

>

Naturally. Farnsworth spaced code for slow word speeds is much easier to copy than using slow letters.

Here's a few more Jerry..it's a friggin' scroll of abuse reports.

ALBUQUERQUE, NM: The FCC sent a Warning Notice March 14, 2000, to Amateur Extra licensee Dean M. Brown, AC5IU, advising him that information from the FCC's High Frequency Direction Finding Center in Columbia, Maryland, indicates that the licensee "deliberately interfered with the radio operations of other licensed amateurs on the 20-meter amateur band on March, 2, 2000." The FCC also cited information that the licensee "failed to identify and used a disguised voice." FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth warned Brown that operation of the type described "will not be tolerated," and he requested the licensee contact him to discuss the matter.

BERKELEY HEIGHTS, NJ: The FCC sent a Warning Notice March 14, 2000, to Advanced licensee Ronald Marshott, N2NGY, to advise him that information before the Commission indicates the licensee has been "deliberately interfering with the radio operations of other licensed amateurs on the 75-meter band." The FCC also said it has information that the licensee "failed to identify, identified by call signs not your own, and have made threats to other licensees." FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth warned Marshott that operation of the type described "will not be tolerated" and could result in a fine and revocation proceedings. Hollingsworth requested the licensee contact him to discuss the matter.

CRANE, MO [UPDATE]: The FCC wrote former Amateur Radio licensee Lonnie H. Allen on March 15, 2000, setting aside the March 8 grant of a Technician license, KC0HJP. On February 23, the FCC canceled Allen's General license, N0TBO, after he failed to appear for retesting by January 31, as requested December 6, 1999. FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth said it was setting aside Allen's most recent Amateur Radio grant "due to allegations that raise questions about your qualifications to hold an Amateur Radio license." The FCC said that Allen took a Technician examination March 4 under the supervision of a W5YI-VEC volunteer examiner team. For now, that application will revert to pending status. Hollingsworth said the FCC would write Allen within two weeks "requesting a response to complaints about the operation of N0TBO." Hollingsworth warned Allen that, in the meantime, he has no authority to operate radio transmitting equipment.

SALISBURY, NC: The FCC wrote Technician licensee Thomas F. Reynolds Sr, N4TFR, on March 14, citing information before the Commission that the licensee has been using ham gear on the Citizens Band and other frequencies and has been selling "transmitting equipment not meeting the Commission's certification standards" over the air on those frequencies. The FCC said its information indicates the licensee has been using FM and LSB on 27.320 and 27.375 MHz and transmitting at power limits above those authorized for the Citizens Band. The FCC said operating uncertificated equipment at excessive power levels constitutes unlicensed radio operation and jeopardizes Reynolds' ham ticket. "Such operation will subject you to criminal prosecution and in rem seizure of transmitting equipment," the FCC warned. The FCC gave Reynolds 20 days to respond to the allegations and said the information he submits will be used to determine what action, if any, to take in the matter. In late February, the FCC wrote nearly identical letters to three other amateur licensees in Salisbury.

Sounds like normal talk on most 2M repeaters.

They are the new W5YI Hams.

Outgoing mail is certified Virus Free.

WHO could forget this clown getting spanked by Charlie!?!

N8WWM guilty of FCC violations. According to the FCC, N8WWM, Dog Adair committed several violations over the air at the expense of the Toledo Amateur Radio Club by utilizing their repeater to break the law. The amateur club received a warning letter from the FCC concerning Adair's violations and were told to take steps to make certain the violations by Adair will not be repeated. Adair not only hurt the entire image of amateur radio with his inexcusable behavior, but damaged the reputation of yet another entity trying to further the good of amateur radio. It's a shame when bad apples like these make it so clubs can't even trust their own users to abide by the rules they were sworn to uphold. Adair is also an infamous presence on the internet. A google search of "N8WWM" reveals a peek into the world of the individual identified as Adair. In addition to FCC violations, Adair has, in the past, been accused of being a prolific spammer, breaking several internet laws and violating several terms of service agreements with internet providers.

Hey lard-ass, I don't have a daughter. Go wash the gravy off of
your chubby face, move out of your moms basement, and change
your crusty sweat pants. Get a job too.

Just how is this ham busted? Did he receive a NAL, get a fine, go to
jail? No, the FCC just stated the problem is of repeater usage is
between this amateur radio operator and the repeater owner.

And this is what helps keep the ham bands from becoming the sewer pit of
communications like the cb band.

Hi Brian,

I actually showed up late for my own party. At 0110, I got home and tined in to find two stations in QSO. I dropped down a few kHz and gave Jim a call as I figured he'd be one of the sure bets. No dice. I'm pretty sure he was about, just not where I was at a given time or he/I got lost in the QSB.

I'd sure like to give it a go again, perhaps a different day/time that'd work for most here. (Thinkin' about ya, Dee.) I recently checked into the Elecraft net and was treated to working a Hawiian station immediately after...on 4 Watts! (more'n halfway to WAS now!)

Some of you ham boys call an nal an automatic multi-thousand

dollar fine, when you try your bullshit scare tactics in
rec.radio.cb.

Do you know the outcome of his nal, JJ?

So you enjoy reading -all- the enforcement archives here? Jerry Ox has
taken it upon himself to post -all- the CB enforcement to rec.radio.cb.

The best part is, it's totally on topic for rec.radio.amateur.policy,
when you tight ass hams get ran.

The rule at the time was you were supposed to change the call to where you lived. Even had to notify the gummit when you were on the move.

Wayne came up with a novel approach to the problem, but most people couldn't use that solution.

It's just that once it became ok to take your call with you, it was one less thing to have as an issue in 73.

"Larry Roll K3LT" <yodoc@aol.comnospam> wrote in message news:20040320224918.05539.00004832@mb-m16.aol.com...

He did not get a NAL twit, he just got a letter from the FCC and it plainly stated that the problem was between the ham and the repeater owner. Here is the last sentence of the letter, get some six year old to explain it to you. "No Commission hearing procedures
are provided in such matters."

Don't blame licensing requirements. It was enforcement that was the problem. Back in the day I "paid" for my license and there were people using reverbs, amps, homemade noise toys, and YES there were people with extra channels. A law is not a law if it's not enforced. It wasn't enforced then nor is it now.

What was his solution? I know he grumbled about being issued a new
callsign just as he was ready to move yet again, but I don't recall
how he got around it. Well, of course once he moved to New Hampshire
and stopped moving around, he kept W2NSD and operated portable. I believe
he said that he couldn't get W1NSD (though he had had "NSD" in various
districts), so he just kept W2NSD. I can't remember how he kept being
able to get "NSD" either.

I believe he used his parents address in NYC as his mailing address,
but were they around up till the time the rule about needing a callsign
to match the district disappeared?

Kids today, they don't know what it was like in the old days. Having
to log everything, and having to notify their governing when they moved.
If I'm remembering, here in Canada you even had to notify if it was
a relatively short move, like operating from a country house for
two months in the summer. Little or no choice in what callsign you
were issued.

By whom?

of the use of Farnsworth-spaced Morse Code, and of other
> standard practices of the VE teams.

"Standard practices?"

Wow!!! A wasted piece of correspondence if there were ever one!

"I hereby inform the FCC that I am using standard, good amateur
practices. Does the FCC agree or disagree? You have 72 hours to
respond. Without a dissenting opinion, this standard, good amateur
practice becomes law."

Hihi!

Why would the VEC's have to inform the FCC of standard, good amateur
practice???

Because they weren't standard?

Because they were at variance with the regulations?

How long after the fact of implementing these "standard practices" did
the VEC's notify the FCC?

FCC took no exceptions, and there were no
> dissenting opinions in the FCC or the VE teams.

Can you document that the FCC even received such a notification?

Therefore, the use of
> Farnsworth spaced Morse Code had a legal basis.
>
> In addition, anyone who prefers non-Farnsworth-spaced Morse Code for their test
> need merely request it and the VE team will provide it.

Hmmm? Wonder what a person would call "non-Farnsworth-spaced" Morse
Code?

> Those who understand how Morse Code works have no problem with the use of
> Farnsworth spacing.

Really?

Those who study "non-Farnsworth-spaced" Morse Code may not know enough
to ask for "non-Farnsworth-spaced" Morse Code. They will be
unprepared for the significantly faster delivery of Farnsworth Code -
and they fail. They go home scratching their head wondering why they
choked on the exam.

Just FYI, the "non-Farnsworth-spaced Morse Code" is referred to as
Morse Code. You will find references to it in Part 97, but you will
find no reference to "Farnsworth-spaced Morse Code."

Considering the number of times that Part 97 has been toyed with, you
would think that the FCC could make a mention of it. But they
haven't. So much for your "legal basis."

All you repeat again and again is the "non-dissenting FCC opinion."
So what is the date of this correspondence?

Unnaturally. If the person prepared for Morse Code as stated in the
regulation, the Farnsworth Code will zip by. Failure is predictable.

When was the last time you availed your amateur radio transceiver to a
non-amateur for emergency purposes? You, your license, and your
equipment isn't there when they need it, is it?

I still think that cellular telephones is a lot better than nothing,
and their widespread use had made huge inroads in providing emergency

communications for the average citizen.

Please, no. No direct correspondence with you.

If we had ever QSO'd, I would recommend you use the buro.

And don't brag and gloat about the high cost of health care. John
Kerry will change all that if he gets in office.

Nope.

> Perhaps you might discover why it is that he does not warrant the
> "respect" he THINKS he does.

I respect Len for his service, and I respect Len for his knowledge of
the art and science of radio.

When Len is given the opportunity to speak about radio, I listen in
because there is something to be learned.

I also share Len's view that the Morse Code Exam requirement has long,
long since served its usefulness to the Amateur Radio community, and
should be retired as a licensing requirement. Should have been
retired a long time ago.

Unfortunately, there are some here that don't value Len's service, radio knowledge, or opinion of amateur radio licensing requirements, or all of the above. They want to exclude Len from the discussion based upon no amateur license. As pointed out repeatedly, those who make and enforce the regulations are not required to hold an amateur license. And in America, every citizen has a voice. Those who are tyrants do not believe this, and when they try to silence Len, they must be willing to accept any and all repercussions of holding such an assinine view.

So I don't read all of Lens posts because its just some self-appointed Sheriff and him barking at each other.

Never have, and since I'd be the control op, I'd not be likely to.

> I still think that cellular telephones is a lot better than nothing,
> and their widespread use had made huge inroads in providing emergency
> communications for the average citizen.

Of course the cellphone is a good thing for reporting emergencies. And if I have one, I'll use it if I'm out of my repeater area. The nearly universal use of the things almost guarantees *someone* will pass by that can call emergency services.

I doubt that Amateur radio ever filled that local "see an accident and call 911" niche. Of course the ham could call using autopatch, but there just weren't enough people to give such a coverage as cellphones could.

But at least in our area, I can better contact emergency services through my HT than I can my cell phone. So that is what I use. Those with only cell phone access can try to use that.

- Mike KB3EIA -

>> need merely request it and the VE team will provide it.
>
>Hmmm? Wonder what a person would call "non-Farnsworth-spaced" Morse
>Code?

Indeed. Does it matter? The FCC itself ahs no argument with it.

>> Those who understand how Morse Code works have no problem with the use of
>> Farnsworth spacing.
>
>Really?

Really.

I understand Morse Code perfectly (to about 40WPM in contests...25WPM in
"routine" QSO's...I have no problem with it at all.

>Those who study "non-Farnsworth-spaced" Morse Code may not know enough
>to ask for "non-Farnsworth-spaced" Morse Code. They will be
>unprepared for the significantly faster delivery of Farnsworth Code -
>and they fail. They go home scratching their head wondering why they
>choked on the exam.

Oh?

You have some "scientific" studies that valiate this asertion, Brain?

You've done a side-by-side comparison of different methodologies to validate this?

>Just FYI, the "non-Farnsworth-spaced Morse Code" is referred to as
>Morse Code. You will find references to it in Part 97, but you will
>find no reference to "Farnsworth-spaced Morse Code."

There is NO reference to spacing techniques in Part 97 for Morse Code.

There is no "technical specification" for Morse Code in any federal regulation that I am aware of. Post one and I will acknowledge it publically.

Post it, show me a federal law that says THIS is the "Morse Code" that MUST be used and I will send you a Savings Bond for $100.

>Considering the number of times that Part 97 has been toyed with, you
>would think that the FCC could make a mention of it. But they
>haven't. So much for your "legal basis."

English jurisprudence has established that those things not specifically prohibited or regulated by law are not illegal...Therefore ARE "legal".

>All you repeat again and again is the "non-dissenting FCC opinion."
>So what is the date of this correspondence?

Has the FCC "dissented" to the use of Farnsworth-spaced Morse Code?

Has it not had the opportunity to intervene if it DID think that it was improper or illegal to use?

Have you not yet found any evidence to support YOUR assertion that unlicensed radio services play a "major role" in "emergency comms"...?!?!

Inquiring minds WANT to know!

Steve, K4YZ

Brain, WHERE in ANY FCC regulation is a "technical standard" for Morse
Code expressed?

Now...HERE WE GO AGAIN: You, Brian "billybeeper" Burke, have made an
assertion that a person may be "prepared for Morse Code as stated in the
regulation..."

I am ASKING YOU, WHERE in PART 97 or ANY FCC regulation, does a
'specification' or 'technical standard' for the spacing of Morse Code
characters exist?

Inquiring minds.......

>communications for the average citizen.

In as much as you are obviously narrowing your scope to "the average citizen" making what would be considered a "routine" 9-1-1 call under "normal" circumstances you'd be correct.

In the scope of "emergency communications" as it pertains to the Amateur Radio Service and within the scope of discussion OF "emergency communications, you ae still trying to compare apples and oranges.

Your bad. Try again.

In as much as you ahve yet to prove you've ever made a single QSO from a location from which I could USE a buro, I would.

>And don't brag and gloat about the high cost of health care. John
>Kerry will change all that if he gets in office.

I am the LAST one to "brag" about the "high cost of health care", Your Putziness.

I think it sucks.

And if John Kerry makes it to the White House, his "health care reform" will likely be no more successful that Hillary Rotten Clinton's was, and will undoubedly be nothing more than "tax 'em till they choke" to pay for it. It will, like other Democratic suggestions, look grand and compassionate while still in the wrapping, yet will wilt rapidly when expeosed to the daylight of scrutiny of the bean counters.

"Health Care's" high costs are principally due to this Nation's inability (and unwillingness) to overcome lobbyists and the Trial Lawyer's Association. Put caps on rediculous lawsuits and absolutely astronomical lawyers fees and incentives and "health care" costs will become more manageable in short order.

Let hospitals and other health care professionals start counter-suing everytime a frivilous suit is brought against us and pretty soon the word will get around that if you don't have a VERY valid claim, you'd best think twice.

Most hospitals have to carry malpractice liability of a half-million dollars for most of it's licensed staff (Nurses, techs, therapists and EMS

personnel) and sometimes as much as 20 times that for physicians.

Now...care to discuss a topic for which you may be adequately informed and prepared?

We've pretty well ruled out health care issues and Amateur Radio.
Meterology, perhasp?

>I respect Len for his service, and I respect Len for his knowledge of
>the art and science of radio.

Len served in the Armed Forces. Bully for him.

His "service" to the "radio profession" has yet to be established by any
source other than himself.

>When Len is given the opportunity to speak about radio, I listen in
>because there is something to be learned.

How can you know if he's saying anything of value if you don't read all
his posts?

>I also share Len's view that the Morse Code Exam requirement has long,
>long since served its usefulness to the Amateur Radio community, and
>should be retired as a licensing requirement. Should have been
>retired a long time ago.

Lennie's "views" are based upon some personal expression of anger and
angst AGAINST Amateur Radio.

Lennie has absolutely ZERO-POINT-SQUAT minutes of operating an Amateur
Radio Station from which to make an informed opinion.

>Unfortunately, there are some here that don't value Len's service,
>radio knowledge, or opinion of amateur radio licensing requirements,
>or all of the above. They want to exclude Len from the discussion
>based upon no amateur license. As pointed out repeatedly, those who

>license. And in America, every citizen has a voice. Those who are
>tyrants do not believe this, and when they try to silence Len, they
>must be willing to accept any and all repercussions of holding such an
>assinine view.

We "exclude" Lennie becasue Lennie only assumes himself to be "qualified" to discuss anything related to radio since he was an alleged "professional".

Also, his irreverent use of profanity and personal insults against anything that is "not Lennie" does little to endear him to folks here, even those who may be predisposed to agree with his "opinion" on Morse Code testing. No one likes to be associated with a foul-mouthed liar.

>So I don't read all of Lens posts because its just some self-appointed
>Sheriff and him barking at each other.

I am not "barking" at him.

I rub his nose in his frequent newsgroup errors.

Just like I do you.

Thank you, Brian. I respect your military service also.

>When Len is given the opportunity to speak about radio, I listen in
>because there is something to be learned.

It is very rare that the technology of radio is brought up in here,
quite possibly because so few have bothered to learn about it
or practice it...everyone is all concerned with operating and the
state of the art of rank-status-privilege, their collection of old
QST magazines, and the importance of obeying everything that
the ARRL commands them to do.

There is an (unfortunate for all) spitefulness that someone who
has worked IN radio-electronics for over a half century and for
money (gasp!) can possibly comment on anything "amateur."
The spiteful are angry and outraged that anyone disturbs their
pipe dreams of honor and glory and national service of an
essentially avocational activity carried on for personal enjoyment.
They must spin tales, tails twirling, of their "national need" and
medal-worthy imagination of saving future civilization through
heroic fantasy stories about morsemanship in speculative
futures.

>I also share Len's view that the Morse Code Exam requirement has long,
>long since served its usefulness to the Amateur Radio community, and
>should be retired as a licensing requirement. Should have been
>retired a long time ago.

Irrelevant to the long-timers, the self-professed "leaders" of the
"amateur community" who wish to dictate to others that what
they enjoy must be practiced by all others...because they alone

are the imaginary spirit of amateur radio, the ones carrying the symbolic torch of championship of the radio arts and "necessary" communications modes. They have placed their symbolic laurel wreaths (of expertise) on themselves, bravely defending their alleged rights to be better than others in rank-status-privilege. These "experts" disallow any dissent of their god-like opinions for they are above any discussion with mere mortals like you and me.

Meanwhile they are not cognizant that the FCC is still defining International Morse Code to an obsolete ITU-T (not ITU-R) document, CCITT Recommendation F.1 (1984) Division B, I. Morse Code. That was still in the very official regulations' definitions at 94.3 (a) (27) as of 1 October 2003. They don't know what is contained within that Recommendation because it is only available from the ITU and for a fee...or that it has been superseded in nomenclature and some changes (other than the astounding and oh-so-important addition of the @ character to the standard set) by the ITU-T; the CCITT itself has been superseded entire by the ITU-T. The CCITT document never defined a telegraphic "word" either in size or for rate, it only defined the relative length of dot, dash, and spacings. [you know this because I e-mailed a direct copy of my ITU-T document file to you as a favor] Instead, the arguments in here have raged on solely on the basis of "everyone knows this!" as if all law and regulations are based on some paranormal common knowledge.

>Unfortunately, there are some here that don't value Len's service,
>radio knowledge, or opinion of amateur radio licensing requirements,
>or all of the above. They want to exclude Len from the discussion
>based upon no amateur license. As pointed out repeatedly, those who
>make and enforce the regulations are not required to hold an amateur
>license.

Irrelevant to the self-professed "leaders" and gods of amateurism. Reality has no place in imaginary fantasyland imaginations of glory and honor and national service through amateurism.

>And in America, every citizen has a voice.

The First Amendment Rights have been overruled by these self-professed "leaders." Evidence of that exists in the public view on proceeding 98-143 for 25 January 1999.

>Those who are
>tyrants do not believe this, and when they try to silence Len, they
>must be willing to accept any and all repercussions of holding such an
>assinine view.

Independent thought is not allowed in here. All must obey the dictates of the self-professed "leaders" of amateurism in radio.

These "leaders" are without fault...all who disagree with them
are rewarded by a barrage of personal insults instead of
addressing the subject under discussion. The "leaders" rule
by barbarian warlord tactics of neighborhood gangsterism in
messaging.

>So I don't read all of Lens posts because its just some self-appointed
>Sheriff and him barking at each other.

That is how it should be.

A problem for casual readers in here is that the "leaders" cannot
survive arguments on the subject which contradict their cherished
myths and fables. The end result is much wasted time of these
individual "message warlords" competeting for personal status
as newsgroup "leaders." Among these regular "leaders" it doesn't
matter whether the subject is about amateur radio, it is all
concerned with the righteousness of their personal opinion
triumphing for them in any way possible. Amateur radio policy
is far down on the list topped by their Need To Be RIGHT!.

And that is how it is.

He will mention the appropriate ARRL news item or notice. :-)

ARRL is a Final Authority, oracle of all amateur radio.

[as of the end of 2003, ARRL membership had shrunk to 21.3%
of all licensed U.S. radio amateurs}

>> Therefore, the use of
>> Farnsworth spaced Morse Code had a legal basis.

But only AFTER the FCC approval.

There was NOT any specific definition of "word rate" either stated
or referenced in Part 97, Title 47 C.F.R., before, during, or after
that "approval" by the FCC. There still isn't.

>> In addition, anyone who prefers non-Farnsworth-spaced Morse Code for their

Nowadays one can download a copy off the 'net. Of course one needs to know what
"pecuniary" means, and such. Which means that you can't use a 2 meter repeater to
dispatch taxi cabs, or if you're a real estate agent to auto-patch call your office to
work a house sale. Nowadays with cell phones, I doubt anyone would consider
doing this. This rule is a good one; it keeps businesses from invading our bands
and taking over (lawsuits over QRM, anyone?).

Ever enforcement action anyone who truly didn't know that they were violating
some rule? I'm sure everyone who ever maliciously QRMed someone knew full
well that that is against the rules. Maybe once in a great while you find someone
who say set up a reverse autopatch on their repeater to respond to incoming
calls from the phone company. Heard someone did that and thought it was okay if
the machine just said "incoming call, press * to allow caller's voice to be transmitted".
Seems that there was still the problem that an unlicensed caller could do something
to make a ham transmitter key up even though they couldn't talk over it yet.

All currently available study guides, commercial tapes and CDs and software
trainers, and almost all shareware/freeware software trainers specifically
tell the prospective student that the exams are given using the Farnsworth
spacing for the 5wpm test. There is NO excuse for not knowing this.
Training tapes and records using 5wpm letter speeds would have to be quite
old.

Everyone has indicated that it's great for the individualized emergency instances like a car accident, etc. But it has no place in widespread emergencies like hurricanes, earthquakes and so on as it simply can't be counted on under that type of condition.

I've allowed not amateurs to use my station, and I'm still the control
op. That's the law.

> > I still think that cellular telephones is a lot better than nothing,

Thank you for noticing that. It has been missed by Robo-nurse and the
unlicensed JJ.

> I doubt that Amateur radio ever filled that local "see an accident and
> call 911" niche. Of course the ham could call using autopatch, but there
> just weren't enough people to give such a coverage as cellphones could.

Prior to decent cell coverage, that's exactly how it was done. Of
course, lots of people bled to death, too. Still do.

> But at least in our area, I can better contact emergency services
> through my HT than I can my cell phone. So that is what I use. Those
> with only cell phone access can try to use that.

Agreed. And some will get through and some will not. Many
non-amateurs actually realize that their cordless telecommunications
device may actually work better by changing position, going outdoors,
or going to a higher elevation, just like in the commercial, "Can you
hear me now?"

But unlicensed JJ and Steve are so certain that everyone else is
stupid.

What you understand is immaterial. We are talking about newcomers to
the service taking their first exam. It's not as if they have a lot
of experience at it.

> >Those who study "non-Farnsworth-spaced" Morse Code may not know enough

Did you mean "assertion, Brian?"

> You've done a side-by-side comparison of different methodologies to
> validate this?

Those who've studied Farnsworth Code pass Farnsworth Exams.

Those who've studied Morse Code typically do not pass Farnsworth
Exams.

> >Just FYI, the "non-Farnsworth-spaced Morse Code" is referred to as
> >Morse Code. You will find references to it in Part 97, but you will

>
> There is NO reference to spacing techniques in Part 97 for Morse Code.

You are a genius.

> There is no "technical specification" for Morse Code in any federal
> regulation that I am aware of. Post one and I will acknowledge it publically.

You said you know Morse Code to 40wpm in contests, and to 25wpm in
routine QSO's.

How can you make that statement?

> Post it, show me a federal law that says THIS is the "Morse Code" that
> MUST be used and I will send you a Savings Bond for $100.

Please send me nothing directly.

> >Considering the number of times that Part 97 has been toyed with, you

>

> English jurisprudence has established that those things not specifically
> prohibited or regulated by law are not illegal...Therefore ARE "legal".

Thus, you find Morse Code required for Exams.

In plain terms, that would be Morse Code.

> >All you repeat again and again is the "non-dissenting FCC opinion."
> >So what is the date of this correspondence?
>
> Has the FCC "dissented" to the use of Farnsworth-spaced Morse Code?

That is what I asked.

> Has it not had the opportunity to intervene if it DID think that it was

Hi gang!

Jerry has a legitimate concern, but I think he misses a point. I honestly believe (and I may take flak) that most folks are reasonably law abiding. Whether hams or cbers, it isn't unlike the traffic situation here. Most folks are reasonably law abiding. By reasonably, I mean most folks stop or slow down to 1 or 2 mph for a stop sign. If it is a rolling stop and no one is coming, is it really wrong to continue? Then there are the flaming idiots like the guy who nearly hit me yesterday. There were problems with a couple of intersections at a bridge connecting the expressway a few years back. People would go into the intersection on yellow even though there was no place to go (cars backed at the second intersection). Consequently, gridlock occured. They fixed that about three years ago with left turn signals, allowing the traffic to clear from the bridge. Now (like the idiot yesterday), some folks stop, see the light also red at the sidestreet, and then gun it and go through the intersection (never mind the fact that the other traffic has a green left turn arrow on). This stupid mentality goes on in our society regardless of a license (amateur or driver) and I would not paint all drivers as stupid or inconsiderate just because of that one licensed driver. Neither would I paint all cbers or amateurs the same way because of the actions of a few.

I suspect I'll be pushing up daisies, however, long before the flames die out around here LOL.

Hope you all have a great day!

73 from Rochester, NY

Maybe if I type r e a l s l o w you might be able to understand. The
ham in question did not break any FCC rules, he had a problem with the
repeater owner who requested he not use the repeater anymore. The FCC in
their letter to the ham plainly states the problem is between the ham
and the repeater owner, there were no FCC rules broken. Again, the ham
was not "busted" because he broke no FCC rules.
Is that too hard for you to understand dipwad? It must be, evidently I
am expecting too much of you as a cber to understand such a simple thing.

He broke the rule of "no malicious interference". However the FCC at this
particular moment simply chose to issue a warning rather than "bust him".
The enforcing agency always has the choice of how far to go in "busting"
someone. The FCC also made it quite clear that the repeater owner has every
right to bar him from the repeater and further that if he continues he will
be subject to enforcement actions.

The FCC recently issued an NAL to the owner of a restaurant in Westville, New Jersey, for the use of a "cordless phone" that operated in the 2 meter band. The owner used it to coordinate take-out deliveries without the cost of a cell phone. FCC had earlier warned the restaurant owner, who stopped using the setup for a time and tried FRS/GMRS. But the FRS/GMRS sets had insufficient range and unreliable coverage, so he went back to using the "cordless phone".

>it's not really clear.

Ask any licensed, currently practicing health care professional. Many carry
more, and some specialties (like obstetrics) carry a lot more. Such coverage is
not inexpensive, and in some areas medical care providers are simply closing
down or moving because of the high cost of malpractice insurance. It is one of
the reasons (not the only one) for the high cost of medical care in the USA.

Hello, Jerry and all

I had previous problems with tires being dumped in the yard of the house behind mine. Repeated calls to the city resulted in nothing - until I obtained the services of an attourney. Within a week, the city cleaned up the mess and billed the owner. ;)

Lately, the city has become *much* more responsive. I suspect the FCC may as well, what with the Janet Jackson debacle. I sent a couple of emails concerning a *lot* of activity next door. Cars stopping, someone going to the house and then leaving withing 60 to 90 seconds. Hmmmm .... one day I saw three cars stopped. Then a van. Then the marked cars pulled up on both sides of the street. I could hear the banging as they searched the house. Flashes as pictures were taken. Three people did not pass go. They did not collect $200.00 LOL. Guess where they went?

Best regards from Rochester, NY
Jim

I did not see anything in the letter metioning malicious interference.
Where did the FCC make state there could possibably be enforcement
actions? They plainly state to the amateur, "you are free to pursue
legal action locally. No Commission hearing procedures are provided in
such matters."

2224. Farnsworth Follies

Newsgroup: rec.radio.amateur.policy
Date: 2004-04-01 03:37:41 UTC
From: Mike Coslo <mcoslo@adelphia.net>
Message-ID: <YeCdnUymX9MYE_bdRVn-tw@adelphia.com>

Let's start a poll on how many years we will be talking about
Farnsworth vs "straight" morse after Element one goes away.

I predict that Farnsworth arguments will be going on around here at
least once per year for at least 10 years after element one disappears.

Len busts our chops about our proclivity to argue trivialities. He's
right about that.

- Mike KB3EIA -

Witness the relatively recent job action by Doctors in Northern NJ.
IIRC, they refused to provide service for one day and publically
protested about that very issue. Many could not understand what "such
well paid" folks could possibly protest over and were visibly put off
on TV news interviews. Sometimes the overhead is simply overlooked.

> and me.

Rhetorical balderdash, it ate up bandwith and let you show off your
vocabulary,

Otherwise it was yet another venomous swipe at Amateur Radio....the same
kind of stugg that earns you your own rank-status-priviledge as King-of-the
Hill of mudslinging.

> Meanwhile they are not cognizant that the FCC is still defining

> Reality has no place in imaginary fantasyland imaginations of
> glory and honor and national service through amateurism.

The "glory and honor (of) national service through amateurism (sic)" is
not one proffed by the Amateru community itself...It comes from countless
private and governmental agencies.

>>And in America, every citizen has a voice.
>
> The First Amendment Rights have been overruled by these
> self-professed "leaders." Evidence of that exists in the public
> view on proceeding 98-143 for 25 January 1999.

Too bed that those 14 years of night school didn't teach you about the
Bill of Rights, Lennie.

You need to re-read them and see to whom the amendment applies. (hint:
it prevents the federal government from interfereing with the press...it does
not address private citizens.)

>>Those who are
>>tyrants do not believe this, and when they try to silence Len, they

Yeah...I see that "independent thought" with you hand up Brain's backside
to manipulate his mouth for you. Do you really try the "ventrilloquist" trick,
or do you use a tape recorder?

>>So I don't read all of Lens posts because its just some self-appointed
>>Sheriff and him barking at each other.
>
> That is how it should be.

Actually it allows Brainless to formulate "opinions" based upon
less-than-consistent rantings from his "mentor". Unfortunately for the two of
you (and Brain moreso than Lennie), you are the only one's who can't appreciate
the humor of Brian's posts as he tries to follow in Lennie's "footsteps"...

> A problem for casual readers in here is that the "leaders" cannot

>Thus, you find Morse Code required for Exams.

I find Morse Code required for the General Class and the Amateur Extra
based upon FCC rules and regulations, and in appreciation for the on-going
"discussion' in public forums to determine if it will remain a requirement in
the future.

Do you disagree that FCC rules and regulations dictate the demonstration
of Morse Code proficiency skills in ELement 1?

>In plain terms, that would be Morse Code.

No kiddin', eh...?!?! I figgered you were just pulling that one out of
your hat.

>I believe that the FCC is unaware.

I believe you're an idiot. It's been well documented in this forum form
the last couple of weeks. Nice job.

> I think itï¿½s possessed by an evil ghost because it kills people and
> collects their brains.
>
> What can I do?

Interesting problem....

This is a common problem with some radios. The radio is sending out
invisible electromagnetic rays which suck the brains out of people. In
most parts of the world there is a easy solution to this problem, it simply
involves disconnecting the power source (the battery or the electric socket).

However I noticed that you were posting from a New Zealand address. This
complicates matters, since you are on the underside of the world, certain
physical laws work differently.

The first thing you need to do is to turn your radio off.

The next thing you need to do is to protect yourself from the harmful rays.
Fortunately these rays are easily blocked by simple shielding, so get a
baseball cap, and line it with aluminium foil and wear it. This will prevent
any reverse waves from getting into your brain.

After shielding your brain, you will need to reverse the power connection to
the radio. This can easily be accomplished by inserting the line cord into
socket upside down, reversing the polarity of the batteries, or swapping the
red and black wires coming out of the back of the radio around. Make sure
the radio is off when you do this.

After reversing the power connections, you will need to submerge the radio's
antenna into a bucket of beer. This will allow the radio to extract the
essential life fluids from the brew and retransmit it to the people whose
brains were extracted.

After placing the radio into the bucket, drink any remaining beer that you
might have lying about. This is an important step, as it will flood your
body with additional essential fluids.

The final step is to reach into the bucket and turn the radio on. After
doing this the radio should restore all of the brains that it has stolen. If
this step is not successful, you must have done something incorrect so check
your wiring and repeat from the reverse polarity step.

Or a person making decisions for a youth sports organization. when I
was the president of the local hockey club, I was insured for multiple
millions of dollars. When you have to deal with two or more sets of
rabid parents, each threatening to sue if the decision you make is not
in their favor, you get to appreciate the insurance.

When Mr and Mrs Smith are absolutely certain that little Johnny isn't
going to go to the NHL because your coach isn't playing them every other
shift and not putting him on the first line, and Mr and Mrs Johnson are
certain of the same thing, which of course interferes with the Smith's
up and coming Hockey star's High school hockey career, you get a bit jaded.

Dr. Jimmy, did you learn that in the ARRL Study Guide?
Bash book?

What does MALPRACTICE really mean?

Does it have "Farnsworth spacing?"

My diagnosis is that this topic doesn't belong in this newsgroup.
Sue my insurance carrier if you don't like that opinion... :-)

My prognosis is a lot of Chat Room nattering by the regulars.

Unaware? I'd say so just on the Commissioners' statements
whooping and hollering about Access BPL at the back end of
NPRM 04-29. They are UNAWARE of the most basic things
about RF transmission lines. QED.

>Deal with it.

There's nothing to "deal with, Brain.

"We" were discussing Amateur Radio's role in emeergency communications.\

For what ever reason, you were trying to trivialize that role by
representing "cellphones" and "unlicensed servcies" as playing a "major role"
in "emergency comms", but only within the scope of "Joe Average" calling for
help on his cellphone under what one can call "routine" circumstances.

No problem. You were trying to make the circumstances fit your rant. It
didn't work and you got your nose tweaked in the process.

>That was the context in which I made my statement, Steve.

After a weeks worth of trying to wriggle out from under the stone YOU had
crawled under, Brain.

> making what would be considered a "routine" 9-1-1 call under "normal"
>> circumstances you'd be correct.
>
>Steve, what 911 calls are made under normal, routine circumstances?

I've never made 911 calls in a day.

I've made calls to the 9-1-1 center though, and to "me", a person who
WORKS in the 9-1-1 enviroment, car accidents, lost persons, shots fired, etc

are "routine" calls.

Loss of communicaitons due to wild fire, flood, tornadoes, etc, are not.
I've tried to differentiate the difference to you, but you keeep wanting to
ONLY define your scope of discussion to that which supports your ranting and
which would, on the face of it, trivialize Amateur Radio's role.

It didn't work.

>> In the scope of "emergency communications" as it pertains to the
>Amateur
>> Radio Service and within the scope of discussion OF "emergency
>communications,
>> you ae still trying to compare apples and oranges.
>
>Nope. Amateur radio emergency communications are not limited to
>Continuity of Government operations only.
>
>> Your bad. Try again.
>
>You're bass ackwards. Again.

Hardly.

I am discussing TRUE "major role" emergency communications. YOU are
talking about Joe Average neding a cop for an accident or reporting a dumpster
fire.

As usual, you're out-of-step with current events.

Try again, PuppetBoy.

>Sounds like you're going down on JJ's boat.

At least we can throw him a life preserver.

You, on the otherhand, are going down on Lennie.

That we can't help you with.

Enjoy.

>Thank you for noticing that. It has been missed by Robo-nurse and the
>unlicensed JJ.

No I've not.

YOU have been trying to limit the scope of "emergency comms" to that of
Joe Average reporting an accident or calling the FD for a dumpster fire.

In the context of "emergency comms" wherein Amateur Radio plays a role is
a far greater scoe of impact on the community involved.

You just needed to make the circumstances fir the rant, Brain.

It didn't work.

>But unlicensed JJ and Steve are so certain that everyone else is
>stupid.

Not "everyone else", Brain.

Just you. You have, afterall, provided so much evidence in support of my
allegations.

Thanks.

Yep...that's about right.

Remember, there can be multiple suits involving different complaintants.

OB-GYN docs especially are dropping like flies due to the insurance. It's
tragic.

While in SoCal, one of thje ER docs I worked with showed us his dilemma...

Before taxes (1988) he was making almost $2M between his practice, his ER coverage and his investments.

Malpractice ALONE (and this was an MD NEVER sued before) was over $70,000.

That sucks.

But is it medical malpractice when one out of a million dies from a vaccination? How can a physician predict who that might be? Should he be sued over it? These days he can and for a huge sum. He's following the best medical practices yet he is held liable when that one of a million occurs.

In some states, you can know longer get your child's immunizations administered at your pediatrician's office for this very reason. Instead you have to go to the county board of health and sign a form that says you have been told that there are occasional deaths and you can't sue the government.

Some are. His view of retiring the Morse or Farnsworth Exams are not.
They are widely held views by amateurs who have passed such exams and
those who have not.

You'll just have to get over it.

> Lennie has absolutely ZERO-POINT-SQUAT minutes of operating an Amateur
> Radio Station from which to make an informed opinion.

So you say the physics of amateur radio are something special and
unique.

> >Unfortunately, there are some here that don't value Len's service,

> We "exclude" Lennie becasue Lennie only assumes himself to be "qualified"
> to discuss anything related to radio since he was an alleged "professional".

See???

"Len is not an amateur, therefore Len can know nothing about amateur
radio."

Why do you insist on being wrong all of the time?

Do you enjoy being that kook ex-Marine that everyone thinks has
post-traumatic stress syndrome?

But never saw combat.

> Also, his irreverent use of profanity

Now there is a reverent use of profanity?

and personal insults against anything
> that is "not Lennie" does little to endear him to folks here, even those who
> may be predisposed to agree with his "opinion" on Morse Code testing. No one
> likes to be associated with a foul-mouthed liar.

You do nothing to endear yourself to folks here, either.

You behave badly. You are an embarassment to the amateur community
and to RRAP.

> >So I don't read all of Lens posts because its just some self-appointed
> >Sheriff and him barking at each other.
>
> I am not "barking" at him.

Oh, my. I guess since I'm not a dog I cannot recognize barking?

> I rub his nose in his frequent newsgroup errors.

As I rub your nose in every carpet stain that you leave here.

> Just like I do you.

So you say.

He's made several claims on here that he is selective who he would
treat in an emergency. No wonder they have to pay so much in
insurance premiums on kooks like him. No wonder there are so many law
suits.

Well hell Oxenduff, why not give equal time to all & repetitively troll
about it in the appropriate newsgroups like you do your stereotypical
truckdriver crap in this newsgroup?

Maybe alt.psychotic.dipshit.radio.asskissers is even a better newsgroup for
you to spend time in?

Tom

Ackshully, by the steamy one's "logic," absolutely nobody could get
their first amateur radio license. "They don't know anything about it!"
They wouldn't be able to pass any tests. No get license from FCC.

>Why do you insist on being wrong all of the time?

Steam-inflated ego does it for him.

>Do you enjoy being that kook ex-Marine that everyone thinks has
>post-traumatic stress syndrome?

I don't know what he got, but whatever it is nobody should have!

He done got a medical discharge he say. But, he say he got
a pilot license and derefour he done pass a flight physical.

>But never saw combat.

Hey! He done say he got "SEVEN HOSTILE ACTIONS" in da
military! He no say where or when, but dat be "irreverent."

>> Also, his irreverent use of profanity
>
>Now there is a reverent use of profanity?

It must be those ministers he hang out wid.

> Extra - 105,152 (increase of 26,402)
> Total - 682,344 (increase of 7,552)

But compared to March 31 of 2003 when
the total was 685,432 we have a 12 month
decrease of 3000.

Additionally, there are some "heavy"
concentrations of license expirations coming up
in the next several months which, I think, will
see our total licenses drop below 680K and
maybe below the March 2000 number.

Cheersm

>> Len served in the Armed Forces. Bully for him.
>
>Bully for you. He paved the way for your lame self.

Lennie didn't "pave the way" for ANYthing I did in the Armed Forces,
Brain.

Different branches...Different motivations for serving...Different
MOS's...

>His detractors have established his service. They fear his knowledge.

Let's get one thing straight, PuppetBoy...

If you and Sir Scummy pulled up in fornt of my home with an Abrams tank,
locked, loaded and at point-blank-range, I'd STILL not have anything to fear
from either of you.

>Why are they so upset?

Because we don't tolerate liars and people who intentionally misrepresent
something we clearly know to be not true.

>> Lennie's "views" are based upon some personal expression of anger and
>> angst AGAINST Amateur Radio.
>
>Some are. His view of retiring the Morse or Farnsworth Exams are not.
> They are widely held views by amateurs who have passed such exams and
>those who have not.

...and absolutely no practical experience in Amateur Radio on which to
determine if the opinions of others are valid or not.

>You'll just have to get over it.

Get over what?

That he's talking out of the wrong orifice? Or that YOU are?

I hardly think so!

>> Lennie has absolutely ZERO-POINT-SQUAT minutes of operating an Amateur
>> Radio Station from which to make an informed opinion.
>
>So you say the physics of amateur radio are something special and
>unique.
>
>> >Unfortunately, there are some here that don't value Len's service,

>See???

See what?

That Lennie has, BY HIS OWN ADMISSION, no practical experience in Amateur
Radio?

>"Len is not an amateur, therefore Len can know nothing about amateur
>radio."
>
>Why do you insist on being wrong all of the time?

I am not wrong.

Lennie knows lots-and-lots about radio THEORY.

He knows almost NOTHING of APPLICATION as it pertains to AMATEUR RADIO.

>Do you enjoy being that kook ex-Marine that everyone thinks has
>post-traumatic stress syndrome?

OK, Brain...

YOU made another assertion of fact.

From what source did you obtain THAT suggestion, OTHER than to make it up.

>But never saw combat.

Sorry for you, Brain...Been there...Done that.

>> Also, his irreverent use of profanity
>
>Now there is a reverent use of profanity?

Nope.

> and personal insults against anything
>> that is "not Lennie" does little to endear him to folks here, even those
>who
>> may be predisposed to agree with his "opinion" on Morse Code testing. No
>one
>> likes to be associated with a foul-mouthed liar.
>
>You do nothing to endear yourself to folks here, either.

But I don't lie and I don't misrepresent things that are KNOWN to be
otherwise, Brain.

That you and your scumbag "mentor" find that makes you uncomfortable is
YOUR tough luck...Not mine.

>You behave badly. You are an embarassment to the amateur community
>and to RRAP.

Uh huh...Right.

>> >So I don't read all of Lens posts because its just some self-appointed
>> >Sheriff and him barking at each other.
>>
>> I am not "barking" at him.
>
>Oh, my. I guess since I'm not a dog I cannot recognize barking?

What "barking", Brain.

Nothing of what I see here comes even close to what my Webster's defines
as "barking".

>> I rub his nose in his frequent newsgroup errors.
>
>As I rub your nose in every carpet stain that you leave here.

Such as..?!?! All the stories I've told about operating illegally from
Somalia? The unfounded assertions I've made about "emergency comms"...?!?!

>> Just like I do you.
>
>So you say.

So I've proved. Again.

>occurs.

And even if he/she wins, the lawyers have to be paid.

Add to that the fact that many malpractice suits go after everyone that was anywhere near the patient - doctors, nurses, techs, the hospital or medical group itself, etc. Even if they all win they have to defend themselves.

Yes, there *are* some incompetent health care providers out there making mistakes that injure and kill people. They are few, but their mistakes raise the cost of every provider's malpractice insurance. And regardless of actual income, health care providers and their insurers are often seen as "deep pockets".

I hadn't heard that one, Dee. A true Catch-22 situation, because many immunizations are required by law in order for a kid to go to school.

And from a medical and scientific standpoint, the risk of the disease is far worse than the risk of the immunization.

I don't know when this started but I know that this was the case in Ohio in 1987 when my younger daughter was born. The fact that states require the immunizations for school is why the county boards of health were required to make the shots available to all at cost. While they were actually cheaper via the county board of health, there was often no physician on hand in case of problems.

Yes many people are unaware of the death rates from some of these diseases. For example, the death rate among children who caught whooping cough was 50%.

I know "rocket science" after working three years at
Rocketdyne Division of Rockwell International, the makers
of the Space Shuttle Main Engine and the F1 main-stage
engines of the Saturn Rocket (Apollo Program lifter).

I've also had four other [expletive deleted] radio licenses.

[Rev. Jim don' lak no cuss words in heah, he say dat...]

Over a half century ago I was OPERATING on HF with not
one, but 43 transmitters each 8 hour shift...plus the VHF,
UHF, and microwave radio relay equipment associated
with it.

At no time in my career have I been required to know or to
use morse code to legally transmit on HF. In order to
transmit on HF in the U.S. ham bands I MUST test for that.
Why? No other radio service requires anything of the kind.

This newsgroup isn't moderated, doesn't have restricted
access. No ham license (from either FCC or FDA) is
required in here. It sounds fishy that you have a beef with
someone in here and I'd say y'all just laid a aig.

Until you close off this place to any but "your own kind,"
I be here when _I_ want to be here. You can bet your
[expletive deleted] [expletive deleted] on that, [expletive
deleted] !

Have fun with all the rest of the mental seven-year-old
extras.

I didn't know it was that bad.

There is also a lot of bad science out there involving immunizations. For
example, there are still folks trying to sell the idea that immunizations are
somehow a cause of autism, even though repeated scientific studies have shown
no causality. There *is* a sort of correlation in that the first definitive
signs of autism are usually observed about the age of many common
immunizations.

The bean counters at Lily figure in the cost of a human life into
their sales.

The attorneys at Lilly manage to cut that cost in half.

> In some states, you can know longer get your child's immunizations

Then there are other attorneys that say you can sue the governemnt not
matter what form you sign.

Yup. Like you, most people don't know how high the fatality rate was. The reason is simple. Whooping cough, the Pertussis in DPT, was a very serious disease. However very, very few people have ever seen a case. It was pretty much brought under control 50 years or more ago. People have seen the wide variety of stuff lumped under "croup" and have mis-applied the term whooping cough to various severe coughs but they are not the same thing.

Even if there were a causal effect, the odds of this happening are so very much lower than the odds of dying should the child contract Whooping Cough that it's far better to get the immunizations.

Back peddle. Tap dance. Cover up what you know you meant.

You really should stop making stupid statements concerning who you
would and would not treat in your profession.

You might goof one day and this stuff comes back to haunt you.

You were "mistruthful" with your minister and UCMJ nonsense. Either
it was or it was not relevant.

You bring it up as if it were relevant, then when I address it, you
say it wasn't relevant.

You just talk nonsense, day after day.

Congratulations, kook.

You've never been to Saomalia.

You've never been to a country without a government.

But now you're an instant expert. There were other instant experts on
here, some even with vast, vast years experience operating from
countries -with- viable governments, who were proven wrong.

Instead of having learned something, you puff out your chest and give advice.

Hi hi.

Next thing you know you'll be sending out QSL cards, having never set foot in-country. Just like your coveted box full of military medals that you didn't earn. Walter Kooky style.

Time will tell. The renewal rules confuse the situation because you cannot
renew more than 90 days before expiration, but you can let the license expire
and then renew in the 2 year grace period.

The big question is: why such slow growth even after the restructuring of 2000?

You lie to yourself. You believe your own lies. Ergo, no conflict
with lying to others.

2305. Proposal to rename RRAP ... (was - Re: New Candidate for 'Youngest Extra')

Newsgroup: rec.radio.amateur.policy
Date: 2004-04-03 01:48:34 UTC
From: "Carl R. Stevenson" <wk3cqth@wk3c.com>
Message-ID: <wJacnUKC5tuchfPdUSdV9g@ptd.net>
Source record: 90369

I hereby propose that we rename RRAP to "rec.Steve, Len, and a few others
rag on each other endlessly.alt"
and create a new newsgroup for those of us who really would like to discuss
amateur radio regulatory and policy
issues ...

I'm getting REALLY tired of all of this endless, childish bickering that is
OT and doesn't belong here ...
most days, it's hard to find the stuff that this newsgroup is supposed to
be for because of the volume
of petty, personal bickering that you guys load the newsgroup up with ...

Or, alternatively, you guys can go rag on each other in
rec.radio.amateur.misc like it used to be (and why
this group was created in the first place if memory serves me correctly - to
provide a place for the serious
regulatory/policy discussion after rec.radio.amateur.misc turned into the
sort of argue_about_off_topic_things
fest that you guys have going on here ...

OK, there ... I've said my peace and now you can tell me to [expletive
deleted for Jim's benefit] off ...

Carl - wk3c

Just an FYI. Any license that is expired but still in the grace period is
not listed as expired until after the grace period is over.

The very success of immunizations has been a big part of the
controversy sround their continued use. "After all, no one gets these
diseases anymore, so why should we immunize for them?"

Stupid logic, but there are some pretty stupid people out there.

If they think immunizations are bad, they should see how bad not
immunization is.

Newsgroup BPL, Carl. If there is an upside to this sad state of affairs, it is pretty easy to see who all is posting the acrimony and avoid it.

Same for "flu" and "influenza". Etc.

I recall a documentary about Dr. Benjamin Spock, who was born in the year 1900.
At that time, the death rate for American babies was 10% in the first year -
that is, 1 in 10 babies born alive in the USA were dead before their first
birthday. I don't know the exact rate today but it's a lot lower.

But that requires understanding the nature of risk and the consequences of the
various choices. And some math.

That depends on how the data is compiled.

The numbers I post here do not include licenses in the grace period. Neither do
those on the AH0A website.

>Wi-Fi.
>
Some form of special modem is needed for BPL, and it is proprietary to the
particular system in use because they're all different. Your cable modem and
DSL prices are higher than we pay here ($43 and $30, respectively) and the
prices keep dropping. Verizon, for one, offers package deals where POTS, DSL
and cell phone service are all bundled together for a very reasonable price.

There are some new BPL articles on the ARRL website. Worth a read.

Agreed. And of course the reason such diseases are almost gone is - universal
immunization.

>Stupid logic, but there are some pretty stupid people out there.
>
>If they think immunizations are bad, they should see how bad not

Yep. This is one reason why the study of history - real history - is so
important.

>tested. If the ARRL proposal gets the nod, the same would
>be true for Novice and Generals on HF also.
>
There are all sorts of things hams are allowed to do without being tested, or without being tested in depth. For example, a ham who passed the tests before, say, PSK-31 was invented is still allowed to use that mode without being tested. But that does not mean no test is needed, or that the current tests should not have PSK-31 in them because the old tests didn't.

>> Some other services use it too, but not to any great

NONE of the tests were EVER intended to be "lid filters". They were a means to require a certain basic knowledge to allow people into radio. Further testing was intended to motivate people to expand their knowledge by awarding privileges to those who did undertake the self-learning and development.

This is why it is not necessary to have a direct tie between material tested and privileges awarded. Instead you tie the most desireable priviliges not to the type of material but to information and skills that they should have but don't want to learn. This is the way society, in general, works.

tests
> should not have PSK-31 in them because the old tests didn't.

But the morse test is a skill test that someone can pass and
know nothing about the technical aspects of using morse
code. On a par with PSK-31, it would be like having
a keyboard test of sending PSK-31.

> >> Some other services use it too, but not to any great

> There is still some maritime Morse code use,

And the liklihood of any ham needing or using morse
code to engage in a contact with such a morse
maritime operation is nil.

> and it is used for ID in some applications.

And why would any ham need to know morse to understand
such an ID?

> >> >The FCC isn't

> even the most privileged license to require
> no skill in its use makes no sense.

WHY? No one is required to exhibiit ANY specific skill
in the USE of any other mode. The fact that hams around
the globe use languages other than English doesn't require
any specific ham to exhibit or show an ability to speak
English or any other language.

> >> >Code isn't a lid filter,

I repeat, no test in any way is a lid filter.

> >> Particularly not a test given one time.
> >> There are bad doctors, lawyers, engineers, etc., who have been through

> >
> >I repeat...NO test is a lid filter.
>
> If that's true, why have tests at all?

The tests for ham radio are NOT intended to ferret out
idiots and jerks who, having passed a test, decide they
don't want to operate within FCC rules or the rules
of common courtesy.

> No test is a *perfect* lid filter.

Ditto my prior comments again.

> >> > as witness
> >> >14.313 back in the days of 13wpm to be allowed to operate there.

> >waivers?
>
> Nope - but neither is it safe to assume that none of them did.

Agreed, but as long as one passed a code test of 13 or even 20
wpm, then your comment about waivers is invalid. Yes, some
may have gotton there with a waiver...but not all.

> >> Remember this:
> >> All those folks on 14.313, 3950,

> >> Most of them passed multiple written
> >> exams yet they broke the rules anyway.
> >> So obviously those written tests aren't a
> >> perfect lid filter either.
>
> Note that I wrote "perfect lid filter".

I repeat again, none of the ham tests today or in the
past ever had any expectation of keeping out 'lids'.
Knowledge of right and wrong itself has never
prevented some people from violating the law. We
see that everywhere...from petty criminals to such
well educated proffesions as legal, clergy, politics,
accountantants, medical...etc. No proffesion, regardless
of the knowledge one needs or is tested for to gain
entrance has ever been able to devise any specific
testing to exclude the equivalent of "lids." Perhaps
some professions (e.g. police) make a more concerted
effort via the use of pschological testing and evaluations
but even those don't screen all bad apples.

> >> Shall we dump the rules and regs from those
> >> written exams because they didn't do the job?
> >>
> >> oh wait, that's what NCVEC is
> >> proposing for the entry level!
> >
> >A point we agree on.
> >
> Exactly.

BUT, again, knowledge of rules has never, in itself, served
as a deterent to people who choose to deliberately (note
I said deliberately, not by virtue of lack of knowledge)
break the rules.

Cheers,
Bill K2UNK

Jim is 100% accurate on that.
Towards that point, if we add grace
period expirations to the 684K total it would probably
be over 800K hams.

Cheers,
Bill K2UNK

Gentlemen, your comments are well spoken and have much merit.

I wonder why, however, many of you selectively decide when to complain
about the "noise".

Myself and others have "sponsored" many-a-thread championing spectrum
protection, VE testing integrity and other "on topic" (ie: policy subjects)
only to have most of you presently commenting (with the exception of Mike
```

Coslo) pulling the "topics" into the usual 'know code/no code' silliness and worn out rhetoric, often deteriorating into the "stupid bickering about individual and personalities" that you presently lament.

I do believe it to be a bit of hypocracy, Gentlemen.

We'll see.

I am not the one professing to have "operated" from Somalia...Nor am I the one professing admiration for a known liar or making assinine statements about "emergency comms" I can't back up.

>You've never been to Saomalia.

I dare say you haven't either, "Brain".

>You've never been to a country without a government.

And you know this...how?

>But now you're an instant expert. There were other instant experts on
>here, some even with vast, vast years experience operating from
>countries -with- viable governments, who were proven wrong.

I am not an "instant" anything.

YOU have made assertions over the past two years you STILL haven't validated.

>Instead of having learned something, you puff out your chest and give
>advice.

"...learned something"...?!?!

What?

How to lie? How to make a fool of myself in a public forum?

If I've "puffed out (my) chest" it's been from laughning so hard.

>Hi hi.

A bit more enthusiastically than that, Brain.

>Next thing you know you'll be sending out QSL cards, having never set
>foot in-country.

I've never sent a QSL card from a locale I didn't have authorization to operate from, Brain, including the high seas.

>Just like your coveted box full of military medals
>that you didn't earn. Walter Kooky style.

A "box full of medals" collected...never worn. Just like some people collect patches from police or fire departments.

But that was clearly stated then too.

Your creep factor just edged a bit higher, Brain.

Nice try, but lackluster as usual.

See you at Dayton this year?

Brain, you have yet to answer my question as to WHAT FCC or federal law mandated any "declaration" about using Farnsworth methodology for code test preparation.

You DO have an answer, don't you?

I've read Part 97 a couple times and find nothing there that mandates it.

And I am also awaiting your answer as to WHAT "specification" exists for "Morse Code".

More assertions without validation? Or is it OPINION, expressed just because you like to see your name in print...?!?!

>
>What are you talking about?

You're harrassing Dee about some perceived failure of the ARRL to
"announce" that they used "Farnsworth" methodology for code test preparation.

I want you to please provide some reference to a law, regulation or other
federal mandate that directed them to do so.

Also, since you are insinuating that some 'specification' has not been
met, I'd like for you to provide us with a URL or other reference to said
'specification' as to HOW a code test should be prepared.

I guess it all depends on how we define "lid filter".

If it means that some sort of test is supposed to guarantee that everyone who passes it will somehow be a fully qualified, skilled, courteous, law-abiding radio amateur who will advance the state of the art, then there is no such test and no test was ever intended to do that job.

But if it means that the test will help to insure that those who pass it have at least some minimum level of qualifications (knowledge and skill) to be hams....

It all boils down to what constitutes "basic knowledge to allow people into [amateur] radio". For some that includes a basic test of Morse code skill, for some others it does not. For some it includes technical and regulatory knowledge and for others it does not.

>Further
>testing was intended to motivate people to expand their knowledge by
>awarding privileges to those who did undertake the self-learning and
>development.

Agreed - all the way back into the 1930s, when the Class A license was invented. Or even earlier, if we count the old Amateur Extra First Class license.

>This is why it is not necessary to have a direct tie between material tested
>and privileges awarded. Instead you tie the most desireable priviliges not
>to the type of material but to information and skills that they should have
>but don't want to learn.

That's an excellent point, Dee. But it's exactly what some people call "jumping through hoops", "hazing rituals", "giving out gold stars" and such.

Now we see the same arguments that were used against the code test being used against the written test in the NCVEC proposal. How do we argue against it?

Unless I am mistaken, at least one of the folks behind the NCVEC petition was/is on the NoCode International board. And the whole thing was clearly laid out in the "21st Century" paper.

>This is the way society, in general, works.

Agreed.

As a point of historical comparison, Steve, I wonder if "back in the
good ol' days" the FCC itself tested using Farnsworth Morse? Anyone know?

I'm not necessarily looking for a "lid filter". But I do believe that having a certain minimum level of knowledge, be that Morse code testing or the written testing, makes for ensuring that the applicant really wants to be a ham and isn't just getting a license because they didn't have anything else to do one weekend.

Obviously others differ.

And many are unaware of the mental death rate of intelligence due
to the intellectually-toxic effects of too much morse code.

By the way, this newsgroup is about amateur radio policy, not the
state of the medical or medicinal arts. The FCC doesn't regulate
medicine in the USA even though some of their regulations and
rulings are a bitter pill for some to swallow. :-)

Good luck on your search for the proper venue to lend your medical
expertise and needling to some other group.

Tsk, tsk, tsk...ugly little comment from an ugly little person.

Members of the Technical Staff III didn't do janitorial services at Rocketdyne. That was my work title and may be checked by inquiry of Personell Department, Rocketdyne Division of Boeing Aircraft [Boeing purchased the Rocketdyne Division from Rockwell International after I left them]. My group was Electronic Instrumentation and assisted many different project groups. My tasks were with the instrumentation and sensor interface for the Deformable Mirror program (part of the "Star Wars" work spread all over the country); instrumentation for Solar One, the 50 MWe solar experimental power generation plant built at Barstow, CA, (McDonnell-Douglas, Huntington Beach, CA was prime contractor on instrumentation, Rocketdyne supplied the solar boiler and underground heat storage - for darkness periods); experimental liquid oxygen flow measurement for the SSME or Space Shuttle Main Engine (cannot yet be safely directly measured by any conventional flowmeter).

The Deformable Mirror program required actual deformation of the mirror surface by actuators altering the surface by nanometer distances accurately through an incorporated Bragg Cell dual

interferometer as the initial surface sensor and a phase-frequency detector comparing the two interferometer outputs with a 16-bit minicomputer program calculating the required mirror surface information and actuators' necessary motion to achieve a desired deformation. Deformable mirrors are now used in many astronomical observatories for both focus and astigmatic correction of distortion due to the earth atmosphere variability. My specific contribution - besides being part of the team that organized the electronics and computer interface - was a variation of the common phase-frequency detector of PLLs optimized for linearity and elimination of the very narrow "dead zone" at zero-phase. The Bragg Cell outputs were at 39 and 40 MHz, the mixer (after squaring) was digital. That was in 1980. The contractee was the Department of Defense.

Solar One was a "local" project sponsored by all the Greater Los Angeles electric power utilities. Rocketdyne's work with very high temperature alloys and cooling with rocket engine "bells" was a natural for the steam-generating boiler at the focus of hundreds of heliostats (moveable mirrors reflecting the sunlight to the single focus of the boiler). I got that assignment due to illness leave of another MTS and the ability to work with very-non-radio Piping and Instrumentation (in industrial applications) and the ubiquitous 4 to 20 mA wired sensor link systems and their subsequent interface to the MacDac control midicomputer (32-bit word length). That was in 1981.

The SSME LOX flow sensor project attempted to solve a very old problem with conventional flow meters in that liquid oxygen wants to "eat" any parts directly in the flow. Several attempts were made to use ultrasonic waves directed at a slant through the main LOX piping, that in the enormous high-level broadband noise environment when the throttleable SSME is at working thrust (350,000 pounds thrust at 110% throttle). After many firings at the Santa Susanna Field Laboratories' test stand "Coca" that proved unsuccessful. The method was eventually ruled out due to internal LOX density disturbances that negated any sort of induced wavefront rate. At present, LOX flow rate is inferred from relative temperature (non-contact) sensors into a strap-on, very-high-shock/vibration-rated computer mounted on each SSME. That same computer is the link to/from the shuttle pilots and flight computer to control the SSMEs. The thrust chamber of each SSME is about the size of a small beach ball yet can provide about 175 tons of push. Fuel is liquid hydrogen, rather more chilly than terrestrial surface fuels. That was in 1982.

There was no sexual involvement involved, only that of connector mating of male and female pins. To the best of my knowledge, no "hermaphroditic" contact pins were used in any connectors.

>>I've also had four other [expletive deleted] radio licenses.
>
> The best [expletive deleted] radio licenses money could buy.

All obtained from the FCC at the FCC's normal fee rate at the
Chicago, IL, and Long Beach, CA, Field Offices.

Only the PLMRS station EQUIPMENT cost any real money,
later recouped on a dissolved partnership business auction.

> But none of them an Amateur Radio license.

Absolutely true...including two of the licenses then required
for Citizens Band in the 1960s. :-)

> Putz.

Absolutely untrue, meshugge goyim. Shalom.

I sing kaddish to the demise of your civility and sensibility.

Probably don't allow you to have a pair of rabbit ears on the TV set.

What I find most intriguing is that the tower was there long before the McMansions were built, so the builders and the buyers were not surprised. Now they're all upset. Just like when the Blue Route was finally built here in the Philadelphia area.

Radio licenses are just a regulatory tool used by the Commission.

Radio operator licenses were never, are still not any form of
academic certificates of achievement. The Commission is not
chartered by law to be an educational or academic agency.

Possession of a radio operator license, any kind, is proof only of
having passed a license test according to Commission regulations.

>This is why it is not necessary to have a direct tie between material tested
>and privileges awarded. Instead you tie the most desireable priviliges not
>to the type of material but to information and skills that they should have
>but don't want to learn. This is the way society, in general, works.

In our [USA] society, laws and regulations have been decided largely
by political and legislative actions. Learning ability and qualifications
in the same are tested and graded by academic organizations. The
FCC is not an academic organization.

There is no evidenciary Divine Law which dictates certain avocational
radio activity "must" be done in a certain way or that certain skills
and knowledge "must" be possessed, nor is there any Divine
Judgement which ascertains the sagacity of such "musts." There are
only self-righteous, sanctimonious self-styled "radio gods" who
demand obediance to certain "rules" because they think all should
think like they do. Through political pressure, many of those "rules"
make it into codified law...ergo, it is "right." :-)

Now back to more interesting amateur radio policy discussions concerning immunization, medicine, and urban myths concerning those, along with national policy on health care.

"Noise" can be much reduced by making and installing appropriate
shielding structures.

The key to happiness and nirvana would be a restricted-access
newsgroup, moderated so that all got along happily ever after.
That is the "shielding" which can be applied to keep out independent
thought, outside interference, and find sanctuary for all worshipping
the past of "the service" just like they had to do.

Of course someone who has bad screen days in here should
expend the effort to begin constructing such "shielding." Everyone
talks about it but no one is doing anything about it.

"Mankind invented language to satisfy his need to complain." - anon.

> And I am also awaiting your answer as to WHAT "specification" exists for
>"Morse Code".

97.3 (a) (27) - CCITT Recommendation F.1 (1984), Division B,
I. Morse code.

That is as stated in the 1 October 2003 printed form of Title 47 C.F.R.
available from the Government Printing Office. That same definition
existed in the October 2005 Code of Federal Regulations.

There are several adult education courses available in your area to
improve your personal reading comprehension skills.

> More assertions without validation? Or is it OPINION, expressed just
>because you like to see your name in print...?!?!

You have been repeatedly informed of the existing regulatory
specifications of and about International Morse Code. For years.

There is no point in you trying to argue the same subject with
constant obvious contentious behavior and trying to promote
verbal battles that irritate others.

It is much better to concentrate personal efforts on very real,
serious problems facing your remaining "service" days, such as
Access BPL and a possible future regulatory restructuring of
amateur radio.

>issues ...

Carl, I've made a suggestion repeatedly for at least six years in
here that it should be shut off from public access with only
"authorized access" and a moderator to attempt keeping the
peace. That way everyone can be "among their own kind," happy
and content, no evil independent thoughts intruding nirvana.

>I'm getting REALLY tired of all of this endless, childish bickering that is
>OT and doesn't belong here ...
>most days, it's hard to find the stuff that this newsgroup is supposed to
>be for because of the volume
>of petty, personal bickering that you guys load the newsgroup up with ...

I agree. But, having practiced computer-modem communications for
17+ years, slightly longer than that via time-share systems on the
old Arpanet, then Usenet, then BBSs, and finally the Internet after
1991, I'd say that human nature hasn't changed much. :-)

"Mankind invented language to satisfy his need to complain..." - anon.

For truly serious action on this, you should consult with Paul Schleck
on a "restructuring" of this newsgroup to make it closed-access.
Shut everyone out but your own kind. "Killfile" everyone that gives
you a bad screen day. Peace. Tranquility. Happy QSOs.

>Or, alternatively, you guys can go rag on each other in
>rec.radio.amateur.misc like it used to be (and why

>provide a place for the serious
>regulatory/policy discussion after rec.radio.amateur.misc turned into the
>sort of argue_about_off_topic_things
>fest that you guys have going on here ...

Tsk, tsk, tsk. Have you forgotten the immortal words of Jim Kehler
and his beloved "No SSB International" movement? Forgotten that
he loved to say (about Techs) "Gigahertz for gigasquirts?" :-)
KH2D = Jim Kehler, formerly high chieftan of hamminess on Guam.

Tell you what, Carl, let's see you hang in there with mild, civil manners as a model of compartment after another has threatened to abrogate your First Amendment rights in public, repeatedly called you "putz" (Yiddish for asshole), "scum" in various forms, "ignorant of everything in amateur radio," a "pathological liar," "dishonorable" towards the USA military after conjuring up obvious untruthful conditions...plus...various forms of personal insults including alleged homosexual acts, insulting my wife, my parents, my work experience, my education, educational institutions who provide college-credit courses away from normal hours.

Of course you've weathered those contentious conditions of an equal nature with the highest possible conduct befitting an executive directorship. All the PCTA have done equally calm, reasoned, civil replies in here, haven't they? :-)

>OK, there ... I've said my peace and now you can tell me to [expletive
>deleted for Jim's benefit] off ...

Wouldn't think of it. Heavens, no civilized person uses [expletive deleted] [expletive deleted] words in newsgroups...that's for the lower-class, inferior, non-amateur bourgoise, the riff-raff, the underbelly of society peasantry. Self-righteousness and sanctimonious behavior are the true rulers on an enlighted superior society.

Now back to the present-day amateur policy newsgroup where the main topics are immunization, diseases, past military experience, national policy, and - especially - much angst over long-past message exchanges which must be argued over and over and over and over and over again until the original non-winner considers they have "won."

Please excuse my absence. I am preparing some Replies to Comments to my government on federal regulations. No doubt I will once again by rewarded by an Amateur Extra licensee demanding I be censored and censured for exercising my First Amendment Rights to my government.

Censorship is wonderful, don't you wish everyone had it?

Not uncommon at all, Jim. In my area, we have farmers that hve sold off land for development, after which the people that moved into the development sued to shut the farmer down because of the noxious smells emanating from the farm.

I don't blame it entirely on the people suing, the farmer had to be pretty stupid to not know that "development people don't like nature very much.....

Which is a very commendable and proactive thing to do - and is, as you know, the only effective method of advising the regulatory folks of valid objections to their proposed new rules and policies. The more cogent objections that they receive, the better.

Thank you, Len, for taking the time to do so. Your effort is appreciated.

I'm sure that you agree that those who do not see themselves as being part of the solution are usually part of the problem.....

> No doubt I
> will once again by rewarded by an Amateur Extra licensee
> demanding I be censored and censured for exercising my First
> Amendment Rights to my government.

Of course - more than one, most likely. And that syndrome is. I think, what annoyed Carl enough to prompt this posting (and he certainly ain't alone there...). For example, you post something, then several others jump on you to 'prove you wrong', then others jump on them to 'prove them wrong', etc. Newsgroup warriors (MinutiaeMen?) all, fighting a never-ending battle for something or other.....but the real issues, those which threaten the amateur radio hobby, will not be decided in this forum. Or in that manner.

It would be good to see some of that energy channeled into positive and proactive channels - such as replying to the FCC on issues which threaten the hobby. Which you, and a few others, have done and continue to do.

Others, unfortunately, don't see it that way.

In my opinion, it's similar to the election process - if some guy didn't take the time to go out and vote, who cares when he complains that the wrong guy won....TS, I say.

I define it to be someone who operates poorly or
illegally on a deliberate basis (emphasis on deliberate).

> If it means that some sort of test is supposed to guarantee that everyone
who
> passes it will somehow be a fully qualified, skilled, courteous,
law-abiding

Agreed.

> But if it means that the test will help to insure that those who pass it
have
> at least some minimum level of qualifications (knowledge and skill) to be
> hams....

Which is the only purpose for the testing today and in
the past.

> It all boils down to what constitutes
> "basic knowledge to allow people into
> [amateur] radio". For some that includes
> a basic test of Morse code skill, for
> some others it does not.

Correct, and the FCC has been pretty clear on the
point that morse as a skill is NOT needed, except to
be compliant with the now vacated treaty code
requireent for HF.

> For some it includes technical and regulatory
> knowledge and for others it does not.

I am one that agrees there should be both technical
and regulatory knowledge.

> >Further
> >testing was intended to motivate people to expand their knowledge by

> >development.
>
> Agreed - all the way back into the 1930s, when the Class A license was
> invented. Or even earlier, if we count the old Amateur Extra First Class
> license.

No argument on that. It is clearly
the intent of incentive licensing.

> >This is why it is not necessary to have a direct tie between material
tested
> >and privileges awarded. Instead you tie the most desireable priviliges
not

have
> >but don't want to learn.
>
> That's an excellent point, Dee. But it's exactly what some people call
"jumping
> through hoops", "hazing rituals", "giving out gold stars" and such.

BUT code testing is a motor skills test, not a technical
nor regulatory one. No other mode is tested at the
use level as is morse code.

> Now we see the same arguments that were used against the code test being
used
> against the written test in the NCVEC proposal. How do we argue against
it?

You just do on the belief the FCC won't buy the NCVEC
proposal on that point.

> Unless I am mistaken, at least one of the folks behind the NCVEC petition
> was/is on the NoCode International board. And the whole thing was clearly
laid
> out in the "21st Century" paper.

Fred W5YI is both NCVEC and an NCI Board Member.

For the record, I am also an NCI Bd member and I individually
oppose the NCVEC RM except as to it calling for a total
end to all code testing. On the NCVEC petition itself,
NCI, as an organization, has not taken any official
stand for or against.

Cheers,

TAFKA, Mike, my youngest son is autistic. He was immunizised. Can
you tell me what caused it?

Was it all the crap they pumped into me before I went to Somalia? Was
it his own immunizations?

Do you know?

> Agreed.

Agreed to what??? Should I teach him Morris Code so he can
communicate with me?

And of course the reason such diseases are almost gone is - universal
> immunization.

My son is in a classroom of -all- autistic children in a small
community of less than 20,000.

> >Stupid logic, but there are some pretty stupid people out there.

Lots and lots of stupid people. Like those demanding continued Morse
Code exams.

Since you're a smart person, you have the answer.

What caused my son's autism?

> >If they think immunizations are bad, they should see how bad not
> >immunization is.

>
> Yep. This is one reason why the study of history - real history - is so
> important.

Someday someone will write the history of autism.

The real history. What causes it.

TAFKARJ and Mike won't be mentioned.

Who determines "skills they should have"? And why? And who says that
the FCC is to be
the enforcer? Things like "instrument ratings" for plane pilots from
the FAA make sense; that
you should prove that you know (via a test) that you know how to fly a
plane and land it
safely when it's foggy. Else you'll likely crash it and kill yourself
and all aboard. But requiring
extra knowledge of radio to be allowed to operate SSB on 14.160 vs
14.322 is kinda silly.
It's almost like forcing kids in high school to learn Spanish or French.
I had to take
Spanish in high school, and as I don't own a landscaping business or
such, it was a total
waste of time. Japanese or Chinese would have been a more useful
choice, but the
high school didn't offer those. Or better yet some form of technical
writing English class.
But writing was a real PITA back when I was in high school, no word
procesors or
computers then. or printers. How did people manage to bang out
typewritten papers
without errors?

>
>

So what should a candidate know to get a beginner, and upper level license?

As we are allowed to modify and homebrew equipment, we should have on
the tests questions on how such equipment works, and how to identify problem
areas like RFI, TVI, harmonic emissions and such.

Also RF safety issues, as we are allowed kilowatt levels of power.

electrical safety techniques, as much equipment use hazardous voltages
(also we should know not to wear wedding rings and such near car
batteries, a short thru a ring can burn a finger off).

Rules and regs. Like no business traffic. What constitutes malicious
interference and what is just normal life on the HF bands when conditions
are crowded.

Some knowledge of modes and bandwidth, especially why you don't
want to set your rig on 14.349 in USB mode.

Basically, we should know how not to trash the RF spectrum and
screw up other users.

What else should be here?

October 2005?

What happened to 1984 when VE testing began?

> There are several adult education courses available in your area to
> improve your personal reading comprehension skills.

But why?

I read quite well, Lennie.

Well enough, in fact, ot ahve caught you and your surrogate in a number of
"newsgroup faux pas"

>> More assertions without validation? Or is it OPINION, expressed just
>>because you like to see your name in print...?!?!
>
> You have been repeatedly informed of the existing regulatory
> specifications of and about International Morse Code. For years.

But still you refuse to specifically cite it.

I have yet to see a single "specification" that dictates character
duration or spacing.

> There is no point in you trying to argue the same subject with
> constant obvious contentious behavior and trying to promote
> verbal battles that irritate others.

If one does not want to be irritated, Lennie, then perhaps thye shouldn't
be making dumb assertions they can't validate.

> It is much better to concentrate personal efforts on very real,
> serious problems facing your remaining "service" days, such as
> Access BPL and a possible future regulatory restructuring of
> amateur radio.

I dare say my "personal efforts" in Amateur Radio far outstrip the
comments you've ever posted to EFCS, Lennie.

Steve, K4YZ

That >>IS<< what all your pontificating, strutting and crowing is ALL
about, Lennie...

Titles...

You belittle every licensed Radio Amateur for alledgedly being predisposed
with "rank, title and priviledge", yet it's your own "rank, title and
priviledge" that you want to talk about here.

Hot flash, Lennie...

All that spouting about Rocketdyne, your FCC first phone ticket, etc etc etc got you absolutely not ONE step closer to being a licensed Amateur.

Not one.

> The Deformable Mirror program...(SNIP)

...has absolutely nothing to do with Amateur Radio, BPL, Morse Code testing, my service in the Marines or your lack of any practical experience in the Amateur Radio Service, although I am sure it helped you vent a lot of frustration and made you feel like a big man for reciting it yet again...

And through ALL OF THAT, you're STILL a putz.

Sheeeeesh.

Steve ... why the [expletive deleted for Jim's benefit] do you have to play
the "veterans" card?
I have an honorable discharge, too ... Vietnam era, though I never left the
states ... but I don't see a need to flaunt it ... why do you seem to play
on your military service when you don't have a good excuse for bad behavior?

Steve,

The endless bickering and personal attacks that fundamentally have nothing to do with amateur radio policy and everything to do with personal grudges and vendettas have reached a level where they are almost totally dominating the newsgroup on many, if not most, days.

I believe that a lot of good folks, like Ed Hare, for one ... aren't around any more because they got sick of wading through all of the extraneous crap ...
our "community" here is worse off for the loss of such folks' contributions to the *real* discussions, and it's a shame ...

True enough. Maybe this will happen with satellite eventually. We may just
have to wait.

>>
>>In my case I think both DSL and cable are available on the other side
>>of the street!
>
> ?? How wide is your street?

It's a main road, but not a divided highway. It's not particularly wide.
The houses on the other side have their back yards facing the main road and
they are in subdivisions. We are not in a subdivision and have no
neighbours. If we were, then we would have an antenna covenant! That is the
supreme irony, if we were across the road and could get broadband I
couldn't put up antennas. I think dial-up and antennas is the better
choice.

>
> Or do your utilities run behind the houses, as they do here?

The power lines run across my front yard, as does the cable from the cable
company. However, they wouldn't let the previous owner of this house have
cable TV service, saying that it is a main transmission cable not a
distribution cable! OTOH, the power lines are close enough that BPL is a
real worry. Still, they will be Part 15, so as a licenced user I will be
able to get them to shut their whole system down, right?

RESCUE RADIO: VK HAM BRINGS BOAT TO PORT SAFELY - BY RADIO

A pair of Australian and American hams are credited with being a lifeline to a storm damaged boat with six people on board. The Australian was at his home QTHand the American was at sea on the stricken ship. Q-News Robert Broomhead, VK3KRB, in Waverly, Australia picks up the story from here:

--

Bernie VK2ABN on March 4 was in QSO with VK2ABT/VK3ACA and heard a weak and distorted signal, KA7MWL Shawn, who was aboard a Ukrainian registered schooner sailing from Wellington NZ to Sydney Aust., sails had blown out and they were making slow progress just on 4 knots.

At that speed they had calculated that they would run out of fuel before reaching port. Bernie VK2ABN ascertained 6 people were on board, BUT NO EPIRB! All this information was relayed to Sea Safety Canberra.

With the schooners satellite communication system also out of action, the Ham aboard, Shawn KA7MWL operating around 5 watts on 7070 Khz was the only contact.

Sea Safety Canberra QSY'd from 8176 kHz to the 40 meter band but as their transmitter was in Charleville, SW Queensland, no contact could be established.

Bernie arranged a for sked in 24 hours time, this time things a lot better, radio and safety wise, the schooner expected in Sydney ahead of previously estimated time.

As Bernie said: "I hadn't realised you can now call MAYDAY on the various DISTRESS frequencies but nobody is listening any more. Since the advent of GMDSS a computer scans the frequencies looking for encoded tones. If it finds one it attracts human intervention."

VK2ABN Bernie says " It was a bit like the Tony Hancock Radio Ham Sketch in retrospect, anyway that's what his wife thought and our telephone sure ran hot for a couple days!"

--

According to Q-News, the Sydney Australia Water Police stayed in contact with VK2ABN to keep abreast of the situation. With no High Frequency facilities that could hear the stricken craft, they were totally reliant on ham radio. (Q-News)

**

THE BPL FIGHT: CLARIFYING FEMA'S CLARIFICATION ON BPL

The debate surrounding Broadband Over Powerline Internet access has taken a new twist. Opponents are now raising fears about the contents of a letter recently released in the FCC's BPL public comment files. It was sent by the Federal Emergency Management Agency's top administrator to FCC Chairman, Michael Powell. Opponents say the letter clearly shows FEMA is now reversing course on its vehement opposition to nationwide BPL deployment. Amateur Radio Newsline's Mark Abramowicz NT3V has the very latest

--

The letter was written by Michael Brown, Undersecretary of Emergency Preparedness and Response in the Department of Homeland Security. That's where the Federal Emergency Management Agency was placed in President Bush's restructuring of agencies related to the security of the United States.

Brown's letter to Powell actually was briefly mentioned in February articles on the FCC's BPL action that were written for two nationally-circulated computer magazines. But it apparently got little notice and its contents were not fully detailed.

Now that the letter is part of the FCC BPL file, its contents are in the public arena.

Brown tells Powell in the letter dated January 8 that FEMA wants to clarify its December filing so it is "not misunderstood or misconstrued."

Brown goes on to say FEMA is aware that some of what he labels "distinct approaches" to BPL may cause interference to FEMA's H-F emergency communications network.

But then, and this is the section that has BPL opponents worried, Brown writes: "However, we continue to study the BPL proceeding and

have not concluded there is a material interference problem or that all of the distinct technological approaches to BPL pose risk of interference."

Compare that to the language in FEMA's December 2003 filing on BPL with the commission prepared by Barry West, FEMA's chief information officer.

West writes: "FEMA has grave concerns regarding the interference that likely would be caused to government communications by unlicensed BPL systems."

Or this comment: "This interference will severely impair FEMA's mission-essential HF radio operations in areas serviced by BPL technology."

In an interview with a Philadelphia radio station, a FEMA spokesman insisted there is no material change in the agency's position.

The spokesman says Brown's letter was sent to Chairman Powell to clarify that FEMA is still studying the issue and recognizes and supports the FCC's desire for a greater broadband capability for the nation.

The spokesman says Brown wants to see more studies on the interference issue and is working with other federal agencies.

However, the FEMA spokesman emphasized that any deployment of BPL should not pose an interference threat to the agency's H-F emergency communications network.

Those close to the BPL debate say Brown's letter, has only muddied the agency's position and sections could be embraced by both sides.

We'll let you decide.

Come to our website: www.arnewsline.org and click on this week's script and select the Text script and scroll to this report to find the internet U-R-Ls leading directly to Brown's letter and FEMA's original December filing.

(Letter from Michael Brown, Undersecretary of Emergency Preparedness and Response, FEMA. January 8, 2004)

<http://gullfoss2.fcc.gov/prod/ecfs/retrieve.cgi?native_or_pdf=pdf&id_document=6516083909>

(FEMA's December 2003 filing)

<http://gullfoss2.fcc.gov/prod/ecfs/retrieve.cgi?native_or_pdf=pdf&id_document=6515292045>

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--
In a communication posted to members of its Public Relations Reflector, the American Radio Relay League suggests avoiding references to the FEMA position for now in any BPL discussions or comments. (ARNewsline(tm))

**

THE BPL FIGHT: BIG NOISE IN MANASSAS

BPL has come to Manassas, Virginia and the hams there say that its not fun to listen to:

--

BPL audio

That's the racket being created by the latest of three Broadband Over Powerline or BPL installations opened in Manassas. This, as provided in a sound file on the www.W4OVH.org website, courtesy of George Tarnovsky, KE2AM. The interference level appears to be such that it would be all but impossible to hear a radio signal through it.

The kicker here is that this is reported to be an underground electrical feed that utilities claim are far less noisy than overhead wiring. However, having the wires underground does not seem to reduce the interference. At least not in this case.

And if you want to know more about the BPL hazard to America's communications, go get a copy of the of CQ. Joe Lynch, N6CL has an excellent analysis article in his "VHF Plus" column in the just out April issue of that magazine. (VHF Reflector, PR Reflector, W2VU)

**

THE BPL FIGHT: SOUTHERN OREGON GOES GLASS

Meantime, to the West in Oregon there's some good news on the BPL front. It comes from southern Oregon where the obnoxious radio pollution of BPL has lost out to quiet fiber optic delivery.

According to Doug Beck, K6ZX, in the town of Merlin, a private company, forming public and private partnerships with local government has wired the city of Ashland with what's called the Ashland Fiber Network. It has also extended fiber to the city of Medford with some 74 miles of glass cable connecting all schools to provide VOIP audio and video conferencing.

But that's not all. The partnership is also in the process of connecting to Grants Pass and will wire all the local schools and government offices as well. The best part is that all excess bandwidth is being made available to local citizens and wireless last mile technology is being explored to connect rural users.

Beck says over the VHF Reflector that the area is aiming to have a broadband connection available to all rural users without any Broadband over Powerlines in the area. (VHF Reflector)

**

Break 1

From beneath the Southern Cross in Auckland, New Zealand and from our studios in Los Angeles, California, this is the Amateur Radio Newsline, heard on bulletin stations around the world including the Metro Atlanta Telephone Pioneer Amateur Radio Club net in Atlanta Georgia.

(5 sec pause here)

**

RESTRUCTURING: SWEDEN GOES CODE FREE

It now looks likely that Swedish radio amateurs with a Class 2 license which is the equivalent of our code free Technician class, will be allowed to operate on the High Frequency bands as of early April. The decision to drop the Morse code requirement for an HF bands license in Sweden had been postponed from the 1st of January. A note in the March issue of QTC, the Swedish national society's magazine, suggested that on or about April 1st is when the change will be made. (GB2RS)

**

ENFORCEMENT: NO "DELIVER IT" ON 2 METERS

Using an illegal long range cordless telephone to deliver culinary delights is going to cost a New Jersey Chinese restaurant a good part of its profits. This, after the FCC levies a $10,000 against the eatery for operating transmitting equipment on 2 meters without a license. The FCC's Daryl Duckworth, NN0W, has more:

--

Duckworth: "A Notice of Apparent Liability to Monetary Forfeiture in the amount of $10000 went to Best Wok of Westville, New Jersey. An agent of the Philadelphia office had DF'd the signal on 145.8376 MHz and inspected the base and mobile units. The restaurant manager stated that he had purchased the long range cordless telephone system in another country and brought it to the United States to operate at the restaurant."

--

The FCC citation issued to Best Wok indicated that the telephone in question is not FCC Part 15 certified and is illegal to use in the United States. (FCC, RAIN)

**

ENFORCEMENT: IT AIN'T USER RIGHTS

A California ham is the latest to be told by the FCC that if he wants to challenge a repeater operators authority to kick him off a system, he will have to do it elsewhere. That the FCC will nor reconsider the matter.

The situation involves Mark A. Glover, KE6TTL of Garden Grove. Apparently, Glover has complained to the FCC about his being banned from using a repeater owned by the Catalina Repeater Association with the apparent blessing of the FCC. This in a letter from the regulatory agency to Glover back on February 2nd.

In responding to Glover's February 26th complaint, the FCC says that its letter of February 2nd explained the right of the repeater association to make such a request. Also, if Glover has an objection to the decision of the repeater owner, that he is free to pursue legal action locally. But says the FCC it won't be involved. There are no Commission hearing procedures are provided in such matters. (FCC)

**

ENFORCEMENT: TWO PEOPLE - ONE CALL

The actions of a New York ham in obtaining a call sign have come under FCC scrutiny. Again, the FCC's Daryl Duckworth, N-N-Zero-W:

--

Duckworth: "A letter went to Frank C. Richards, KG2IJ, of Moers New York concerning an application filed in 1995 where he requested the call KB4VU be changed to the next systematically assigned, to change his address to New York, and to renew the license. Frank C. Richards of Ft. Meyers, Florida, claims that he is the real licensee of KB4VU, and filed no application for a call sign or address changes and has never lived in New York."

--

The FCC says that this raises questions about abuse of the licensing system and the agency is investigating. It has asked the New York Richards to provide documented information on where he previously lived in Florida, when he moved to New York and all FCC Amateur Service licenses that he previously held. (FCC, RAIN)

**

WITH NEWSLINE: MENTORING PROGRAM UNDERWAY

Joe Eisenberg, K0NEB, who is running the database for the Roy Neal, K6DUE, Amateur Radio Mentoring Project says that the first matches have been made. These are in California with one being an e-mail only contact due to distance.

Joe says more match-ups are on the way. Hopefully as the database builds we will be able to make all matches face to face.

If you want to volunteer for the program or are in need of an Elmer to help you learn more, just e-mail us. The address is mentor@arnewsline.org. (ARNewsline(tm))

**

HAMFESTS: GAITHERSBERG - RIP

Some news from the hamfest circuit. After struggling to rebuild attendance from two moves the past four years, organizers in Maryland have canceled the 2004 descendant of what was once the popular "Gaithersburg Hamfest." This was a show that dated back to the 1950s. Amateur Radio Newsline's Newsline's Paul Courson, WA3VJB reports from Annapolis:

--

"There appears to be no support for this event from the member clubs of the Foundation or their respective members," according to Dan Blasberg, KA8YPY, president of the Foundation for Amateur Radio (FAR).

The group consists of a coalition of ham radio clubs in the Maryland, Washington, and northern Virginia region, and has used hamfest revenue to fund scholarships. In recent years it co-sponsored the event with one of its member clubs, the Columbia Amateur Radio Association (CARA).

Expressing his dismay that only two people had stepped forward from FAR to help stage the hamfest that had been scheduled for Sept. 11th and 12th Blasburg, said the lack of volunteer help is "not fair" to "carry the burden of a project of this magnitude and scope."

Blasburg concluded "it has been decided by the leadership of FAR and CARA to cancel Fall-Fest 2004 (due) to lack of volunteer participation." His note initially went out on an email reflector and since has circulated widely.

Blasburg this past week was hopeful his note would prompt people to step forward to help, but then, on March 27th, hamfest officials were openly talking about the cancellation and the withdrawal of the site reservation in West Friendship, Maryland.

What used to be the popular Gaithersburg Hamfest relocated to a parking lot outside a baseball field in Bowie Maryland in 1999, struggling as a local fleamarket no where near the size of the original site. A move to the Howard County Fairgrounds in 2002 did not help matters much, with attendance gaining marginally.

With the old Gaithersburg Hamfest now GONE, the successor as the largest in the mid-Atlantic region may now be the Timonium Hamfests at the Maryland State Fairgrounds north of Baltimore, where two clubs

sponsor a Spring and a Fall Timonium

Paul Courson, WA3VJB, Annapolis reporting for Newsline.

Thanks Paul. (ARNewsline(tm))

**

HAMVENTION 2004: THE FCC WILL BE THERE

Some much more positive news comes from Dayton, Ohio. This with word that two of ham radio's most popular speakers will be back at Hamvention 2004. Of coarse we are talking about the FCC's chief ham radio rules enforcer Riley Hollingsworth, K4ZDH, and FCC rules man Bill Cross, W3TN.

The two were missing from last years Hamvention due to a scheduling snafu. As planners put together this years outing, the duo was among the very first scheduled in. You will find them holding forth from on Saturday, May 15th from 10 a.m. to noon in Hara Arena Meeting Room 1. If you want to know exactly what's happening at the FCC and how it will affect ham radio, this is the event to be at. (ARNewsline (tm), Hamvention(r))

**

HAMFESTS: THE URUNGA RADIO CONVENTION

And speaking about hamfests, heres on that's a bit unusual. Its the annual Easter Convention scheduled for Saturday the 10th and Easter Sunday the 11th of April at the Senior Citizen's Hall in the city of Urunga, Uganda. Events include a 3.5 MHz mobile hunt, pedestrian on 2 meter T-Hunt, a 2 meter mobile multi transmitter hunt and lots more. Sunday will feature the famous Urunga scramble. A mini contest to see who can make the most contacts in 30 minutes. Its a great show, if you happen to be in Uganda an Easter weekend. (Q-News)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

HAM HELP: GET WELL WALLY

Unless you live in the American West where this newscast is produced, you are not aware of the contributions of Wally Foster, N6CDJ. Those who do know that Wally has been a huge contributor to ham radio in the state of California.

Over the years, N6CDJ has been responsible for thousands of hours dedicated to installing the region's packet radio system. He has also introduced many to packet and APRS and volunteers a lot of time to emergency services, fundraising, climbing towers and doing a first-rate job with repeater and station installations.

Wally's in a tough personal battle right now. Please drop him a QSL with a "get well Wally" message top help keep his spirits up during a trying time. You can send your wishes to N6CDJ at his callbook address. (AA6JR)

**

EMERGING TECHNOLOGY: MESH NETWORKS RADIO RELAY SYSTEM

On the emerging technology front, Mesh Networks, whose emergency-response devices communicate through each other rather than through a centralized command is expanding its technology. This, to work on other kinds of wireless equipment including radios used by emergency service communicators. Rick Johnson, KA9VZD, has more:

--

Originally developed by the U.S. military, Mesh system of networking lets individual radios serve as repeaters and relay points. This means that a firefighter too far inside a building to reach his command post can communicate with a nearby firefighter, whose radio will then repeat the conversation to the next closest radio. This is similar to hams using a programmable mobile radio to extend the hand of their 2 meter or 70 centimeter H-T..

And just like hams have been experimenting, Mesh networks can transmit video, data and position information in addition to audio. But heres the departure fronm what radio amateurs are doing. The Mesh technology also has the ability to create super-sized Wi-Fi hot spots. This in itself gives the system wide utility in public service applications.

For the Amateur Radio Newsline, I'm Rick Johnson, KA9VZD, reporting.

--

Mesh Networks says that it is recognized as the leading developer of high performance and scaleable mobile ad hoc networking technology. More about the company and its products is on-line at www.meshnetworks.com. (Press release)

**

HAM AWARDS: THE VP5 YOUNG CONTESTER

If you are age 18 or younger, a licensed radio amateur and have been dreaming about going on a D-X contest, listen up. This next story is for you.

For the second year in a row, a competition has been announced for keen young contest operators with just such a dream. The winner gets an all-expenses paid trip to the Turks and Caicos Islands to operate with the VP5X Contest Group in the CQ World Wide DX phone contest this October.

Applicants must send an essay of 500 words or more telling how they got started in ham radio. It also must describe the person who helped them get started in the hobby and why you should be selected for this contest DX'pedition to VP5.

The winner must have his or her parents' written permission to make the trip on their own. Parents may accompany the winner at their own expense. All entries should be sent by e-mail to contests@vp5x.com by the 31st of August. (GB2RS)

**

HAM AWARDS: 2004 YHOTY NOMINATIONS BEING SOUGHT

And while we are at it, its time to announce the opening of the nominating period for the 2004 Amateur Radio Newsline Young Ham of the Year Award. This program is open to any FCC licensed youngster age 18 or younger residing in the contiguous 48 states. One who has made a significant contribution to the community, the nation or ham radio though the United States Amateur Radio Service.

As we have said in years past, this award is not a contest for a prize. The person selected "Young Ham of the Year" is judged on his or her contributions to society through Amateur Radio. By way of example, a youngster whose only claim to fame is that of being licensed as an Extra at age four would not necessarily be judge as having made a significant contribution to the Amateur Radio service. On the other hand, a 14 or 15 year old Novice or Technician running a net during a major disaster or crisis would definitely be given consideration.

More information and a downloadable on-line nominating form is at our website. That's in cyberspace at www.arnewsline.org. The cutoff for nominations this year is midnight on Tuesday, June 31st. (ARNewsline (tm))

**

DX

In D-X, W3EF reports that the 3B9C dxpedition has already made over 110,000 contacts and with any luck will soon be the biggest dxpedition in history. He says that besides the sheer volume, this has also been a carefully planned and executed operation with strict attention to details such as propagation on all bands to all

regions. W3EF says it has been an absolute blast with a wonderful team from all over the world. At airtime the 3B9C operation continues. (W3EF)

In other D-X news, word that K5CM, N5KW and W5AO plan to operate portable VP5 from North Caicos island through the 7th of April. The island counts as NA-002 for the IOTA awards. (GB2RS)

Also, F8DVD, will be active slash JW from Svalbard on 80 to 10 meters to the 10th of April. He says that although it will be very hard to make contacts on 80 meters due to the very short night, he will make several attempts to do so. (GB2RS)

Lastly, PA9JJ will be active as C56JJ from Gambia until the 5th of April. Look for him especially on the WARC bands and on RTTY and PSK 31. For all these operations, QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: FCC MAY MANDATE IONESPHERIC DELAY

And finally, a little-known provision of a bill to crack down on indecency on the airwaves may directly affect Amateur Radio. It went into effect at 00:01 UTC on April 1st. Roving reporter Pierre Pullinmyleg, F0OL, reports:

--

I'ts a rather -- er -- interesting -- audio only -- April 1st report. To hear it download the newscast MP3 file at http://www.arnewsline.org/quincy If you miss Pierre this week you will have to wait another year before he returns.

--

Thank you, Pierre, and we hope you can get back to warmer weather without any -- er -- long delay. (F0OL)

Sorry, Steve, but I'm neither black, red, nor yellow (who'se
green???). I'm caucasian like almost all hams. Do you refuse to
treat caucasians?

How would the farmer know?

This past Wednesday, I was in Lancaster County, PA. Amish/Mennonite country, although development is pushing many of the Old Order out. We stopped at the Wawa at the intersection of 30 and 896. In three directions there were outlet malls and retail stores. In the fourth direction was a working farm, and a farmer with a team of 6 horses cultivating. The smell was definitely rural but not unpleasant.

> Do you know?

No I don't, and I'm sorry to hear that, Brian.

From what I have read, seen, and heard, I doubt it is chemicals put
into *you*. Most of that stuff is not good for you, though. And the rise
in autism doesn't correlate too well with immunizations IMO.

Here is my take on why a lot of children have developmental problems
that seem to be on the increase, per capita wise:

I think think there is a chemical problem in general. I think that
possibly a combination of food additives and chemicals that are making
people ill and interfering with proper development.

Here's an interesting link:

http://www.nontoxic.com/nontoxic/injured.html

lots of chemicals that we are using on a daily basis are not good for us at all.

and

http://www.edelsoncenter.com/aut_chem.htm

yet another link dealing with premature puberty:

http://news.bbc.co.uk/1/hi/sci/tech/479363.stm

http://www.emagazine.com/november-december_1997/1197gl_health.html

The last links are here because kids are being exposed to these chemicals that mimic hormones and mess with their proper development.

<snippage>

There are so many chemicals that we are putting in our bodies, from the preservatives in vaccinations, to the carcinogens that we clean our carpets with, and then put our babies down on those same carpets thinking that they now have a clean healthy place to play in. We seal our houses tightly to save money on fuel, and then breathe formaldehyde contaminated air from the carpets, insulation, and paneling. We eat meat that has been raised with hormones and antibiotics so that it grows quicker. When I was a coach, an amazing amount of the kids playing on my teams had to use inhalers for their asthma. These are supposedly healthy kids - they are not.

How on earth do we know which chemical or combination of chemicals is doing what?

What is going to happen to these children as they age? Are the asthma cases going to worsen? Probably will. These children going through premature puberty will probably age more rapidly - but who knows? But something is wrong, and I think it is a whole lot of different chemicals.

I think that there is a difference between children and adults.
Obviously sexual activity is one difference. For kids, it isn't good,
but for adults, if it goes away, we are just like the Shakers. Humanity
goes away after a generation.

Me too!

The main probelm with DSL is that the total cable length from your modem to the
telco's end is limited, and if you're too far away you cannot be served. Of
course they're building more infrastructure but that takes time and is focused
on the densest markets.

1 October 1995. Have to check out your responses, see if there's
any regress.

I have both year's printed copies. Paid for one, other was free.

> What happened to 1984 when VE testing began?

Did George Orwell write about it?

Or do you mean the CCITT document?

Check it out at the ITU website. You can order your own copy if
you wish. Lots of downloads there cost money and the revised
and re-nomenclatured document costs a moderate amount.

I have my copy. Paid for it.

Then you can find out exactly what the FCC definition reference
has in it.

If you do actually get one and read it, you will NOT find anything
describing "word rate." Indeed, you won't find a description of a
telegraphic "word."

>
> I have yet to see a single "specification" that dictates character
>duration or spacing.

Tsk, tsk, tsk. Not reading well at all.

The CCITT document referenced in 97.3 (a) (27) describes RELATIVE
dot-dash-spacing times.

Hello? Can you understand "relative?" Other than in a family way?

I've said two years ago that there's NO "word rate" or "word"
specification mentioned in Part 97, not even a reference to such
a document.

The latest print issue of Part 97 is 1 October 2003. You can get it
from the USGPO. Download on PDF is free, paper hardcopy costs
a bit. Ask around.

>> There is no point in you trying to argue the same subject with

"thye?"

>> It is much better to concentrate personal efforts on very real,
>> serious problems facing your remaining "service" days, such as
>> Access BPL and a possible future regulatory restructuring of
>> amateur radio.
>
> I dare say my "personal efforts" in Amateur Radio far outstrip the
>comments you've ever posted to EFCS, Lennie.

"EFCS?" Try Electronic Comment Filing System or ECFS.

Feel free to search the ECFS for how many comments I've actually
made and are on the public record. That is proof of filing, complete
to the entire contents.

Now go ahead and "prove" your "personal efforts" in amateur radio
so that there is no doubt of that effort. Sorry, you can't use the
general, no-detail, no-date "hostile actions" record...bragging is NO
proof.

And stay off the hundred-proof stuff. Don't drink and demod.

I've sent about 76 or so Comments to our FCC. Haven't made an
accurate tally lately but anyone can do it on the FCC ECFS
using just my legal signature name.

>Thank you, Len, for taking the time to do so. Your effort is
>appreciated.

Not everyone "appreciates" it. My first Comment was on FCC
98-143, the NPRM for Amateur Radio Restructuring. I was
quite busy with other things during 1998-1997 Holiday time
but got 14 text pages into the Commission a few days before
the official close of commentary (all paper, multiple copies, a
diskette, sent Express Mail registered).

12 days after my Comment appeared on the ECFS, the gunnery
nurse sent a "comment" which said absolutely nothing about
the contents of my text, just that "I had no business getting
involved in amateur radio matters because I had no license!"
[See proceedings 98-143 for 25 January 1999...still there]

Trying to cancel another citizen's basic First Amendment Right
is not to be taken lightly down in this country. There ARE self-
righteous SOBs here who think nothing of tramping all over
others' rights.

[SOB = Son Of Beeper in case Rev. Jim is listening in...]

Up to 3 years after that, a few in here wanted to ARGUE
that same Comment text content, extract several pounds of
flesh, etc., all at various times, just to make themselves feel
good, self-righteous, etc., etc. Necro-equine flaggelation.

But, that's all in the normal course of events. I've been doing
computer-modem communications for nearly 20 years and have
become rather thick skinned to all the yahoos who feel "safe"
cussing out other folks they don't like. :-)

["razzbonyas" = yahoos in some parts of Wisconsin, Minnesota]

>I'm sure that you agree that those who do not see themselves as being
>part of the solution are usually part of the problem.....

Actually, I don't. I see that some folks are just problems and the
subject matter is irrelevant as long as they have a Cuss Venue.

A few will actually take the time to discuss a subject civilly, but
that has always been rare.

>> No doubt I
>> will once again by rewarded by an Amateur Extra licensee
>> demanding I be censored and censured for exercising my First
>> Amendment Rights to my government.
>
>Of course - more than one, most likely. And that syndrome is. I
>think, what annoyed Carl enough to prompt this posting (and he
>certainly ain't alone there...). For example, you post something,
>then several others jump on you to 'prove you wrong', then others jump
>on them to 'prove them wrong', etc. Newsgroup warriors (MinutiaeMen?)
>all, fighting a never-ending battle for something or other.....but the
>real issues, those which threaten the amateur radio hobby, will not
>be decided in this forum. Or in that manner.

Heh heh heh..."MinutaeMen!" Apt. Bang-on as those in the UK say.

Decisions in here? Nil. But, checking the mail in here gives more
rounding to what two sides on an issue feel. Once in a rare while
there's a link to another site for information that may be useful.

"Link" other than the "go to ARRL website...worth a good read"
kind of imperative. :-)

Most of the heated battles that go on in any computer-modem
venue (regardless of subject) are almost entirely for attempts to
Get The Last Word Superiority Over Others...or to develop some
sort of Guru Image to Impress Others, get a "rep" or similar,
especially in a techie type of venue. Some of it is hilarious. :-)

It's been that way ever since Usenet got started decades ago,
got into BBS nets, and now infects all the newsgroups sooner
or later. There be a whole lot of murderous resentment by many
at being Talked Back To...their self-righteousness knows no
bounds!

My good buddy Patty once wrote a general remark when we co-moderated a BBS public board, "Sometimes the loudest sound you hear is your own mind screaming in the empty, silent room." That's poetic and to the point for much of it.

But, having said that, now watch someone try to butt in, making noises about intimations of misconduct with a "lady friend" even though we were good friends of opposite gender. Some live to throw dirt even if they are in a vast ocean. :-)

>It would be good to see some of that energy channeled into positive
>and proactive channels - such as replying to the FCC on issues which
>threaten the hobby. Which you, and a few others, have done and
>continue to do.

I totally agree. But, that takes actual WORK!

It's so much easier to sit back and toss [expletive deleteds] in a newsgroup, pull others' chains, and snicker in the safety of time and space isolation of network interchange delays. Some demand both invisibility in identity and respect for something they can't prove or reference. Marvelous. A fine catharsis for the timid.

>Others, unfortunately, don't see it that way.
>
>In my opinion, it's similar to the election process - if some guy
>didn't take the time to go out and vote, who cares when he complains
>that the wrong guy won....TS, I say.

Good point. But the complaining MUST go on...imperative...that's "only human." :-)

In two decades of modeming, I've worn out several TS Card punches, busy at clicking away at sooooo many cards! :-)

>> Censorship is wonderful, don't you wish everyone had it?
>
>Not censorship - perhaps initiative?

Good choice.

But, I was remarking in a much different semantic direction. :-)

One of the higher decimal number IEEE 802 Standards is for up
to 30 miles range. That might be a "Texas block" to some, but
most cities aren't 30 miles across. :-)

I have some of those 802 Standards but I'm not going to bother
with looking up any details for the regulars in here. Those (nearly
all PCTAs) will just tell me to go to the ARRL website for "a good
read." :-)

If you want the link to free IEEE 802 standards downloads, send
me e-mail.

>
> That >>IS<< what all your pontificating, strutting and crowing is ALL
>about, Lennie...

Now now...you were implying I was into homosexual activity
while working at Rocketdyne AND that I was a janitor.

I did neither and merely did a synopsis of slightly more than 3
years of real employment in an engineering group.

Note the years I included. A decade before the Internet went
public..a few years before the BBSs got into expansion.

> Titles...
>
> You belittle every licensed Radio Amateur for alledgedly being
predisposed
>with "rank, title and priviledge", yet it's your own "rank, title and
>priviledge" that you want to talk about here.

I'm not interested in talking about myself. I was answering your
ugly little charge of homosexual activity while doing janitor work
at Rocketdyne.

Feel free to contact Jim Hall, KD6JG. Jim was a Staff Engineer
at Rocketdyne and didn't retire from there until Boeing bought
the place from Rockwell International. Jim has been in amateur
radio as well as professional radio since before 1956. He will
tell you that I was an MTS at Rocketdyne...we worked in the same
department. Jim was also my immediate manager at RCA
Corporation for 5 years in the Postion Location Engineering group.

Feel free to contact Al Walston, W6MJN. Al and I shared an
office cubicle at RCA. Al was also Best Man at my wedding,
a wedding which was NOT "same sex."

> Hot flash, Lennie...
>
> All that spouting about Rocketdyne, your FCC first phone ticket, etc etc
>etc got you absolutely not ONE step closer to being a licensed Amateur.

I'm not interested in getting my very own amateur radio license.

I'm trying to talk about real POLICY issues, concentrating on the
elimination of the morse code test for any license examination.

All you want to do is make insults on others, charge them with
homosexual conduct, and say they've never done anything but
menial work. That's sickness on your part.

> Not one.
>
>> The Deformable Mirror program...(SNIP)
>
> ...has absolutely nothing to do with Amateur Radio, BPL, Morse Code
>testing, my service in the Marines or your lack of any practical experience in
>the Amateur Radio Service, although I am sure it helped you vent a lot of
>frustration and made you feel like a big man for reciting it yet again...

It doesn't "feel good" for me to sit here and refute a lot of LIES
you generate about my person.

Just the same, you feel you have a need to LIE about others, to
insult them every time you get the slightest negative response to
your postings.

Charging that I engaged in homosexual conduct while working as
a janitor at Rocketdyne is a double LIE.

Saying I engaged in homosexual activity at any time would be a LIE.

Saying I worked as a janitor at any place of employment is a LIE.

Saying my wife was a "correspondence school" graduate is a LIE.
My wife as Two Masters Degrees, both of which were granted
after taking formal classes at the University of Illinois. Prior to that
she got a BA from four years at a small college in Beloit,
Wisconsin, attending formal classes all four years.

Saying insults against my person as if they were factual is a LIE.

In general, you fabricate more LIES about others than you say
facts.

When you say you've done things, you don't give enough details
to prove anything to anyone...which is a form of LYING.

> And through ALL OF THAT, you're STILL a putz.
>
> Sheeeeesh.

You have enough demonstrated symptoms of mental illness from
all the public displays of inability to interface with other humans.
You should seek mental therapy to alleviate that. Do so.

Shalom, meshugge goyim.

Jim,

I hate to "kill-file" folks - they *might* just say something relevant at some point, but I'm considering it for a few individuals whose posts are mostly personal vendetta-like attacks and insults ...

> In particular, when someone posts information that is flat out wrong,
should we simply ignore it or challenge it?

If we see it and know it to be wrong, I think we should challenge it. However, it is not my job (nor, I suspect yours) to wade through all of their drivel in search of a relevant, incorrect assertion so that it might be challenged.

I tend to think that most people will give little credence to whatever some of these folks say, just on the basis of the tone and content of most of their messages. I am just finding it annoying to have the newsgroup polluted with so much OT stuff - newsgroup BPL, I think Mike called it.

> uncensored opinion?

Because your "nod to veterans" was just an obviously insincere, self-serving
"shot" at me, and not a genuine "hats off" to those who made sacrifices.

> Are you now insinuating that the sacrifices made by veterans in defense
of your freedom to do so was wrong?

You have a perverse way of trying to twist things to your own purpose Steve
...

> Congrats on the Veteran status. After you're done brow-beating
> me for having made an affirmative comment to Vets, reach around and
> give yourself a pat on the back from me...You deserve it.

Had your "affirmative comments to Vets" been sincere and legitimate, rather
than a self-serving attempt at a cheap shot, I wouldn't have said anything.
But, I resent *your* constantly trying to suck some personal debating
advantage (not that you get it) or "holier than thoubrownie points" out of

your service ... why do you think Len refers to you as "the gunnery nurse?" (Hint - it's to emphasize the way you make a fool out of yourself by trying to "play the vet card.")

OK ... now you can call *me* a putz ... and you're at the top of the potential kill-file list - but I wish you'd give EVERYONE a break for the benefit of the newsgroup.

Carl - wk3c

>Now that's dumb!

Even dumber...

It's now moot...but when I was at El Toro/Tustin in the 80's we'd routinely get phone calls at the abse complaining about the "[expletive] jet noise"...

I don't know how the one call got routed to the AeroClub this one Saturday morning, but the guy was P.O.ed that an A6 Intruder just flew by his new condo.

I asked him to give me his location so I could pass the info to Base Ops...Turns out he bout a condo for a quarter mill only 350 YARDS from the right-of-way corridor to the 34 duals at El Toro.

I asked him if he hadn't noticed all the jet traffic when he bought the place and he said no.

I told him that my pick-up truck, which cost less than a tenth of what he paid for his condo, had features on it I didn't care for, but I didn't fuss about them because I KNEW what I was buying before I signed on the dotted line!

I also pointed out that the base had been here since 1942 and flying jets since 1949. His condo was still dripping wet pain off the ceiling.

That's when I hung up on him.

>
>Was it all the crap they pumped into me before I went to Somalia? Was
>it his own immunizations?

Autism predates the widespread use of immunizations, Brian.

It, like many other birth defects, are still non-specific in etiology. No
one can take a test to determine if some combination of DNA or enviromental
exposures will induce it.

My daughter's birth defects were >>generally<< attributed to aerially
deployed agricultural defoliants, but at the end of the day, the answer was a
shrugh and a "Who knows...!??!"

>Agreed to what??? Should I teach him Morris Code so he can
>communicate with me?

Many Autistic children show a predispostion to defered methods of communication, but I doubt Morse Code would be one of them.

> And of course the reason such diseases are almost gone is - universal
>> immunization.
>
>My son is in a classroom of -all- autistic children in a small
>community of less than 20,000.

Some current thinking on this is that it's not a necessarily wise thing to do. Behavioral modification is best thought to work when they are placed in "normal" enviroments. Unfortunately the realities of economics and minimal resources dictate otherwise.

>Lots and lots of stupid people. Like those demanding continued Morse
>Code exams.

You equate inequities of your child's birth defects with Morse Code testing?

>Since you're a smart person, you have the answer.
>
>What caused my son's autism?

Mother Nature sucks. What caused my daughter to be born with only 25% of her brain? All we can do is love them, care for them, and try our best to prepare them for when we're not here.

>> >If they think immunizations are bad, they should see how bad not
>> >immunization is.
>>
>> Yep. This is one reason why the study of history - real history - is so
>> important.
>
>Someday someone will write the history of autism.
>
>The real history. What causes it.

Let's hope it's real soon.

All of our newsgroup bantering aside, Brian, I have a significant amount of experience in developmental disorders of children. I am at your service if I can help. Nothing gets in the way of a child.

Hint, Carl...

Lennie has ALWAYS played the "vet card", even to the point of signing
posts with his former service number, claiming that his rear-area support
duties were somehow akin to having made the ultimate sacrifice in combat, and
having tried to embellish his own service with that of men who died three years
before he was even inducted.

And if Lennie has fun calling me the "gunnery nurse", so what?

>OK ... now you can call *me* a putz ... and you're at the top of the
>potential kill-file list - but I wish you'd give EVERYONE a break for the

I didn't get a chance to go to Somalia, Brian...I was already out of the Corps then.

But I had plenty of other opportunities to visit that part of the world...some when you were still in gradeschool.

And I see you're still having to resort to profane adjectives in order to try and express yourself.

Too bad.

Do you reply to all the spam email that you get that promises you cheap prescription drugs, some poor schmedlock from Nigeria needs YOU to participate in some weird scam he's pulling off, or to increase the size of little willie to gargantuan proportions?

You probably don't, I know I don't. Point is that 90 percent of the email I get is worthless spam. I'm not going to control it, and my option is therefore to opt out of email if I really can't handle it. This newsgroup has a higher s/n ratio than my personal email.

If we approach the newsgroup noise as spam, it might make it a little easier to handle.

Do you think that any of us can modify Len's behavior? Or Steve or Brian's? Not hardly likely! I don't even want to. I like 'em all just the way they are. If a person has problems with what they post, they can avoid reading them. Not a hard thing to do, as aside from Brian changing his addy to avoid spam, they aren't disguising themselves.

Your first step is to PROVE your "information" is the "truth" that cannot ever be "flat out wrong."

You must separate your OPINION from so-called irrefutable "truth." Opinion is opinion, not some universal truth just because you think it is so.

After you've done all that, you have to consider that some folks will still be against you. That is the nature of the computer-modem beast. That will not change, not even if you think you speak the most truthful words possible by mortals. Get used to it.

Once adjusted to all those very real environmental conditions, but you still feel that your god-like words are irrefutable truisms, it is time to pack it in, quit the newsgroup, and perhaps establish yourself as a swami of a cult somewhere. That's much better than to hang in and constantly complaining that some just don't believe your truths to be self-evident and are so irreverent to your magnificent words. :-)

Join the groups against use of DIHYDROGEN MONOXIDE.

If you can't find those sites, I'll give you some.

Their websites yield much good safety information on the danger
to humans from dihydrogen monoxide. At least one city
administration has tried to put that in city ordinances.

Meanwhile, I still think of amateur radio as a HOBBY, a fun,
interesting recreational activity involving radio arts which requires
regulation and mitigation due to the physics of radio itself.

Some misuse the word "service" as in a service to the nation as
if it were akin to a military service or noble cause for humanity.
However, in all of Title 47 C.F.R., the word "service" is a regulatory
term denoting the type and kind of radio activity; e.g., Citizens
Band Radio SERVICE.

>
> Do you think that any of us can modify Len's behavior?

Why do you think anyone's "behavior" needs modification?

Consider that the few clues of just written words are not always
interpreted the same by different human beans.

Some folks cannot write well. Others can. A very few others
have considerable practice with writing in many different venues.

Individual perception needs honing in written-only environments.

>Or Steve or
>Brian's? Not hardly likely! I don't even want to. I like 'em all just
>the way they are.

I don't think you "like" them, but that's beside the point. :-)

Since Arpanet started, since Usenet spun off of Arpanet, since
BBSs emulated both and, finally, Internet took over for the majority
of computer-modem communication, and the behavior patterns
have all been the same. Some folks think their magnificent
words are golden words of wisdom from veritable gods and are,
as Hans Brakob once pointed out, filled with murderous rage at
any who DARE challenge that magnificence! A verbal firefight
then erupts from the furious volcano of the noble slighted.

>If a person has problems with what they post, they can
>avoid reading them.

Extremely easy for normal folks. Most browsers will just skip
to the next message with the Enter/Return key.

Obsessive-compulsives with a Fight! attitude cannot skip them.

>Not a hard thing to do, as aside from Brian changing
>his addy to avoid spam, they aren't disguising themselves.

Anyone with some normal practice in reading can see the word,
phrase, syntactic structure of individuals and thus identify them.
[that's much easier than the alleged "fist" of telegraphers...
there are far more clues to identities with written languages]

However, individual emotions can override such identitification
clues, particularly true of obsessive-compulsives with some sort
of grudge bias...or they need the cathartic effects of safely tossing
snit on others as a relief from daily frustrations away from the
newsgroups. [time and distance separation insures no risk from
physical retribution, hence so many, usually new modemists,
will toss away normal social manners and let their inner rages
predominate] Those who've been members of social types of
Bulletin Board Systems will know this by experience of
comparing on-screen appearance with in-person identity clues
and spoken communication, the in-person identification offering
many more clues to the inside workings of others.

Meanwhile, back at the raunch, there's still 4 petitions alive for
comments at the FCC. While the ECFS is in standby over the
weekend, it's hard to see who contributed on Saturday or Sunday,

but I don't see many rrap-ers' names in the ECFS listings. Not
enough "dedication and committment to the amateur community?"
:-)

Of course it can be done. But it costs $$ to do it, and the DSL and cablemodem folks don't see an adequate ROI. Yet.

This is the downside of "deregulation". Once upon a time, "the phone company" had to serve everyone pretty much equally, regardless of cost, in return for having a monopoly. Not true any more.

> cable system?

Depends on the particular situation. If there is currently no cable system, the cost of running new cable and all that goes with it is quite high, compared to putting in a few BPL taps and repeaters. OTOH, if the infrastructure is in place it's a different story.

>> Other things! Isn't modern life complex enough?

>True! like who's on "The Simple Life" tonight, or that insulting talent
>search show - lotsa important stuff like that.

Exactly.

>Modern life has always been complex enough, always has been and always
>will be!

The question is whether the complexity makes life better or worse. Here's an example:

Suppose a person goes for a job interview and things go well. Usually the next step for the interviewee is to send a thank you letter to the interviewer. Pretty simple task, right? And it hasn't changed much for decades.

Many years ago, a handwritten letter would be appropriate. You had to know how to write legibly. And you needed pen, ink, and paper.

Then came typewriters, and for such business correspondence a typewritten letter was standard practice. You had to know how to type, even hunt-and-peck style. But typewriting did not replace writing legibly. You needed a typewriter and paper, which was more of an investment than pen and ink, but a typewriter lasts a very long time.

Then came personal computing, word processing, and printers. And the standard for the thank you business letter went up another notch, as did the necessary equipment to do the job. And the learning curve to use it all. Plus the PC did not eliminate the need to write legibly or type.

And the equipment's life cycle is much shorter - remember daisy-wheel printers? dot-matrix printers? fanfold paper with holes in the side? How many different computers, peripherals and software packages have come and gone in the past, say, 20 years?

Yet the basic function remains the same: Send a thank you letter. But now we need all this equipment.

Of course a PC is far more than just a word processor, but you see the point.

Steve, I hate to be the one to have to point this out to you, but you are personally responsible for 100% of what you post. Every bit of it.

Don't go whining and crying and saying, "He made me do it! I'm not really this way. It's him, it's all him! Whah, whah, whah."

Take a little personal responsibility for yourself.

>general, the FCC
>replaced the N with A or B in your callsign. The FCC must have had an
>internal use only
>note as to which you'd get when they issued your novice call.

It was the sequence.

First FCC issued all the W#xxx calls. Novices got WN#xxx or WV#xxx and when
they upgraded the letter was just dropped.

When those were gone, the same sequence was done with K#xxx calls.

Then came WA, WB, etc. Since the license was only good for 1 or 2 years until
the mid 1970s, there was no chance that the entire sequence would be run
through.

>Today, you
>could get a vanity callsign with the

A lot of it has to do with the FCC computer systems and their ability to handle
changes. My info says the ARS callsign database was first computerized in 1964.

Yep. Not a bad smell, either, and it won't hurt you.

Some would criticize the farmer using horses. But a tractor won't make little
tractors to replace itself when it's worn out. Most farmers cannot yet grow
tractor fuel (although biodiesel may change that) and tractor exhaust isn't
good for the field.

FORMAL DISCIPLINARY HEARING-KATHLEEN R. LEE
Chairman Woods noted that Kathleen Lee was issued CPA certificate 36,525 on July 15, 1998. The hearing was to consider disciplinary action against Ms. Lees CPA certificate pursuant to Ohio Revised Code section 4701.16(A)(5), conviction of a felony under the laws of any state or of the United States. Ms. Lee was convicted in the United States District Court, Northern District of Ohio of five counts of Aiding Assisting in Filing False Tax Returns, a violation of 26 USC 7206(2) Ms. Lee did not appear at the hearing. The Board agreed to deliberate the disciplinary action in a later executive session and
Lees CPA certificate was subsequently revoked.

Coming from someone who is always demanding that others "seek mental
health counselling", this was precious.

"Why", indeed, Lennie..."why" indeed...

(1) Who's "Lend"...?!?!

(2) If "Lend", or whoever, wasn't making so many stupid, easily refuted misrepresentations about Amateur Radio in general or certain persons in particular, threads like those you mention wouldn't show up.

(3) As for "selectivity", I believe I've been VERY selective. Unless you can prove differently?

>"Ham " is uniquely American.

If NOTHING ELSE ever proved to me that you have almost ZERO, >>IF ANY<<
experience operating from any foreign part of the world, THAT was it.

Amateur Radio >>IS<< "ham" radio all over the world.

Amateur Radio >>IS<< "ham" radio in ALL of Japan, Malaysia, the
Phillipines, Europe and Africa. It is also in common literature of most South
American Amateur Radio publications and newsletters.

The term "ham" radio is part-and-parcel of the cover of the most popular
Amateur Radio journal in Japan. I believe that other persons in this forum can
verify for you that Japan's Amateur census is far in excess of the United
States'.

Brian, I have been trying to give you an "out" for the last 24 hours since
everyone is making a lot of noise about "playing nice", but you keep making
really stupid assertions that are so easily refuted that I have to wonder what
your REAL problem is.

If you have any doubts about any of what I have said about the use of the
term "ham" being a "generic" and therefore worldwide reference to Amateur
Radio, then just ask...

Now...WHO can hear that "pop", Brian...?!?!

>Take a little personal responsibility for yourself.

I do, Brian.

I accept responsibility for what I post. That's why when I post something that is later proven to be other than what I suggested it was I say "I stand corrected" or otherwise acknowledge my error.

You have yet to do that despite having been proven "wrong" over and over. You'd rather compound your humiliation with even more elaborate dodges.

Nice try.

Unfortunately, the study includes case histories and unexpected
accidents such as chemical interactions that we find out about only
after damage is done.

A gentleman I once worked with used to claim that no restrictions on
chemical exposure or pollution were necessary. When I asked him how he
could propose such a thing, his answer was "We will just adapt to the
poisons". No doubt, but the process of adaptation is a lot easier to say
than it is to go through!

Since you brought this back on-topic, I'll comment that I think perhaps confusion may result from the fact that hams may be "of service" under some circumstances. It is hard to think of 75 meter illness comparison nets as a service, or chasing QSL cards, but there are times when our assistance is not a bad thing.

You make an excellent point. I used to read that stuff, but soon got to the
point where I could tell from the subject line and sender that it was spam, and
I'd delete it unread.

>You probably don't, I know I don't. Point is that 90 percent of the
>email I get is worthless spam. I'm not going to control it, and my

>This newsgroup has a higher s/n ratio than my personal email.

In my case it's lower - there is more signal and less noise in my personal
email than here. Part of that is due to the high volume of good stuff from the
various reflectors, though.

>
>If we approach the newsgroup noise as spam, it might make it a little
>easier to handle.

Good point. I have been doing that for a while, without really thinking about
it.

>Do you think that any of us can modify Len's behavior?

Only Len can do that.

>Or Steve or Brian's?

It's up to them.

>Not hardly likely!

Agreed.

> I don't even want to. I like 'em all just the way they are.

You like the noise? I don't.

And I agree with Carl that their behavior has helped drive away good people
like W1RFI.

>If a person has problems with what they post, they can
>avoid reading them. Not a hard thing to do, as aside from Brian changing
>his addy to avoid spam, they aren't disguising themselves.

Aside from Len's use of no less than five different screen names here:

nocwtest@aol.com
averyfine@aol.com
averyfineman@aol.com
lenof21@aol.com
lenover21@aol.com

that's pretty true.

Newsgrouo BPL - very descriptive.

My big problem is that one of my addys is a .edu, and it has what many
places did at one time (perhaps some still do) my initials followed by a
number.

Many of the spammers simply use a random group of letters followed by a
semi-random group of numbers, and viola, "you have spam!"

It is chilling to think of how much bandwidth that wastes.

Oh no! But I separate the noise from the person

> And I agree with Carl that their behavior has helped drive away good people
> like W1RFI.

That is too bad, but I liken the situation to stopping driving because
there are wild drivers out on the road.

Once I left a group because of problems with certain posters. It was an
amateur telescope making SIG. I was getting personal email nastygrams
from one member on every post I made, and a couple others seemed to
agree with him. So I left the group. A week after that, I found out the
person doing this had passed away. Turns out he was a terminal cancer
case, and was on a LOT of pain killing drugs. I felt pretty awkward for
being so p****d off at him earlier.

Point is, maybe some people are less than pleasant, but we aren't
always sure why.

The LEAD in ordinary solder is now considered to be a no-no for
the environment and there is all sorts of whooping and hollering
for LEAD FREE solder. In large industrial quantities that can be
nasty on a small part of the environment, yes, but hardly a
DANGER in a home workshop or an electronics service shop.

I've never heard of anyone sucking on a soldering iron wiping
sponge...which might be worse for an individual.

The personal computer users who got all greenie in 1985
started whooping and hollering about color CRT RADIATION!
They didn't bother to look elsewhere such as in TV broadcasting
which had central control rooms full of RADIATING CRTs with
24 KV final accelerating anode potentials capable of generating
X-Rays! Like since 1955 with all kinds of folks sitting, walking
in front of them. So, now we've got little stickers on PC monitors
or somewhere warning us and some say "approved" to some
European country's standards. Color CRTs radiate light when
on...

The supposed DEADLY LONG-TERM RADIATION EXPOSURE
from cell phones is still alive and kicking as a "possible health
risk" even though the best smarts in medicine can't find a link
to verify that. Cell phones radiate little teeny amounts of RF...

There's the DANGER of RF RADIATION that is supposed to fry
neighbors or something and so there's lots of relatively new
rules in Part 97 about that. Is it needed? I doubt it. Hard to
separate the hysteria from the real thing.

Even the USAF School of Aero Medicine has a big bunch of
science types studying all kinds of RF radiation effects. It can't
find much evidence except for the already-legislated laws and
warnings about RADIATION!

In large quantities it can destroy crops, even vast tracts of
vegetation. The frozen form has been known to be a danger
to ships on the open ocean.

>nets as a service, or chasing QSL cards, but there are times when our
>assistance is not a bad thing.

Yes, that's true, but it is NOT the "basis and purpose" of why many
got into amateur radio. Nearly ALL hams got into amateur radio for
the hobby aspects, for personal recreation and enjoyment.

ANY citizen can, and many do perform real acts of service for their
communities. No ham license needed for that.

How many hams sit and monitor the ham bands strictly for emergency calls? Or even use a second receiver in a "guard" mode? Anyone monitor the old 500 KHz maritime distress frequency? The high-MF voice frequency? Anyone monitor the civil aviation distress frequency of 121.5 MHz?

Feel free to take your own poll on that. I doubt you will find ONE who will answer affirmative on any of them.

Those who want to be of REAL service can join the Peace Corps or something similar. No ham license needed there, either. Or volunteer working at a homeless shelter, or a shelter for battered women. LOTS of places can use volunteers doing a REAL service instead of prancing around saying "we're hams and we are basically an emergency service (and a noble credit to our community, etc.)."

Now, if you want to start a real ruckus, you can claim you got into ham radio just to "do a service for your country." If you do that, you will be telling an [expletive deleted] untruth. :-)

REALITY, folks, not false parading around on isolated stories of wonderfulness by others, waving your flags, etc.

Idiot. With responders like you, Pasternak will continue to spam this group with his drivel. Then again, this whole group is a collection of trolls.

[In case you weren't aware, the guidelines for the rec.radio hierarchy FORBID his weekly posting on "rec.radio.amateur.policy". The posts are permitted on "rec.radio.info" (because a specific request to do so was granted) and on "rec.radio.amateur.misc" (because it is not forbidden there), yet the jerk continues to post here, and it's assholes like you who respond to him (in any way) that will further encourage him to post here. Why does he need to post this here anyway - it's all up on his website?

In case you're unaware of Bill Pasternak's activities in producing "newsline," ask him why it costs $1,000.00/month (on average) to produce the news, while his competitors like "This Week in Amateur Radio"'s Community Video Associates or even the ARRL itself can do it for less than $100/month. Here's why: He's paying himself a salary - it's not a "not for profit" relationship. Then there's the matter of his clear BIAS in the news. For example, a few years ago, he did a series of stories about a Los Angeles area repeater (BP is in the Los Angeles area) and its problems with a system in Mexico, and Riley Hollingsworth's enforcement involvement with the interference complaints. Half of what he reported on about the situation was completely wrong, and the other half he made up. How do I know this? I know this because I personally know the trustees of that (now former) L.A. system, and I observed the disgruntled Mexicans lying to BP at a local amateur radio convention. BP made NO ATTEMPT to contact the L.A. trustees for their side of the story - he simply made up "facts" to fit. His "journalism" is right up there with the level expected of the "National Enquirer", the "Weekly World News", and other such tabloids - it is CRAP.]

Unless, of course, they choose to do that service as a control operator of
an Amatuer Radio Staton.

I use a Hamtronics receiver with ELT alarm function. I also monitor
military guard and maritime guard with EPIRB alarm. We have tone alerting for
ARES/SKYWARN locally.

> Those who want to be of REAL service can join the Peace Corps

Of course we have Lennie to depend upon to tell us what "real" service is.
Not that Lennie hiumslef has gotten himslef out of the house to do ANY kind of
service...Unless you consider LIP service...

> Now, if you want to start a real ruckus, you can claim you got

REALITY, Lennie, are the reams of accolades bestowed to Amateur Radio by the governors of almost every state for various "Amateur Radio Weeks", all of which acknowledge the disaster relief and other public service activities of Amateur Radio.

REALITY are the words of praise read into the Federal Register by elected representitives in Congress, from various disaster relief agencies, the Department of State, the Department of Defense, etc etc etc that atest to Amateur Radio's value as a "valuable national resource".

REALITY, Lennie, is found in the Memorandums of Understanding by numerous private, civil and military agencies with the ARRL/ARES for rendering support in those very same scenarios.

REALITY, Lennie, is that you are a loud mouthed idiot with absolutely NO basis for your anti-Amateur rantings save for your own wonded ego that won't let you take an Amateur exam lest you admit that you ARE a mere mortal and must do what other mere mortals must do to possess an Amateur Radio license.

Sucks to be you, Putzy One.

I agree except for one point: The decision was made by different people for a
number of factors, such as the *perceived* difficulty and the *perceived*
rewards.
>
>Having earned my initial license in 1992 (Tech with HF), I'm quite familiar

>
Here in EPA, after about 1980 the predominant entry license was the Tech. This
was true even before it lost its code test. The reason was 2 meter/440 access,
which Novices didn't have. A prospective ham would see almost every ham with a
2 meter HT or mobile, ask "what license do I need to talk to you guys" and wind
up with a Tech. Code or no code.

It's more like this: Stopping driving on certain roads because of the
wild drivers on those roads.

> Once I left a group because of problems with certain posters. It was an

His behavior wasn't your doing, Mike.
>

No, he doesn't. In fact the reverse is true - most of Len's posts here
do not contain his name or other clear identifier. Of course he posts
here so much that if only 1 in 100 posts is clearly identified, it is
soon clear who is who.

I don't know either, and I'm also sorry to read that. I have some
slight layman's experience with such disorders.
>

> people ill and interfering with proper development.

That's certainly a very logical theory. Here are some other factors:

1) Certain chemicals and other environmental factors, by themselves, may not cause measurable problems. But in combination the total effects may be quite pronounced. Most product testing is single-factor.

2) A product that is "safe" in its original state may break down in the environment into waste products that are not.

3) Individuals have varying levels of genetic predisposition. Almost everyone has, and remembers, an "Uncle Charlie" who worked with toxic materials all his life, smoked 3 packs of Dromedaries a day, drank a quart of John Daniels and died at the age of 95 in a freak hang-gliding accident while on vacation with his 30 year old wife. But there's also "Aunt Ethel" who died of a rare malady at the age of 32 even though she never drank, smoked, or was knowingly exposed to anything more toxic than Ivory soap.

4) Health care professionals are getting better at diagnosis. Years ago, many developmental disorders (such as autism) were not differentiated from mental retardation.

We don't. But if we protest, we are derided as "luddites" and
"anti-progress".

> What is going to happen to these children as they age? Are the asthma
> cases going to worsen? Probably will. These children going through
> premature puberty will probably age more rapidly - but who knows? But

I agree, Mike. At the very least, the testing done on chemical
products is woefully inadequate.

At the same time, it's important to focus on solid scientific
information. Repeated tests have shown no causal link between the
tested immunizations and autism. Then there's the "facilitated
communications" fiasco of some years back.

You should re-read those statements and act on them, Len.

So here's a challenge for you, Len:

Let's see you set the example of "civil debate". That means no name-calling, no little digs at other people's jobs, names, license classes, ethnicities or religions, no making fun of their favorite modes. It also means clear distinctions between facts and opinions.

And it means behaving that way even if someone disagrees with you, or disproves some claim you make here.

Go ahead, Len. Show us how it's done. I'll follow if you lead. If you choose to behave the way you typically have done here for the past 7 years or so, I'll just ignore you.

It's an encode of some language that is not normally supported by ASCII,
like Chinese
or Japanese. "ISO-8859" is likely the spec for what the code means.

I get a lot of spam that looks like this. I suppose the spambots can't
tell what
ethnic group I belong to from my email address. "wa2ise" isn't a normal
name,
and the spambots don't know about ham call signs.

Likely its a Ponzi scheme to sell Viagra perscriptions to spend $5 to
make $5M. ;-)

Forgive me, holiest of holy men of the Church of St. Hiram.

My name and current postal address has been given over two
dozen times in 5 electronics publications, a minimum printing of
over 50,000 per issue.

My name and current postal address appear the same on 90
documents on 22 different proceedings in the FCC Electronic
Comment Filing System.

Forgive me for the impertinence of appearing anonymous, your
emminence. I am but a humble servant of independent thought,
unable to bask in the etheral shining glow of your magnifence.

>2 meter HT or mobile, ask "what license do I need to talk to you guys" and
wind
>up with a Tech. Code or no code.

The Environmental Protection Agency (EPA), as a government entity, is
not under any regulations of the Federal Communications Commission
(FCC). EPA operating on amateur radio bands is a violation of the
Communications Act of 1934.

The regulations covering civil radio and communications in the
United States is contained in Code of Federal Regulations, Title
47. The full-volume set or separate Parts may be ordered from
the United States Government Printing Office (USGPO) in paper
form or downloadable free from www.gpo.gov in either text or
scanned from printed form.

There you have it: A simple correction of your erroneous use of a
federal agency acronym. No acrimony, no name calling, the
names that of identification of the correct names and acronyms.
Plus a helpful suggestion for your self-education.

"Please state the nature of your medical emergency." - Zimmerman

Absolutely! I have worked with some dangerous stuff over the years. But
what is needed is knowledge about what you are working with, and honesty
in it's effects.

> Repeated tests have shown no causal link between the
> tested immunizations and autism. Then there's the "facilitated
> communications" fiasco of some years back.

That was one of the sickest chapters in psycho-land. If you look at how
it was done, Facilitated communications is almost like the old Ouija
board. It mainly shows the mental state of the person that is "helping".
And lots of them were pretty sick...

>board.

Yep. What I find most amazing is how widespread it got before serious testing was done. As I recall, the testing that disproved it was done by people trying to prove that it worked. The tests were elegantly simple and completely damning.

>It mainly shows the mental state of the person that is "helping".
>And lots of them were pretty sick...

Yep. And some people lost custody of their children and were accused of abuse based on "testimony" obtained through FC.

Gotcha! Here "EPA" means "Eastern Pennsylvania". I'm in "NNJ",
northern New Jersey.
The country is divided up into around a hundred zones by the ARRL. For
radio contesting
and reception reports.

I can see where that could easily be a dominant factor if the prospective
ham had some exposure to that.

It works wonders, Carl. Since implementing a disciplined screening protocol the noise level has dropped about 30dB here. Most of the messages I see actually pertain to amateur radio policy.

At least here in EPA/SNJ/DEL/MDC, a lot of new hams started out with scanners.
They were a natural adjunct to a cb set in the late '70s and early '80s. And of
course they'd come upon ham repeaters and mobiles - all running 2 meters or
440. Indeed, many clubs in this area were organized around their repeater.

> Agreed. But how much is needed is the tough question. How much is enough?

I think that "enough" is testing that will allow the prospective ham to
get enough knowledge to know where to start to get a station on the air.

And here is the conundrum IMO. We are now considering allowing hf
access to a batch of new amateurs. At the same time, we are talking
about s significant (IMO) reduction in the qualifications for that
access. So unless the General test element meant and means absolutely
nothing, we are going to launch a lot of people onto HF with even less
qualifications than we have now.

Is this doing them a service? That's what I wonder about. I doubt many
people would argue for turning out more Electrical engineers by
drastically reducing the requirements to be one. Yes I know that an
engineer is a professional, but my point stands. How does lowering
requirements improve something?

>>Also RF safety issues, as we are allowed kilowatt levels of power.
>

There is no evidence of that.

You say "proof," yet you have none.

You don't know who "Lend" is, but you're certain he's "...making so
many stupid, easily refuted misrepresentations...blah blah
horesecrap."

That makes you a liar. Again.

Suck it up, Steve. No dodges. Admit you were wrong.

> (3) As for "selectivity", I believe I've been VERY selective. Unless you
> can prove differently?

Yeh. Now you're going after a guy named, "Lend."

I just scanned through the "FREQUENCY" database. I don't see the EPA
with a single amateur frequency listed. Hmmmm?

So, will the "Dynamited Duo," formerly known as TAFKARJ and Steve, not
to be confused with "Ren and Stimpy," please indicate what secret
Amateur Frequencies that the EPA has or uses.

Thanks.

>
> Jim, I think this pretty well answered any "questions" about Lennie's
> ability or willinginess to be "civil".

Steve,

The use of name-calling, insults, and other personal attacks is often an indication that the attacker does not have a counterargument. Rather than admit that he or she is mistaken, the attacker tries to divert attention from the facts. We see this in the very first line of Len's post:

"(Holy man, mad as heck and not taking it anymore)"

and continuing all through it.

Also, this sort of behavior tries to get the person attacked to reply in kind. If that happens, the attacker has "won" because he or she has dragged the attacked person down to the attacker's level, and has avoided the actual subject of discussion completely. The fact that the attacker was wrong is lost in the noise.

So your use of words like "Lennie", "putz", "loser", and "idiot" (to name just a few) actually gives Len exactly what he wants.

It's like the situation where a child argues with a parent over bedtime *at* bedtime. If the parent argues, the child "wins" because bedtime is, by definition, being extended by the time spent arguing. And the child will do more of the same, because it "works".

Replying to Len in kind teaches him that his methods "work". Indeed, replying to him at all teaches him that.

The solution is obvious.

PLONK

Some folks have a very unique way of calling you or accusing you of something, all-the-while being up to thier necks in it themsleves, albeit in a more, uh..."subtle" way.

And they can call me anything they want as long as they don't call me later to dinner!

This would be an extension of distingushing between malacious
interefernce and
the "facts of life" on HF ham bands (that nobody has exclusive rights to
a specific
frequency and that both parties involved in QRM move away (up or down) in
frequency to clear each other. And that some bands have unexpected patterns
of propagation (like 10m has the usual circle of nearby coverage, then a
ring of
no coverage, and another ring of "skip". And thus you can QRM the reception
of a ham in the skip zone trying to copy someone you can't hear. So you
would
then understand why someone seems to be talking to himself.).

Also some basic knowledge of the "syntax" of a QSO. XX#XXX, this is WA2ISE.

>
>- Morse code tests
>
Why this today? Back in the vacuum tube era, morse code (CW)
transmitters and
receivers were simple but required human encode and decode. Today we have
digital technology and such for automated encode and decode of modes
more robust
than old fashined CW. Morse can be a fun mode for those interested,
but should
it be required?

It's been done. Namely the old Novice on HF. Albeit at lower power, a
novice still had to
contend with TVI and RFI issues. Sometimes he had help from an Elmer.

Except for unusual propagation, 5 watts won't go far. You won't be
heard and you
won't be able to play with the bigger dogs. That could be a serious
turn off to a
beginner. "Nobody will talk to me". Running 100w can still require
patience in
a crowded contest environment.

So? The ARRL had training films that had smiley faces on electrons in
cartoons of radio circuits.

If this book can get newbies up to speed so that they don't make bonehead
errors on the air, then it's a good thing. The new ham can fill in
gaps of knowledge
as he goes along later.

Agreed, Robert. My actual position on the RF and high voltage is "test 'em for it, and let 'em play with it". If we don't test 'em for it, then we shouldn't let them play with *anything* they can hurt themselves with.

Some of the proposals want to limit the beginners power levels, ostensibly for safety reasons. They rationalize that if we reduce power

levels, or even have bizarre requirements such as a "voltage to the finals" limit for the newbies, this will even serve to reduce the questions needed on the test, making it easier to get a license.

I wonder how many prospective hams have ever stated "I was going to become a Ham, but a 50 question test? I absolutely refuse to take a test with more than 30 questions!"

oops, I digress.....

Hams should be taught from the get-go about RF and high voltage safety. We operate with high voltages, and if we homebrew (ohh noo, that is another thing some proposals want to eliminate for the young'uns) we will possibly have some serious voltage running around. And the transistor and IC generations should probably be reminded of that.

I think that elimination or even reduction of the number of test questions by eliminating the RF safety questions verges on criminal negligence by the parties involved. there has been a precedent set in what we have now. I wonder if the ARRL might feel itself at the pointy end of a lawsuit (remember, they are involved in the makeup of the tests) if it reduces that requirement. After all, someone at some point felt it was a good idea to put those questions in.

That is why I believe if we're putting them out to play without adequate learning, we must limit that power to something that is not likely at all to hurt them.

OK, fine. Pretty basic stuff like what a MHz is and such.

> qualifications than we have now.

That all depends on what is actually in the tests. The old Novice test
was around for almost a half century and turned many, many hams loose
on HF - me included. With a 20-30 question written test and 5 wpm
Morse, often using homebrew, kit or converted-surplus gear.

And for most of that time, the new ham had to tune the gear up in
order to transmit, and had to figure out things like how to build a
transmit-receive system to go between the separate tx and rx.

We did OK.

It only works if the privileges are reduced accordingly. Which is a
key part of the "NewNovice" concept.

Speaking of which, it now becomes apparent why your are waiting for
the right time to send your proposal to FCC. The others proposals are
functioning as "warm up acts" to your "main event".

Cool.

Give the man a see-gar.....

The EU and the US DOJ didn't seek the proper remedy against M$.
They should have insisted on a total recall of each and every copy
of Windoze/Internet Exploder/Micro$oft Orifice etc. sold, to be
replaced at M$'s expense with programs that are far more reliable
and far less buggy.

THAT would have been poetic justice.

So you want to jump up and down and cite Japanese Amateur Radio when
it suits your purpose, but when I told you 10 years ago that they have
a no-code HF license, you didn't want to talk about it. It wasn't
really an amateur license. It was like "CB Radio." Now we're all
brother "Hams." How nice.

I never said the Japanese low-power HF license was "like CB", Brian...Not
once, not at all.

Also, YOU said the term was "uniquely American". I proved you wrong so
you make accusations that are false. Nice try.

I'd ask you to provide a quote from a valid post, but since I know there's
none, why waste the bandwidth...?!?!

Actually I would have said you don't even need one. In an emergency, just about any part of the anatomy could be used. This is independent of what the normal operating practice might be.

Besides that one could easily build a key designed around the principle of being tapped if desired.

Each and every mode will have conditions under which it will out perform others. When there is a high static level and phase shifts induced by severe auroras, voice fails and so do all computer aided digital modes currently in existence. This was proven last fall with the large number of major solar flares we had last fall. Code with human encode/decode held up longer than any other mode under that set of conditions.

I agree 100%...don't let the title fool anyone...
The "XYZ for Dummies" books are great because they assume
the reader knows nothing and then provide guidance that
allows a reader to jump over material they do already know.
All too often attempts at beginner level books written by
experts in their field often assume far too much basic knowledge
or understanding on the part of the reader. I taught an Intro
to the Internet class a few times in our local adult ed program
and I always recommended the "dummies" books. No one ever
regretted buying one.

It's not the speed that's a problem. It's nerves. I worry I might make too
many mistakes and then I get to where I can't send even though I'm fine off
the air.

Contests are OK because the exchange is short. Even if I blow one, well
I've time to recover before I hunt for the next one. Got some rare DX that
way.

Some of us hams might be proud to wear a shirt like that. While I don't
disagree with Part 97 or the basic regulatory apparatus, I do disagree
with the blatant censorship being perpetrated by the FCC.

And I have both my Extra and my General Radiotelephone licenses.

There's a fine line between "censorship" and demanding that our airwaves
not sound like a brothel on payday night. One can effectively express thier
views without resorting to the usual profane adjectives.

Why does Howard Stern and others of his ilk have to use profanity and
disrepute women in general for his "shows"...?!?!

In my not so humble opinion, it just goes to show that without profanity
or ribald reference to women, he's got absolutely nothing to offer....He AND
the other "shock jocks".

But the "shocking" part is that many of the people who are now demanding
his censure are the same liberal twits who thought this was "freedom of speech"
and that he was funny only 10 or 15 years ago.

It's not so funny now that THIER KIDS are coming home with a mouth full of
filth!

Do the numbers "3995" or "14313" mean anything to you?

>One can effectively express thier
>views without resorting to the usual profane adjectives.

Way to go, Rev. Robeson...or is that "Rev. Janus" with the two faces?

> Why does Howard Stern and others of his ilk have to use profanity and
>disrepute women in general for his "shows"...?!?!

Stern is a radio amateur?

There's not supposed to be any broadcasting in amateur radio.

Ah, but you want to make this a CHAT ROOM, do you?

> In my not so humble opinion, it just goes to show that without profanity
>or ribald reference to women, he's got absolutely nothing to offer....He AND
>the other "shock jocks".

Well, then, rise up and smite the infidels, cleanse the ethnic white male dominance of amateur radio!

Make amateur radio SAFE for "your kind"...the ones that love to call others filthy and profane names...but allow no others to do anything horrible like that to YOU. :-)

> But the "shocking" part is that many of the people who are now demanding
>his censure are the same liberal twits who thought this was "freedom of

There ya go, Rev. Jim!

I know why you don't acknowledge Amazon having pre-publication advance sale advertisements for the last three weeks...Amazon "doesn't make any profit!" :-)

Isn't that strange...Amazon still in business after all these years of "not making any profit!"

I guess there will be a sequel soon..."Dummies For Ham Radio."

Steve, we'll always have folks arguing for/against censorship. Free the air waves! Yep. Did you see the article in the newspaper day before yesterday? If you didn't, send me a note off group and I'll send you a photo of it as it is still on my porch in the recycle bin. The article? Heheheheh ....

Essentially, it seems there are new interference problems. The police and fire departments in some areas have been experiencing interference from - get ready for this - CELL PHONES! Yep, the huge numbers of cell phones and cell phone towers are beginning to make it difficult for the fire and police to communicate. Many folks with HTs that have been in reasonably close proximity to large communications centers (such as the 911 center about two miles from my house) already know about intermod. Hey, weren't cell phones supposed to be the new 'emergency' communications?

The sad thing is that the FCC is largely a shill for large business now. It would't take a ton of effort for some kind of coordination to help avoid this problem - but, hey, no regulation is better than regulation, right?

I hope your area isn't one of those they were talking about. Power to the people! I can see it now. A release of gas, a minor quake - all the cell phones light up and the police comms go down. Hey, why not eliminate the FCC entirely? Just wait until BPL arrives ;)

Best regards from Rochester, NY

The way that they can do it is because they are STUPID, Steve! They
seem to think that this will protect their kids and that they will grow
up drug free because their parents will talk to them, and they will
refrain from all sexual activity, remaining a virgin until the age of
thirty-five, after which they will marry and live a morally correct
life.......... fuggitaboudit!

Kids will learn the language and the "bad stuff" anyhow, and the SFB's
that think the censorship will help don't realize that they just make it

"kewler"

But on the other hand, I want it cleaned up because its piggish and awful manners and catering to the lowest common denominator.

Before we go too much further, I need to say that I don't think all
that highly of the old Novice test.

When we are talking about people of yore and now, I think that most
people that decided to go for a license at that time had some inkling

that the tube equipment usually used some pretty high voltages. Now the highest voltage most people use is the 120 volts coming out of the wall socket. Inside most electronics, the voltages are pretty low.

But that is for *most* equipment. A fun part of the hobby is operating old tube equipment. Most amplifiers are still tube driven. Lots of *hurty* things.

And I think that times have changed enough that we should coach the newbies on that. I like to lump HV and RF in the same general area. Many of the concepts for staying safe around V can translate over to RF. Of course the newbie needs to know that RF has a nasty habit of getting into places that won't be so obvious.

> And for most of that time, the new ham had to tune the gear up in
> order to transmit, and had to figure out things like how to build a
> transmit-receive system to go between the separate tx and rx.
>
> We did OK.

Of course. And I think your pre-exposre to the concept of high voltages running around inside the equipment went a long way towards making it okay.

>>Is this doing them a service? That's what I wonder about. I doubt many

All this talk makes me want to homebrew something with tubes. (I've never done that outside of one project in school)

Hello, Dee

There have been more than a few times I'd send error ... then a pause ...
the a few wide spaced double dits ... and then send "I can't spell for
beans" ... some more dits ... and then continue LOL. That used to pose an
occasional problem when I got into a fairly high speed cw qso. Once at 40
or more, I didn't have time to try and fish an easier synonym out of my
brain box and really fowl up ;)

All part of the fun. They never built a spell checker into the paddles ;)

Saw it here in the local rag too. The diagrams were particularly
uninformative. Showed
radio towers with a wave comming out. And the wave was divided up into
various
sections showing allocations. At first I thought "time division domain"
but realized that
it had to be "frequency dividion domain" for the allocations to make
sense.

Ever Wondered What Happens When the Cameras
are not On During Survivor or Temptations Island ?

Curious About What Happens Behind Closeed Doors
On Big Brother or American Idol?

You Know Crazy, Wild and even Obscene things Happen!

The Networks Dont Want you to See This!!!!
BUT WE SHOW IT TO YOU!!!

http://tinyurl.com/2xcy2

BECAUSE THE CAMERA WERE ROLLING the Shots just got
BANNED or CENCORED but we Have the SECRETS from REALITY TV

This is for real You Know You Want to See It!

More Erotic Than Temptation Island
Beyong BigBrother
Sexior than Survivor
Better than the Bachelor
Raunchier than The Amazing Race

Nasty Obscene, erotic, dirty, insestuous, gross, indecent,
sleezy, impure, wild, erotic, pornographic, smutty,
risque, sensual, sexy.....
YOU NAME IT - THEY DID IT
ADD WE HAVE THE PROOF

The Contestants Did it all and the NetWorks Couldnt
Show it, it was Banned, Cencored there Secret
Now we show you what they were doing!!!!

Fetishes, Lingere, Lesbianism, Bi Sexual Experiments,
Foot Fetishes, FORCED SEX, Cross Dressing, Swinging,
jacuzzi group sex, threesomes, hi heels, rubber,
Whatever turns you on - they did it while they
thought no one was watching.

The Real Private Secrets from, Survivor, Bachelor,
Bachelorette, Temptation Island, Mole, Joe Millionare

Contestants caught naked, stripping, playing, sucking,
fucking

Did you know some contestants were lesbians some were
sluts, On one show a chick gave everyone a blowjob

including the camera MEN!!!!

Behind Closed doors, in changing rooms, dressing rooms,
in the bushes, private sets, closets, showers, lakes,
all sorts of places they thought the cameras were not
around, BUT THEY WERE and WE GOT THE SHOTS!!!!!

All the things that got Cut out, the
camera men saved them after the Network
cut them and banned them.

You Wont See this ON Jerry Springer!!!!!!!!

You Think Girls Gone Wild was HOT This is like
The Sexual Olympics, but only for Real

The Cameras Caught them - The Networks CUt them
WE HAVE THEM

Quick Before they get Cencored or Banned Here!!!

OutFuck - OutSuck
Who Will be the Last One Hard

All the things that got Cut out, the
camera men saved them after the Network
cut them and banned them.

You Wont See this ON Jerry Springer!!!!!!!!

I remember watching one of the Eddie Murphy movies and getting
disgusted. Here was a amazingly funny guy, and all the profanity just
got in the way, like you said.

If you want to listen to how profanity can be used properly in
entertainment, listen to Garrison Keillor. He will say a mild off color
word about once every 6 months, and it's very rarity makes for a real
kick. His 4th of July fireworks barge disaster is a classic in that way.

>accurate in their portrayal of BPL.
>
It just means they define "infrastructure" differently.

They don't consider the addition of fiber, taps or bypass couplers to be
"installation of infrastructure". They do consider ahving to run actual wires,
particularly into subscribers' homes, as "instalation of infrastructure".

Running the last mile of wire is expensive because of all the labor involved.
Running the last couple of dozen/hundred feet into the subscriber's house or
business is even more expensive because of the labor and having to work in
somebody's house or business. The liability is high, too.

> Since BPL is slower than some other broadband services, and the
>infrastructure appears to be similar to running fiber, is the slowing

>attributed to the "existing infrastructure" part of the line?

As I understand it, none of the systems uses the whole 2-80 MHz spectrum at the same time. This is because you couldn't "repeat" (amplify) without interfering with yourself. So a system might use, say, 30-40 MHz in one length of line, then translate to, say, 15-25 MHz for the next length so that the MV line doesn't have to break.

It appears that in the Penn Yan system, only one set of frequencies is used because the system only goes about 9 blocks.

> I'm ignorant of the finer details of BPL, so I may be way off here.
>
> Seems like if they have to run fiber, and do all the repeaters, etc.
>why not just..... run fiber and put the signals into the houses as
>they should be?

Because of the cost of getting the fiber in the houses, and the terminal equipment once it gets there. And back at the office.

To my way of thinking, the "best" answer with current technology lies in the various "Wi-Fi" ("wireless") technologies. No installation cost in the subscriber homes or businesses, no RFI issues, lots of bandwidth, and will even work with a lapper that isn't plugged in.

More than 15 years ago, I was talking about how we should each have a "personal fiber" that would handle all our comm needs - telephone, data, TV, etc. No EMI or RFI because it's light! But between the installation and equipment costs it's just not feasible. Yet.

There was also the fact that regulations prohibit certain things, in an attemprt to prevent monopolies. At least back then, a telephone company could not offer "cable" TV, and the cable company could not offer telephone service, because of federal regulations.

> Any good sources of the nitty-gritty of BPL technology?

One of the best (Carl, WK3C) replied to your post, Mike. Carl has experienced BPL first-hand.

>proximity to large communications centers (such as the 911 center about two
>miles from my house) already know about intermod. Hey, weren't cell phones
>supposed to be the new 'emergency' communications?

Let's get this straight. First off, it's not new. It'e been around
for over six years that I know of. The Comm Manager for Washington
County (where I live) was the one who found the cause of the
desensing and blew the whistle to APCO. Then other public safety
victims came out of the woodwork, including several clients of the
company that I consult for.

Secondly, it's not "cell phones". It's Nextel, a hybrid technology
system that emerged from Enhanced Specialized Mobile Repeaters
(ESMRs) which were legalized for-profit entities to sell local
repeater service to small or medium sized businesses on a multi-user
basis. The only relationship that it has to real cell-phones is
that it uses cellular digital technology and is used for "chatting"
rather than dispatching.

What happened was that when the 800 MHz band that was formerly TV
Channels 80-88 was reassigned, part of it went to the (common
carrier) cellphone service and the other part went to the land
mobile services with alternate channels assigned to Industrial and
to Public Safety licensees. The intent was for small businesses to
establish small networks based on high elevation repeater sites
carrying analog dispatch ("push-to-talk") communications, and the
Public Sefety folks to establish trunked local dispatch systems at
low-level sites.

Enter the Merger and Acquisitions Masters. Nextel, guided by a
maverick (who used to be at the FCC and screwed up his projects
there) started buying up those ESMRs and erecting high powered
cellular repeater sites at low elevations, most of which were close
enough to Public Safety trunked system sites to cause front-end
desensing from the full-time and full-channel digital voice systems
that they migrated to.

>The sad thing is that the FCC is largely a shill for large business now. It
>would't take a ton of effort for some kind of coordination to help avoid

>this problem - but, hey, no regulation is better than regulation, right?

APCO and Nextel worked out a solution which would mean moving
licensees out of the interleaved pattern into homogenous blocks
(like in the "good old days"), and worked out a financing plan, and
it's now sitting at the Wireless Bureau "awaiting action" (a euphemism
for gathering dust).

My disclaimer is the truth, Hans.

I've used several of the "Dummies" books. I have the one for Microsoft Office
on my desk at work. I haven't seen a bad one yet.

I have also seen many, many things on the internet passed off as "real" that
look real but which are only photoshops.
>

Jim,

I have to agree with Hans, your original subject
line created a distinct perception in me that you
disapproved of the dummies books and specifically
the dummies for ham radio book.

That was why I posted my own experiences of
reading and recommending dummies books for
internet.

Hey, I'm just another perspective...no harm done.
The RRAP postings have been pretty low volume
of late anyway :-) :-)

Cheers,
Bill K2UNK

Jim, sometimes people know exactly what you will say and what you mean
even if you never said what they know you meant to say forever!!

Oy!

Possible alternative interpretations:

"Look at this folks! A dummies book about ham radio. Who'd have figured
they would write one of those? Supposedly so few people want to become
Hams, how will they sell any of those books?"

"Some people in here think that Hams are dummies, and look at this
Dummies book that just came out! Sounds almost like a joke, but it's a

real book!"

Good luck with your prejudices, Hans and Bill!

Hold hands to cheeks when you say that. If it's really
astonishing, say "Oy gevalt!"

> Possible alternative interpretations:
>

> "Look at this folks! A dummies book about ham radio. Who'd have figured

>they would write one of those? Supposedly so few people want to become
>Hams, how will they sell any of those books?"

If it isn't published by ARRL it can't be any good, can it? :-)

> "Some people in here think that Hams are dummies, and look at this
>Dummies book that just came out! Sounds almost like a joke, but it's a
>real book!"

Could have been worse...a book printed with a title page and every
other page blank. Real thing. Was on the book market a few years
back.

I'm waiting for a similar book with no text content...only morse
code dots and dashes. After all, "morse code is the universal
language." Wouldn't need any translation.

> Good luck with your prejudices, Hans and Bill!

Are there codified prejudices now? Standard prejudices?

By photographic evidence in amateur radio periodicals, U.S.
radio amateurs are invariably White Males. Prejudice?

I'm still wondering why so few noticed the pre-print-delivery
advertisements on Amazon back in March. Another ham
saw them and posted in here. I posted in here on that.
Don't recall the same thing in QST. Maybe my eyes are
"prejudiced?" :-)

I guess for someone who didn't have ANY experience in ham radio, it might be a good start..... One does not become an Extra Class operator overnight. Ya gotta start somewhere.

Unfortunately the "mentoring" spirit is not like it might have been in the past. So, the texts the new potential hams will need should have as much information as possible in order to make them better hams.

Jim:
I haven't been watching the newsgroups as much myself..... When there is less than 5% of actual good debate/discussion on a topic (no matter how risque it is) it is not worth my time to wade through the arguments. I have had a schedule change which doesn't allow me the flexibility to respond like I used to. Than and pursuing Fire Officer 1,2,3 and yet another Associates and Bachelor degrees, my time is severely limited.

I do miss some of the debates/discussions of the past. Let's see what topics of policy or procedure we can actually discuss, without fighting about it.....

And with Carlin, also Gallagher and some other comedians who are "creative thinkers" who get you to actually think, and don't always resort to the "F" word, except for effect. I am a huge fan of comedy, as well as collecting antique radio broadcasts like Jack Benny etc.

This appears to be true.

2593. Amateur Radio Newsline™ Report 1391 – April 8, 2004

Newsgroup: rec.radio.amateur.policy
Date: 2004-04-11 03:25:40 UTC
From: radionews@aol.com
Message-ID: <20040410232540.29826.00000180@mb-m13.aol.com>
Source record: 90657

Amateur Radio Newsline™ Report 1391 – April 8, 2004

Amateur Radio Newsline report number 1391 with a release date of Friday, April 9th, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. It’s ham radio versus BPL in upstate New York. Hear the racket for yourself on Amateur Radio Newsline report number 1391 coming your way right now.

(Billboard Cart Here)

**

THE BPL FIFGHT: HAM RADIO VS. BPL IN PENN YAN N.Y.

If you have been wondering what Broadband over Powerline interference will do to your ability to communicate on the high frequency bands, here is a very graphic illustration. Take a listen:

--
Penn Yan NY Audio - BPL Noise
--

That recording of the 15 meter phone band was recently made by Dave Hallidy, K2DH, operating mobile in Penn Yan, New York and posted to the Rochester VHF Society website. It was made the weekend of the CQ WPXSSB Contest using a Yaesu FT-100D transceiver, a Tarheel Screwdriver antenna and recorded at a time when the band was loaded end to end with high power contest stations. And while you cold detect a few of them, the majority were covered up by the BPL grudge.

--
Penn Yan NY Audio With Signals Covered Up
--

In an Internet posting Mark Hoffman, K2AXX, who is Chairman of Rochester group described it as frightening to hear. He encourages all ham radio clubs and other organizations to contributed to the ARRL BPL Defense Fund as a way of fighting this threat to the ham radio bands. (K0BC, K2AXX, K2DH, QCWA)

**

THE BPL FIGHT: TIME TO GO TO COURT?

And Hoffman is not alone in his concern. Others on the Internet are circulating a more drastic approach. Some hams advocate taking the matter to court and try to have the interfering BPL providers charged with being a public nuisance or as a threat to our national security. (Various Internet

Posts)

**

ENFORCEMENT: UTILITY WARNED TO CLEAN UP RFI

An electric utility has been told for a second time to locate and fix an interference problem to a ham radio operator. Amateur Radio Newsline's Bruce Tennant, K6ZW, has more:

--

The FCC has sent a second letter to an energy provider warning it to clean up interference to a ham or face punitive action. The notice was sent directly to Wayne H. Brunetti who is Chairman, President and Chief Executive Officer of Xcel Energy based I n Minneapolis, Minnesota.

In his letter the FCC tells Brunetti that the agency notified him back in December of 2003 that it has received complaints of harmful radio interference possibly caused by equipment operated by Xcel Energy. That this interference has been reported by a ham living in Wellington, Colorado and that Xcel had been given 60 days to let the FCC and the ham know what steps were being taken to resolve the problem.

The FCC says that while Xcel did comply with its directive to respond, but as of the date of the latest letter the harmful interference reported to its office still remains unresolved. So the FCC told Brunetti that the company had 30 days to let the regulatory agency know what action Xcel has taken, or intends to take, in order to identify and correct the source of these radio emissions if they are being caused by its equipment. If Xcel fails to comply it could face enforcement action.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting.

--

As we go to air there is no word if Xcel's Burnetti has responded to the FCC. (FCC, RAIN)

**

THE BPL FIGHT: OPPOSITION GOES PUBLIC IN SOUTH AFRICA

BPL is also a big concern in South Africa and that nations national ham radio society has voiced its concern to the public about the introduction of Broadband over Powerline Communications in that nation. SARL -- the South African Radio League did this during the program "Technologic" which aired on Africa's D-S-T-V Business Channel.

Society president Graham Harlett, ZS6GJH, was interviewed at the National Amateur Radio Center. He said that the SARL is opposed to Power Line Communication because of its inherent interference to High Frequency radio communication. He noted that the interference is not limited only to frequencies used by Radio Amateurs. That it includes the military, civil emergency agencies and some broadcasting stations as well.

Harlett, says that extensive tests carried out in Europe, the USA and Japan has clearly shown this. A transmission line that carries power will become like an antenna at higher frequencies and render the high frequency spectrum unusable.

Harlett, who is a managing director of a South African consulting company voiced another concern as well. One that has not really been talked about in the United States. That of ingress to Broadband over Powerline systems from other radio spectrum users including hams. Harlett says that radio transmitters in close proximity to users of BPL are likely to cause interference to them because of the antenna effect of the long, unshielded powerlines.

Technologic was broadcast on Monday March 29th and has been repeated twice since its initial airdate. (Q-News)

**

HAM RADIO IN SPACE: SOLVING HAM-SAT INTERFERENCE

Meantime, the subject of interference to ham radio satellite was one of the topics at the recent meeting of the IARU Region One VHF Managers held in Vienna. Bill Pasternak, WA6ITF, reports:

--

As a result of research performed by OZ1MY, it now been shown that QRM that is occurring to ham radio satellites. Its primarily but not exclusively to 145 MHz satellite uplinks and mainly occurs when the birds are flying over Africa and the Middle East.

According to AMSAT, IARU Region 1 has a Monitoring Service which has been active for some years but which has, up to now, concentrated on frequencies below 30 MHz. In view of the wide area of QRM that can be caused by satellites and their ability to relay signals across international borders, the monitoring team has now agreed to scrutinize the satellite subbands as well.

Right now, what is needed are regular reports detailing instances of interference to the ham-sats along with audio files to back up each claim. The audio files will enable more precise identification of accents and dialects of those heard interfering. Hopefully, this will be a first step in getting those causing the interference off the satellites and off the ham bands as well.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF, in Los Angeles.

--

The IARU Region One Monitoring Service team is said to have good contacts which are used daily to remove intruders from the High Frequency bands. Hopefully they will be able to do the same on VHF and UHF as well. (AMSAT, Others)

**

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the N8JFA X-WARN Repeater serving Xenia Ohio.

(5 sec pause here)

**

ENFORCEMENT: FCC INVESTIGATES "PERFECT FIT"

Back here in the United States, the GCC Communicator reports that the FCC has launched an investigation into mattress warmer switching power supplies manufactured by Perfect Fit Industries. According to CGC, these supplies were never Part 15 RFI tested
and have been shown to create large amounts of problems to radio reception. (CGC)

**

CB NEWS: VK CB TELNET NODES ON THE AIR

Some interesting news about C-B -- Citizens Band radio -- down-under. Unlike the United States where C-B operation is hap-hazard with no structure, Australia has a CB Packet Radio System that rivals anything that ham radio has ever set up. And now, it is being linked over the Internet to C-B operations in other nations including many Europe. This is making it possible for Australian C-B'ers to connect with numerous other C-B stations throughout the world using radio and Telnet. Q-News Graham Kemp, VK4BB, has the nodes and the frequencies:

--

AUS002 Warren reports in Australia there are so far several CB Packet Radio Nodes and BBS's. These are AU4BNE Node 27.225 Usb Brisbane Q'ld, AUS011 BBS 27.225 Usb Brisbane, AU6PER Node 476.950 Fm Perth W.A and AU6BBS BBS 476.950 Fm Perth.

For the Amateur Radio Newsline, In Graham Kemp, VK4BB, of Q-News Australia.

--

So if you are scanning the 11 meter Citizens Band and hear digital signals, now you know exactly what they are. (Q-News)

**

RESCUE RADIO: NEW NYC ARES WEBSITE

Some good news out of the Big Apple. The Public Information Officer for New York City District ARES reports that the group has a new web site up and running. Among its features are links to each of the city's 5 borough ARES operations, a contact list of borough District Emergency Coordinators, a news page and much more.

Want to see it? You can. Its in cyberspace at www.aresnyc.org (K2VMR)

**

RADIO LAW: CABLE MAKES DECENCY OFFER

The cable television industry says that it will provide free equipment to allow subscribers to block unwanted channels. This in reaction to efforts on Capitol Hill to curb indecent programming.

Robert Sachs, president of the National Cable and Telecommunications Association, announced the plan at a recent gathering of cable industry executives. The offer is directed to about half the nation's 70.5 million cable subscribers who don't have cable boxes that can be programmed to block certain channels or programs.

The companies agreeing to the plan include the 10 largest in the country and reach 85 percent of all cable subscribers. (Published reports)

**

RADIO ON THE MOVE: WWVA MAY LEAVE WEST VA

Famed AM broadcast station WWVA in Wheeling, West Virginia may soon be heading to a new QTH. This, as Clear Channel Communications confirms that the company has filed an application with the FCC to move long-time 1170 KHz Wheeling radio station out of the state of West Virginia.

According to a report in the Wheeling News-Register, Clear Channel Communications Wheeling Vice President Scott Miller said the company has submitted an application to move the radio station to Stow, Ohio. This is a town located just north of Akron. Miller said it has not been determined whether WWVA will actually be leaving Wheeling, and noted that approval of such applications are extensive.

Broadcast pioneer John Stroebel brought WWVA on the air on December 13th, 1926 using home built 50 watt transmitter set up in the basement of his Wheeling home. By 1929 WWVA had increased power to 5000 watts and became one of the most listened to stations in the East. And, for many years before Clear Channel Communications bought it, WWVA held the honor of being one of the last clear channel coast to coast broadcasters left in the United States. It also helped to make the city of Wheeling famous, worldwide. (Listener reports confirmed by NRCDXAS)

**

HAMFESTS AND CONVENTIONS: VISALIA INTERNATIONAL DX CONVENTION

On the convention circuit, the 55th Annual International DX Convention sponsored this year by the Southern California DX Club will be held April 23 to the 25th. This is the worlds premiere gathering of hams interested in DX and DXing on any band from DC to light. A show that attracts attendees from Asia, Europe, Africa and Oceania as well as from across the United States.

Scheduled events include a contest forum, antenna forum, DX forum along with seminars for everyone from the newcomer to DXing to the seasoned pro. The top of the line manufacturers will be there on their own display midway where you can talk to the people who design and use the best of DX equipment made.

As in previous years, the venue is the Holiday Inn in the city of Visalia, California. For full details visit www.scdxc.org/visalia/ on the World Wide

Web. (SCDXC)

**

HAMVENTION 2004: AMSAT EVENTS

Two more special events timed to coincide with Hamvention 2004 to report this week. The Third Annual AMSAT "Pizza 'n' Suds" party will be held Thursday evening May 13th. Again this year the venue will be Marion's Pizza at 1320 North Fairfield Rd. The party will begin at 1830 and go until the last pizza is gone! Food will be ordered from the menu and drinks are available at the bar.

Also, the AMSAT Banquet will be held Friday evening at 1800. Location is the Amber Rose Restaurant at 1400 Valley St. in old north Dayton. As with past years the meal will be a buffet with a price of $25.00 per person. Reservations are required and the banquet is limited to 90 people maximum. Please contact Nancy Makley for reservations. Her e-mail is KC8GYW@amsat.org. (N8NUY)

**

HAMVENTION 2004: MEDIA CREDENTIALS

Still with Hamvention 2004, this to members of the working press who are planning to cover the event for commercial television, radio, newspapers or magazines. Media credentials are available to those organizations planning to send reporters. Complete information and a downloadable electronic application are on line at www.hamvention.org. Just scroll down on the left side of the page and click on the word Media. When the page loads, click on the word Media Credentials and follow the instructions that appear. (Hamvention(r))

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

WITH NEWSLINE: NEW SEATTLE ACCESS NUMBER

This note to listeners who get Newsline by telephone access from Seattle. Joybubbles, WB0RPA, tells us he has a new easy to remember number for that line. Its area code 206-333-6397. How is that easier to rember? Try it this way: 206-333-NEWS. And we thank WB0RPA for the information and for sponsoring the line. (WB0RPA)

**

HAM RADIO IN SPACE: ECHO STILL NEEDS $48,000

Turning to ham radio in space, AMSAT reports that as of March 30th it has raised $61,988 of the $110,000 needed to launch the new Echo ham radio satellite. That leaves about $48,000 still needed before the current target launch date of this coming June 29th. Go to www.amsat.org to find out how to donate to this very worthy project. (AMSAT)

**

HAM RADIO IN SPACE: PC-SAT 2 READY TO FLY

Also word that PCSAT 2 has passed its final outgassing tests putting it one step closer to launch. These outgassing tests are some of the most stringent in the space program. They are designed to protest crew members from fumes that might arise out of materials used to construct anything going into space.

Commercial manufacturers who spend millions of dollars to develop space safe materials might want to take a lesson from the hams. All the parts in PCSAT 2 are off-the-shelf ham radio items. The new bird uses Kantronics TNC's and Hamtronics transmitter and receiver boards that include all of the original plastic parts.

PCSAT 2 will go into orbit on the first shuttle when they return to flight next year. Additional information about the PCSAT 2 mission is available at http://www.ew.usna.edu/~bruninga/pcsat2.html (ANS, WB4APR)

**

WORLDBEAT - URUNGA - UGANDA: NO IT WASN’T APRIL FOOLS

Turning to news from around the world we have a correction on a sound-alike from last week. No, it wasn’t an April Fools joke. Again, here’s Q-News Graham Kemp, VK4BB:

--
Audio report only. Hear it in the audio newscast at www.arnewsline.org
--

So how did this one happen? Here is a clue. Try typing Urunga into your spell checker and see what it spits out. This one simply got away in the wee hours of the morning. (Q-News)

WORLDBEAT - HOLLAND: SKED CHANGES AT RADIO NETHERLANDS

This for Radio Netherlands listeners in North America. As of Sunday 4th April the station has dropped its 1200 UTC shortwave transmission on 11.675 MHz. Also, last week the station broadcast its morning program on shortwave at both 1100 and 1200 UTC due to the discrepancy in the starting dates for daylight saving time. From Sunday it will be on shortwave for one hour at 1100-1200 UTC on the afore mentioned 11.675 Mhz. (Radio Netherlands)

**

WORLDBEAT - EUROPE: THE 2004 SIX METER MARATHON

The Rientola Radio Amateur Club, operators of station OH3AG is inviting hams world wide to participate into the first Global Six Meter Marathon. The objective of the contest is to work as many DXCC countries as possible between May 8th at 0000 UTC and August 8th at 2400 UTC, doing so on six meters band. The results of this contest will be published during Tampere Six Meters Forum on August 14th when the Magic Band enthusiasts abroad will meet. You can follow this contest and get more information on-line at www.50mc.tk (RSGB)

**

DX

In DX, F5NQL says that he has been receiving many QSLs for the 5V7C Togo Dxpedition, but he is not the QSL manager for this operation. The correct QSL manager is Franck Savoldi, F5TVG, whose address is PO Box 92, 94223 Charenton Cedex, France. F5NQL is the DX editor for the French magazine Megahertz. (RSGB)

On the air, SM1TDE will operate from Tanzania mainly on CW, RTTY and SSB. He will be signing his call portable 5H3 through the 18th of April. QSL as directed by the operator. (RSGB)

**

THAT FINAL ITEM: HAM RADIO AND THE AMBER ALERTS REVISITED

And finally, an update to our story two weeks ago about AMBER Alerts. We mentioned that for the most part ham radio seemed to have little interest in this important public notification system designed to help find the victims of kidnappings. Now we learn of at least one Amateur Radio club that's at work preparing to handle AMBER Alerts. It's located in Eastern Pennsylvania where our own Amateur Radio Newsline's Mark Abramowicz, NT3V, is based:

--

Mel Salzman, W-3-M-E-L is the force behind the Dauberville DX Association in Reading, Pennsylvania, getting connected to the AMBER Alert system.

Salzman, Dauberville's president, says he first became interested in AMBER Alert about a year ago and began searching the Internet for information. The system enables law enforcement to issue bulletins to the public about missing or abducted children.

In some states, messages are transmitted by commercial radio stations similar to an Emergency Broadcast System message. AMBER Alert also relies on highway message boards and cable-television systems to get out information.

Its goal: To enlist thousands of pairs of eyes - whether they be motorists or truckers or neighborhood and community residents - to be on the lookout for the kidnapper of a child.

Salzman says he convinced the Dauberville group to put up a "ticker" or scrolling message on the club's website - D-D-X-A dot o-r-g, to display AMBER Alert information.

Salzman also says he has his home computer hooked up to receive instant AMBER Alert notifications, paying particular attention to Pennsylvania, New Jersey, Delaware and Maryland.

Salzman says his next step in connecting the Amateur Radio service to this effort was getting clearance from the club and the blessing of the FCC to transmit AMBER Alert information as a Q-S-T over the Dauberville group's repeaters.
"We have three repeaters," Salzman explains. "We can link all three repeaters if necessary and actually read the description, license plate number, whose been taken, what the guy looks like, whatever information comes through on my e-mail. That's what I'll put out on the air."

Salzman says the instructions are clear to any ham operator receiving the information and making a possible sighting.

"Call your local police, call 9-1-1 and give them the information," Salzman says. "If you happen to see that car or whatever description is out there, the car, what the driver looks like, call the police immediately."

Salzman says the Dauberville club has a modest, active membership, but many others in the region as well as those passing through the area use its repeaters and are supportive.

"We do have an active membership of, I would say, 20-25, and then people that they talk to," Salzman says. "You know how that could just snowballs. Like I said, the more people hear it, the more people are going to be looking, too."

Salzman says he hasn't publicized the Dauberville club's involvement with AMBER Alert. But Salzman says he's now preparing to reach out to other local clubs in the region as well as the Berks County ARES/RACES unit.

Salzman says he's also working to contact local law enforcement officials in greater Reading area to let them know ham operators are prepared to help by relaying AMBER Alert information.

So far, he says, the AMBER Alert system hasn't been activated much in this region. Salzman says that's a good thing. But, he says, the hams are ready if needed. Salzman says February's abduction and murder of 11-year-old Carlie Brucia in Sarasota, Florida affected him and others. Auto mechanic Joseph Smith is awaiting trial in connection with her death.

"I'd just like to really see this get going because it is extremely important. It just tears your heart out when you see these kids being abducted, especially with Carlie (Brucia), like when you find them and they're gone already. So, the more people involved, the better the results are going to be."

AMBER Alert was created seven years ago in memory of Amber Hagerman of Arlington, Texas. The 9-year-old was kidnapped while riding her bicycle near her home and later found murdered.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

If you want to know more about how you can involve the Amateur Radio service in your area in America's Missing: Broadcast Emergency Response - what AMBER stands for - take your web browser to www.missingkids.com. Then click on the words AMBER Plan. Getting a ham-radio assisted AMBER Alert plan started in your town could eventually save a child's life. (ARNewsline(tm))

2596. Fun with numbers

Newsgroup: rec.radio.amateur.policy
Date: 2004-04-11 14:05:58 UTC
From: "Dee D. Flint" <deeflint01@comcast.net>
Message-ID: <YYWdnfmMOfcHzeTdRVn-uA@comcast.com>
Source record: 90660

Using the table at http://www.speroni.com/FCC/Licenses.html

Combined number of General, Advanced, and Extra licensees in July 1999 ==> 289,669
Combined number of General, Advanced, and Extra licensees in April 2004 ==> 326,024
Increase in number of General, Advanced, and Extra licensees over the time period ==> 36,355
Number of Tech+ licensees in July 1999 ==> 133,979

Now the July 1999 Tech+ would have been eligible to upgrade to General and higher with only written tests. Even if they expired after July, they still had plenty of time to renew within their grace period and still upgrade to General and higher with only written tests at the time of the restructuring in April 2000.

From the above numbers, at most only 27% of the people eligible to upgrade with only a written test did so. The number would actually be less since some were the pre-1987 Techs who only had to submit a paper upgrade without testing, some would have been Techs who upgraded by taking code and theory, and some would have been Techs/Tech+ licensed since July 1999 who went on to upgrade too.

So we have OVER 97,000 people eligible to upgrade with just a written who did not do so. Any one care to venture an explanation as to why?

Continuing in this vein:
In April 2000 the number of Advanced licensees ==> 101,725
In April 2004 the number of Advanced licensees ==> 80,597
Change ==> 21,128

Thus only 21% either upgraded, died (and their family officially notified the FCC), or let their license expire. Why did so many choose not to upgrade? All they needed to do was take a written no harder than what they had already taken.

From: Amateur Radio Newslineï¿½ Report 1391 ï¿½ April 8, 2004

CB NEWS: VK CB TELNET NODES ON THE AIR

Some interesting news about C-B -- Citizens Band radio -- down-under. Unlike the United States where C-B operation is hap-hazard with no structure, Australia has a CB Packet Radio System that

***rivals anything that ham radio has ever set up.

And now, it is being linked over the Internet to C-B operations in other nations including many Europe. This is making it possible for Australian C-B'ers to connect with numerous other C-B stations throughout the world using radio and Telnet. Q-News Graham Kemp, VK4BB, has the nodes and the frequencies:

--

AUS002 Warren reports in Australia there are so far several CB Packet Radio Nodes and BBS's. These are AU4BNE Node 27.225 Usb Brisbane Q'ld, AUS011 BBS 27.225 Usb Brisbane, AU6PER Node 476.950 Fm Perth W.A and AU6BBS BBS 476.950 Fm Perth.

For the Amateur Radio Newsline, In Graham Kemp, VK4BB, of Q-News Australia.

--

So if you are scanning the 11 meter Citizens Band and hear digital signals, now you know exactly what they are. (Q-News)

Because many of these people are happy right where they are. I've long
said that there is a natural divide between the HF and VHF/UHF, much of
it based on propagation characteristics. There are simply many people
that are quite content with their access to a local repeater, and thank
you very much! 8^)

I think this is one of the mistaken impressions that a lot of people
have. Some people do not want to put up a big antenna, some people
aren't all that entranced about talking all over the world.

The fact that I would rather operate HF than VHF and up does not mean
that everyone or even a majority does.

I think it is a mistake to think that simply allowing Technicians HF
access is going to provide some kind of shot in the arm to Ham radio. I
suspect that many of them will continue on the local repeaters, or
whatever they were doing before they got the extra privileges

2600. The solution to Dumbing Down

Newsgroup: rec.radio.amateur.policy
Date: 2004-04-11 15:13:50 UTC
From: wa8ulx@aol.com
Message-ID: <20040411111350.19693.00000144@mb-m10.aol.com>

Subject: I have the solution to Dumbing Down
From: wa8ulx@aol.com (WA8ULX)
Date: 4/10/04 11:13 PM Central Daylight Time
Message-id: <20040411001336.10509.00000128@mb-m12.aol.com>

Well I was waiting till the time was right, its not right yet, but I might as well tell you.
First the solution to Dumbing Down is easy, we can thank BPL for the solution. I have been recording on Air QSO by Hams who have made comments in regards to Jamming BPL. I have also been saving messages by Hams which have stated the same. The recordings and messages are on CDs that I have and will continue to collect.
Since the FCC and so called Ham Orgs have decided that the best thing for Ham Radio is Dumbing Down, and I have decided that it is not the best thing.
Heres what Im going to do. As soon as the FCC converts Ham Radio into CBHAM Radio.
I will wait for the first BPL complaint by the Utilities, at that point the CDs will go to the Utility that is complaining, im sure there Lawyers will know what to do with the info, also a copy will go to the FCC. This should give the FCC and the BPL Company more than enought info to put the blame on HAMS. At that point I will also make a suggestion on how to solve the BPL problem. My comment to BPL and FCC will be to reduce power level of all HF Ham XMITTERS to 50 WATTS ERP or less, if 50 Watts to much then it can always be adjusted down, this should reduce BPL Problems.
What burden will that put on Hams, not much for the CW operators, now for SSB CBplussers it may be a problem, but it shouldnt be, you guys are so tallented you should be able to overcome that problem. Theres is more that I will recomend to BPL but I will save that for latter.

The numbers above certainly support that deduction better than any other. I suspect that there are a lot of people that simply want to be able to talk to people in their local area. Our club is running an upgrade class for those who would like to take it. There are only 8 people in the class yet we have at least 70 or 80 Tech/Tech+ licensees in the club. Now I realize that some people have conflicts such as shift work or other commitments but I would have expected a better turn out for this class as it is the first one we've done for an upgrade. Previously the people were simply encouraged to study on their own. The low number coming up to the class would tend to somewhat support the deduction that there is a fairly large group not interested in HF.

Care to take a stab at why the Advanced hasn't upgraded? Some have stated that they are doing it as a protest against reducing the code requirement but I can't believe that to be true of more than a very small number.

As KB3EIA sez, many are quite satisfied just the way things are.

But there are more reasons:

- A significant number of those in the database are inactive hams, ranging from
SKs to "no interest anymore" to folks who simply don't have the
time/space/money/energy for ham radio right now.

- A significant number of hams are simply unaware of the changes. As odd as
this may seem, I still encounter hams who have only the vaguest idea of how
much things changed in 2000. While that may seem incredible to us denizens of
internet policy groups and discussion boards, in fact it is quite common.

- Many hams are only vaguely aware of how the VE and renewal systems work now.
IIRC, ten years ago we were still using Form 610.

Same reasons as above. Plus one more: Some are under the mistaken notion that having an Advanced somehow "proves" they passed 13 wpm code and an allegedly tougher written test. That's simply not the case because of medical waivers *and* the unique circumstances after April 15, 2000 (if you had a valid CSCE or licenses for the Advanced writtens, plus either a license or CSCE for 5 wpm, you could get an Advanced after April 15 2000 without the 13 wpm code or a waiver.)

In any event, the numbers show that there are not huge numbers of hams beating against the imagined "barrier" of code or written tests.

Because they didn't care to yet. Nothing wrong with that. Some may simply be content with their current privileges. Some may be inactive at this time due to any number of reasons, and not 'plugged in' to amateur radio. Some may be permanently dis-interested.

I've long thought that everyone who wanted to be on HF in a meaningful way is already there, and that tinkering with the licensing requirements will have minimal impact in who we actually find on the air below 29.7MHz. I'd wager that an instant upgrade to Extra for every current licensee would result in less than 5% more stations heard on HF.

And that is part of the point. Changing the structure will make little to
no difference so let's not change it. The effort required to change exceeds
the benefit gained.

Cross-posted to: rec.radio.amateur.policy,alt.politics.homosexuality.hatemongers.phelps,alt.politics.regionalism.northcentral-us,alt.politics.perot,soc.politics.marxism,alt.politics.regionalism.moravia

We have been down this road before.

U.S. troops sent to war half a world away. American foreign policy controlled by an arrogant elite, bent on projecting military power around the globe. A public misled into supporting an unconstitutional war founded on deceit and fabrications.

As the death toll mounts, we hear claims that the war is nearly won, that victory is just around the corner. But victory never arrives.

As the public loses confidence in the government, the government questions the patriotism of any who express doubt about the war.

When a presidential election arrives, both the Democrat and Republican nominees embrace the policy of continued war.

The military draft comes to dominate the lives of America's young, and vast numbers who believe the war to be a senseless blunder are faced with fighting a war they do not believe in, or facing exile or prison.

The year was 1968. Because voters had no choice that November, the Vietnam War continued for another six years. Hundreds of thousands of Americans like you died, were maimed, or suffered from diseases like malaria. A far greater number of Vietnamese died.

Today, the war is in the quicksands and alleys of Iraq. Once again, under the pressure of a determined resistance, we see an American war policy being slowly torn apart at the seams, while the candidates urge us to "stay the course" in this tragic misadventure. Today's Presidential candidates are not Nixon and Humphrey, they are now Bush and Kerry.

Once again, there is one overriding truth: If war is the only choice in this election, then war we will have.

Today enlistments in the Reserves and National Guard are declining. The Pentagon is quietly recruiting new members to fill local draft boards, as the machinery for drafting a new generation of young Americans is being quietly put into place.

Young Americans need to know that a train is coming, and it could run over their generation in the same way that the Vietnam War devastated the lives of those who came of age in the sixties.

I am running for President, and have been against this war from the beginning. We must not waste lives in order to control and waste more

oil. Stand with us and we may yet salvage your future and Americas' future from this looming disaster.

Sincerely,
Ralph Nader

I'd say that is an excellent summation of what is happening.

Problem is, in the small minority of those doing the lifestyle thing of personally boosting their favorite activity, they tend to project too much of their own activity on others. Not everyone lives ham radio like the League pushes it in publications.

>I've long thought that everyone who wanted to be on HF in a meaningful

>licensee would result in less than 5% more stations heard on HF.

That's possible. But, to some of the "higher classes" those would be unimaginable and outrageous figures, those seeing doom, gloom, and wishing to take a broom to the heretics threatening Their favorite playground. :-)

For what it's worth, as of 6 April 2004, there were 282,948 no-code-test Technicians in the FCC ham database. That's a whopping 38.9 percent of all licensees who cannot, legally, operate on ham bands below 6 meters. That number is almost twice as big as the 146,174 or 20.1 percent who were General class licensees on that date.

Advanced class were 84,507 or 11.6 percent and Amateur Extras were 107,343 or 14.8 percent. Novice was only 38,814 or 5.3 percent and Technician Plus almost twice that at 67,359 or 9.3 percent.

There WOULD be a significant playground "threat" should the no-code-test Technicians get a piece of the HF action. Might be true doom and gloom plus the hue and cry of alarum from those who think that HF was made only for Them.

Should be clear that HF denizens need more space to play.
Nobody seems to be active on doing that. All that happened
in the relatively recent time resulted in five "channels" on 60 m.
According to NTIA Spectrum Projections, an endnote says
that ARRL "requested more bandspace" a dozen years ago.
The only thing on the current WRC-07 agenda is the 136 KHz
LF band consideration "for study."

Where are all the bandspace Activists?

That number includes expired licenses which are in the grace period. As of April 11 2004, the number of current (non-expired) Technicians is 262,804.

> no-code-test Technicians in the FCC ham database.
> That's a
> whopping 38.9 percent of all licensees who cannot, legally,

Incorrect!

Since April 15, 2004 (4 years ago as of this coming Thursday), FCC has been renewing all Technician Plus licenses as Technician. In addition, any Technician who has passed Element 1 gets Novice/Technician Plus HF privileges even though the license and database still say "Technician".

So a sizable number of those with Technician licenses *do* have some access to four HF ham bands.

I have heard some advanced that say they want to "prove" that they took
a higher speed Morse code test and won't upgrade. Weird stuff for sure.
As much as I do support testing for Morse, I consider the tests a lot
more important. However there are a fair amount that consider the fact
that they took a faster speed test to be the more important thing

Some advanced amateurs may be inactive, although I doubt it is enought
to account for all. It's probably a combination of factors.

And there you have it. I believe that we must address the element 1
issue, because it has been changed by the ITU. But beyond that, I
challenge people to provide the proof that the divide between Technician
and General is harming Amateur radio. Especially with Element 1 removed.

When we try to fix something that isn't broken, we usually succeed in
breaking it.

This (me) pre 1987 Tech decided to do a paper upgrade to General, but while
I'm at it, might as well go for it and got the Extra. Took some
practice tests
on the web and did well enough to make going for it a no brainer. I had
dabbled
with HF years before on 10 meters novice enhancement SSB subband, and
I figured I wanted to upgrade to get more privs on HF. Upgrading also
"locks
in" credit at the FCC for the 5WPM and General written I passed back in
1976 to get
my pre 87 tech.

You will find that I never start an "off-topic" thread and that most of my posts do seem to relate back to the original topic, even if the post I'm responding to is off-topic. I certainly am not a regular in that I don't post 10 times/day like some of the other characters do - I'm only here once a week at most.

Ho ho ho...you HAVE to start this all over again, don't you?

I just look at www.hamdata.com and accept that.

If you a terrible need to point fingers and cry "shame, wrong!" then go argue with the hamdata folks.

Tell you what, Rev. Jim, YOU download the ENTIRE FCC database and pass out copies on CDs. That way anyone can be very busy little bees and MASSAGE data any way that suits them.

>> no-code-test Technicians in the FCC ham database. That's a
>> whopping 38.9 percent of all licensees who cannot, legally,

>Since April 15, 2004 (4 years ago as of this coming Thursday), FCC has been >renewing all Technician Plus licenses as Technician. In addition, any >Technician who has passed Element 1 gets Novice/Technician Plus HF privileges >even though the license and database still say "Technician".

Jimmie, Jimmie, Jimmie. Try to stay in focus without your fuse getting lit. :-)

On 6 Apr 04 the number of all US amateur licensees, less club calls, was 727,145. Divide that into 282,948 and you get 38.9%.

That's OVER one-third of all licensees...even if you insist on your VERSION of numbers.

If you can't show the EXACT numbers of ALL those T+ conversions to T or all those that "passed Element 1" then you be wrong, wrong, wrong, wrong, clong. :-)

Why did I pick 6 April 2004? [funny you should ask] It's copied into several of my Comments on the 4 Petitions for 2004. If you

want to pick at flyspecks, go to the ECFS and let the FCC know.

I could pick 11 April and get those numbers. But, tomorrow, when
you finally see this, it will be 12 April and there are new numbers.
Good...then you could shout all over "He's wrong! He's wrong!"
:-)

All you are doing is poor MANUFACTURING of a dispute. As you've
done many times before. [shoddy manufacture, poor QC]

So, do you WANT all HF hams to sit forever in little tiny bandspaces?

LHA / WMD

You "started" it, Len. You posted some interesting numbers. I'm simply
clarifying what they mean.
>
> I just look at www.hamdata.com and accept that.

OK, fine. Those numbers include expired licenses that are in the grace period.
The number I posted do not. No problem.

> YOU download the ENTIRE FCC database
> and pass out copies on CDs. That way anyone can be very

In addition, anyone whose license has expired but is still in the database due
to being in the grace period cannot, legally, operate on any ham bands at all
until their license is renewed.
>

> On 6 Apr 04 the number of all US amateur licensees, less club
> calls, was 727,145. Divide that into 282,948 and you get 38.9%.

That's true. However, a significant number of those *do* have access to some HF amateur frequencies. Your statement

"no-code-test Technicians in the FCC ham database. That's a
whopping 38.9 percent of all licensees who cannot, legally,
operate on ham bands below 6 meters."

Is simply not correct because it ignores Technician Pluses renewed as Technician, as well as "Techs-with-HF"
>
> That's OVER one-third of all licensees...even if you insist on your
> VERSION of numbers.

Your version is still incorrect.

Mostly white males. I've seen the occasional woman show up in a pix.
Less African American men or women. Spanish heritage is fairly common.

There are problems getting *especially* women interested in the
technical fields. On our "Bring your sons and daughters to work day" we
always ask the kids what they want to do for a living. None of the young
ladies have indicated they want to go into engineering yet. A majority
have said they want to be lawyers!

I wonder why. I doubt engineers are more sexist or creepier than any
other subset of males.

When in doubt, blame it on Liberals?? 8^)

An interesting situation. I was reading that last night.

my thoughts are:

1. The ham op did well despite his embarrassment in having participated
in a false alarm.

2. Law enforcement and emergency people would have him react the same
way if the same situation cropped up again. His job was as a
communicator. It wasn't (or shouldn't be) his decision to report the
problem or not. Someone calls for help, then it gets reported. If
someone gave a false report to him then it becomes law enforcement's job
to take care of it at that point.

I say he did a good job.

Did you read the part in the thread about the guy that *couldn't* get a
ham to turn in an emergency call? Chilling.

If even one amateur in your omitted "2 year grace period" renews, your
numbers will be incorrect also.

I think its safe to say at this point that your numbers will be
incorrect by the end of the day, if not sooner.

Best of Luck.

Billy

"The reports of its demise are greatly exaggerated..."
[paraphrase of Mark Twain's comment on his alleged obituary]]

Neither Packet nor BBSs [Bulletin Board Systems] are "dead." They
have simply evolved, changed slightly from their original practice.

Note that Australia is a whole other continent and somewhat far from your neighborhood. It is not a good thing to evaluate anything in terms of your own experience and what is familiar to you...and certainly not in terms of what you, yourself, particularly desire.

Unknown. It was on the book market for over a month and actually
received literary comment in the press! Not on content, primarily on
general chutzpah of the "author" and the publishing company.

There's somewhat the same sort of chutzpah on the part of a
certain New England publishing corporation...

You would do well - on criticism of gender content in engineering - to
look at the periodicals of the IEEE or ACM in regard to women in
engineering. Particularly in high office positions of the IEEE and ACM.

Notable example: Carly Fiorina, CEO of Hewlett-Packard.

> I wonder why. I doubt engineers are more sexist or creepier than any
>other subset of males.
>
>When in doubt, blame it on Liberals?? 8^)

Why do you single out engineers? I was not discussing engineers.

Engineers are human. But, engineers are forced to obey the laws
of physics first in order to stay employed as engineers. No physical
laws are changeable by human legislation.

Radio amateurs, by contrast, seem very much inclined to fantasy,
group-think, imagination, and some considerable misogyny as well
as rigid conservatism in standards and practices. Examples of that
have been in here for years.

>> Your version is still incorrect.
>
>If even one amateur in your omitted "2 year grace period" renews, your
>numbers will be incorrect also.

Brian, Rev. Jim can't admit any wrongdoing if there is the slightest
negativism implied against his beloved telegrapy.

His newsgrope tactic is to bring out as much misdirection as
possible of anyone speaking in the slightest against morse code
or the highly-conservative, rigid thinking that U.S. amateur radio
is all about telegraphy skills.

Example: Each and every no-code-test Technician class licensee
that obtained their first amateur license obtained their Technician
license WITHOUT taking any telegraphy test. Those former
Technician Plus licensees whose renewal put them into the
Technician class category after 2000 seem to have disappeared
from the misdirected meanderings of Rev. Jim. He only wishes to
mention those [no numbers supplied] Technician class licenses
who SUPPOSEDLY took and passed an element 1 code test as

"destroying" my comment as "incorrect."

Note that I used a specific data compilation date. For those that bother to look, such is quoted on previous Comments to the four Petitions for Rule Making filed in 2004. Rev. Jim uses a NEW date, a later one, as if to say that His data is somehow "more correct" even though it does not present any definitive numbers on all those Technicians who supposedly passed a separate code test, nor any of those Technician Plus classes whose renewal automatically placed them in a different class category.

No data = vaporware. But, he MUST be correct because he says others with data are "incorrect." Remarkable!

Rev. Jim argues on some vaporous claims which he cannot support with real numbers. I merely quote some accessible-by-all statistics from www.hamdata.com which massages the publicly available [but huge] amateur database file from the FCC in order to provide some specific information as to license class totals and other periodic information.

>I think its safe to say at this point that your numbers will be
>incorrect by the end of the day, if not sooner.

It is safe to say that ANYTHING I say will be refuted by Rev. Jim using his common vaporware misdirection tactics displayed on this subject thread and many others in the past.

The end result is a lot of electrons wasted in discussing something not on the original subject, a common tactic by newsgroupies. Such misdirection concentrates on a communicator's alleged personal faults instead of the message subject.

And, when misdirection has been explained and refuted, Rev. Jim gets all upset and huffy about "not being respected for his accuracy" in using vaporware opinion concepts. :-)

Oh No! in the context of what I was saying a long time ago when this
was first posted was that Hans and Bill had *their* prejudices in
assuming Jim was posting a disparaging comment in the Subject line.

And remember, If I did approve of prejudice, I wouldn't want it easy.
Remember, I am the whack that likes things to be hard work! 8^)

The topic goes where it will. You were discussing Ham radio, which is a technical hobby. Engineers run to the technical by by nature. And there seems to be some problem in attracting women to the technical fields.

"1200 baud" (actually 1200 bits per second) is about equivalent to
1200 words per minute as by:

1200 bps = 120 characters per second at 10 bits per character in
the ASCII 8-level character coding commonly used now.
120 characters per second = 7200 characters per minute.
If one "word" consists of 5 text characters plus a space character
(a common measure of throughput in telegraphy the century
before the last one), then 7200 char/min = 1200 words/min.

If the average "fast" radiotelegraphy rate is 20 words/minute,
then "1200 baud" is SIX HUNDRED TIMES FASTER than
average "CW."

Given the two vastly different communication rates, which one is
the "slow" one?

You said you thought packet was "dead." When I wrote (after the ellipsis) "certainly not in terms of what you, yourself, particularly desire" then that does not say you "desire" anything in regards to "packet operations," does it?

If you don't find "packet operations" in your ham neighborhood, then you are certainly free to think it is "dead" but only for that radio neighborhood you frequent. It is incorrect, reqardless of another 2-land schoolmaster-cum-moderator's "correctness" opinions to make absolute statements when there is obvious evidence that packet operations are continuing on another large continent far away from the USA...and reported on the Amateur Radio Newsline.

You are free to explore who uses packet radio methods at www.tapr.org, the website of Tucson Amateur Packet Radio.

I don't see any "prejudices" other than in individual preference
for or against the telegraphy TEST for amateur radio licensing.

Hans Brakob is on public record as being a definite fan of radio
telegraphy...and as against the amateur radio telegraphy test
in the future for the purposes of amateur licensing. Bill Sohl is
on public record as having taken an amateur radio telegraphy
test to obtain a license grant and is also a Director of NCI.

The first posting of a "new book" ("Ham Radio For Dummies" as
appearing on pre-print advertisements at Amazon) was done by
someone using a pseudonym in posting. The second posting in
this newsgroup on the same book was done by me. Miccolis
was the THIRD person to post on that new book, using another
subject header.

You cannot deny that the title "Ham Radio For Dummies"
carries some emotional loading to create different impressions
to anyone reading it for the first time.

> And remember, If I did approve of prejudice, I wouldn't want it easy.

> The topic goes where it will. You were discussing Ham radio, which is a

>technical hobby. Engineers run to the technical by by nature.

Electronic engineers and electronic technicians are FORCED to
work in their chosen field by the laws of physics. Human legislation
cannot change natural laws of physics.

Radio amateurs OPERATE according to legislated regulations
and the status-quo-ists in here tend towards those regulations
that were considered "best" in the 1930s, 70 years ago.

Only a minority among licensed radio amateurs can adequately
be considered "technical" about electronics-radio sufficient to
understand it.

>And there
>seems to be some problem in attracting women to the technical fields.

By all the photos, Hewlett-Packard's Carly is very much female.

A bit of searching and observation will find a surprising percentage
of females in "technical" fields such as electrical and electronic
engineering, information technology, medicine, medicines, physics,
higher mathematics, and even vehicle design and engineering.

There is little evidence that females are "into" automobile repair,
NASCAR pit crews (there are only a few drivers, none in pit
crews), or oil-field drilling. Those are "technical" fields.

>> Engineers are human. But, engineers are forced to obey the laws

For what it's worth, all 282,948 of those no-code-test Technicians were
free to take the appropriate examination and receive authorization to operate
on HF.

As of 6 April 2004, no person has ever been barred, restrained, detained,
blocked or otherwise impeded from taking ANY Amateur Radio exam by any other
person or entity, private or public, real or imagined.

JJ, I'm sure it is much more pleasant from your perspective.

You see no evil, hear no evil, but spew as much of it as your mean
little heart desires. It is fairly cowardous of you to malign a ham
by callsign who isn't even posting here, yet you remain anonymous.
Time for you to authenticate.

2649. Just how necessary is a new Novice class?

Newsgroup: rec.radio.amateur.policy
Date: 2004-04-13 03:58:22 UTC
From: jason_hsu@my-deja.com
Message-ID: <f7d9a152.0404121958.72f215c3@posting.google.com>
Source record: 90713

The ARRL and the new NCVEC petitions call for creating a new Novice class and upgrading Technicians to General. (I already commented on the ARRL petition to the FCC.)

I'm not upset with the ARRL about this. The directors did what they felt they had to do. But I'm still puzzled by parts of the proposal.

The highly controversial proposal of upgrading Technicians to General is the result of insisting that all license classes be merged into just 3 without downgrading privileges for any class. It's a game of License Class Survivor, and all classes but 3 have to be voted off the island. General and Amateur Extra are (correctly) considered too important to eliminate, and Advanced licenses get upgraded to Amateur Extra. So only one more license class can remain, and the ARRL and NCVEC think that the Novice should remain and be reopened, and the Technician license should be voted off the island. Because of the "no downgrade" condition, Technician licenses are upgraded to General.

Is the No-Code Technician license THAT hard to get? During the years when both the Novice and No-Code Technician licenses were available for new hams, the new hams (including myself) overwhelmingly chose the No-Code Technician. What's now the Technician exam was two separate tests back then - Novice and Technician. Both the Novice and Technician licenses required passing the Novice exam plus one more exam. For the Novice license, the 5 wpm Morse Code exam was the additional exam. For the No-Code Technician license, the Technician exam was the additional exam. By at least a 20:1 or 30:1 margin, the new hams chose the No-Code Technician exam. The new hams (including myself) clearly thought that preparing the Technician exam was MUCH easier than preparing for the 5 wpm exam. But in spite of this, the ARRL thinks that the current Technician exam (a merger of the old Novice and Technician exams) is too hard but says that the 5 wpm exam is quite easy and uses this view as a partial justification as keeping the 5 wpm exam requirement for the Amateur Extra license.

The record is clear. The No-Code Technician license made the Novice license obsolete. In the 2000 restructuring, the FCC closed the Novice class for the same reason GM closed Oldsmobile - not enough takers to justify the administrative costs and labor required.

Given all this, is it SO necessary to bring back the Novice class at the expense of the Technician class? Why didn't the ARRL propose a 4-class system so that the popular Technician class could be kept?

My theories on why the ARRL thinks the Novice license is more important than the Technician license:

1. The ARRL directors couldn't agree, so they proposed a compromise that they felt would promote good PR. I don't think they seriously expect the FCC to approve it.
2. Nostalgia about their Novice days led them to want to reopen and reintroduce the Novice class.

> Is the No-Code Technician license THAT hard to get?

I would venture to say it is harder to get than the Novice (if we
still had novice testing) . That's the
problem as percieved by ARRL, NCVEC and other.

> During the years
> when both the Novice and No-Code Technician licenses were available
> for new hams, the new hams (including myself) overwhelmingly chose the
> No-Code Technician.

But that's probably because you were an adult and only the Tech
gave sufficient VHF capability to allow you to engage in voice
operations, especially via FM.

> What's now the Technician exam was two separate
> tests back then - Novice and Technician. Both the Novice and

But that was again most likly because you didn't want to
be limited to the Novice HF and limited VHF privileges.

> But in spite of this, the

I agee only to the extent that VHF operations had become a much
greater part of ham radio capabilities.

> In the 2000 restructuring, the FCC closed the
> Novice class for the same reason GM closed Oldsmobile - not enough
> takers to justify the administrative costs and labor required.

True to a point, but that again was a result of operating
privileges, not (IMHO) the locense difficulty of 5 wpm.

> Given all this, is it SO necessary to bring back the Novice class at
> the expense of the Technician class? Why didn't the ARRL propose a
> 4-class system so that the popular Technician class could be kept?

You'll have to ask ARRL...but before you do, kook at the
privileges to be granted to new Novice class under both ARRL
and NCVECs petition. Before the Novice was almost an exclusive
HF with code operating license. That will change significantly.
The Novice was a gateway for many of us when getting on the
air really was pretty much an HF only thing. The Novice clearly
offered a great starting point for youth...far more than does
today's tech.

> My theories on why the ARRL thinks the Novice license is more

I disagree. I believe they want an easier entrance license than
tech that allows youth to get a license AND offers a full array
of operating privileges (HF, VHF, SSB, FM, CW, etc) to that
license. Today's Novice is effectively an HF non-phone lcense
and todays Tech is clearly a VHF/UHF only license. That's
the problem.

Cheers,
Bill K2UNK

Fiorina holds a bachelor's degree in medieval history and philosophy
from Stanford University; a masters degree in business administration
from the Robert H. Smith School of Business at the University of
Maryland at College Park, Md.; and a master of science degree from MITï¿½s
Sloan School. She is technical only if you consider business technical.

You are right, she is unmistakably female. And my new H-P computer is a
fine machine. I think she is doing a pretty good job there.

> A bit of searching and observation will find a surprising percentage

A quick LexisNexis search shows 9.9 percent of engineers in 2000 were
female. And the numbers of female students pursuing engineering degrees
is dropping a bit. I don't have an overall number for that because the
numbers are broken down by ethnicity. I don't feel quite comfortable
enough with the statistics to compile an overall percentage for the
current students. But I do not find those stats all that high.

> There is little evidence that females are "into" automobile repair,

Interesting take on the issue, Jason.

My main concern is that there is a precedent in the proposed mass upgrade:

If the existing Technicians are upgraded to General, this means that
after we do this, we are discriminating against all that come afterward.
There will be a *powerful* argument that "The Tech elements were good
enough for the majority of hams to become General, so why should I have
to take a harder test?"

And although there is really no test process needed at all to get on HF
(witness CB'ers that run illegal power levels) I believe that we should
foster technical knowledge qualifications for the ARS.

> Is the No-Code Technician license THAT hard to get? During the years

Not difficult at all. Many people have taken and passed the test. I
can't think of any good arguments for reducing it.

5WPM is easy for some, and not at all easy for others.

jason_hsu@my-deja.com (Jason Hsu) writes:

>The ARRL and the new NCVEC petitions call for creating a new Novice
>class and upgrading Technicians to General. (I already commented on
>the ARRL petition to the FCC.)

The NCVEC suggested COMMUNICATOR class entry-level license
a bit different than the ARRL proposal.

As you surmised at the end of your post, ARRL wanted to
resurrect the old Novice out of nostalgia. All the evidence of
the ARRL's prodigious output points to such nostalgia.

NCVEC took a fresh approach to ENTRY-LEVEL class. Their
choice of "Communicator" as a name carries no emotional
baggage of "negative" ranking. Radio operating IS communicating,
and labeling anyone as a total beginner, or forcing them into some
kind of recruit training camp is not a good way to attract anyone.

>I'm not upset with the ARRL about this. The directors did what they
>felt they had to do. But I'm still puzzled by parts of the proposal.

You shouldn't be if you've tracked them enough.

ARRL is a membership organization which has, for most of the
past half century tried to be a "level of government" ex-officio in
the curious way that humans in fraternal organizations get when
they get a taste of power and control. :-)

ARRL is also beginning to worry about survival. Membership is
(or was in December) down to 21 percent of all licensees. It may
be on a dropping trend. This effects periodicals that depend on
advertising space sales to fully support periodical budgets; CQ is
the remaining USA ham periodical, the others dropped due to
shrinking (for printed media) ad sales. Internet is siphoning off
some of the potential ad monies, monies that are finite. ARRL
does NOT represent the majority of USA radio amateurs, only has
obligations to its membership. While demographics are informal,
ARRL has failed to get enough members from the 38% of all
licensees now making up the Technician class nor the 9% that
are Technician Plus (until the last one in 2012).

>The highly controversial proposal of upgrading Technicians to General
>is the result of insisting that all license classes be merged into
>just 3 without downgrading privileges for any class.

It's Realism in looking at the near future. No new licenses in the Novice, Technician Plus, or Advanced classes have been issued since 2000. The action of not doing anything will result in those three classes (26% of all right now) being "downgraded" to "lower" classes on renewal. Any way you slice that, it is a negative-esteem action which WILL happen if nothing is changed. If some of those are disenchanted with being "downgraded," they will simply drop out. Overall numbers would shrink.

Automatic merging of those 26% into the next-higher class is a positive-esteem thing for them...and only hurts the egos of all those rank-status-privilege individuals who demand that all have to do as they did, blah, blah, blah, as if the regulations were cast in armor-plated concrete by some radio divine force.

So, for a quarter of all licensees, it's a matter of moving them "up" or "down" which really doesn't affect anything in the hobby, just the emotional mindset of a few.

>Extra. So only one more license class can remain, and the ARRL and
>NCVEC think that the Novice should remain and be reopened, and the
>Technician license should be voted off the island.

Not quite. NCVEC differs from ARRL in dropping the historic and negative-connotation of "novice" and starting a NEW entry-level category. NCVEC can see that there IS competition from many other ways to communicate, that times have changed, and isn't afraid to pioneer.

NCVEC does NOT want to "reopen" the Novice. Novice class, despite the nostalgic attachment of some long-timers, was a failure as an entry-level category. The numbers of licensees constantly dropping in the Novice class proved that. Communicator class is a NEW concept in structure and privileges. Resurrection of Novice class from the dead isn't a religious event and shouldn't be treated as such.

>Because of the "no
>downgrade" condition, Technician licenses are upgraded to General.

Why is that a negative thing?

Sooner or later, all those who think amateur radio is all about Their rank-status-privilege in some imaginary "service" are going to have to concede that ham radio is not a quasi-military "service" with all the pomp and circumstance They think are "due" Them for existing.

Amateur radio is a voluntary avocational activity involving radio. It is a HOBBY despite the self-perceived nobility of class titles.

>Is the No-Code Technician license THAT hard to get?

It shouldn't be, but it IS difficult for some that don't know anything about any radio other than operating the common front-panel controls of consumer electronics thingies. Try putting yourself

in their place, including a desire to operate their own radio station. Remember that being granted an amateur radio license of any "rank" doesn't make YOU some kind of nobility in all radio. The FCC has to, by law, be concerned with ALL citizens, not just those claiming noblesse oblige in a particular radio service, one of many civil radio services they must, by law, regulate.

That you cited your own experiences in entering amateur radio is not relevant to the discussion (despite personal protestations). The NUMBERS of no-code-test Technician class licensees entering amateur radio for the first time over the last 13 years prove several things: The overwhelming interest of newcomers is not about becoming a grande glorious radiotelegrapher; That amateur radio licensee total numbers would actually be shrinking without that Technician class license...12,000 NEW licensees in the last year came in through that class, only a fractional percentage through the other two...the overall growth for one year was only 0.14% according to www.hamdata.com.

An amateur radio license is NOT a diploma or a certificate of achieving anything other than a federal grant to transmit RF emergy according to regulations. The license - and its "rank" - is NOT the only way to actually learn anything. Several hundred questions MIGHT yield some knowledge on radio and certain regulations in a radio service, but REAL knowledge and skill acquisition is up to the individual.

>The record is clear. The No-Code Technician license made the Novice
>license obsolete.

I'd say it SUPPLANTED it. Novice remained an entry-level license class until 2000, 9 years after the no-code-test Tech was created. Novice class totals were beginning their drop trend before 1990.

>In the 2000 restructuring, the FCC closed the
>Novice class for the same reason GM closed Oldsmobile - not enough
>takers to justify the administrative costs and labor required.

Not a good analogy. FCC closed THREE classes, not just one.

At 6 classes of license, the regulations had become too convoluted and complex to justify existance in a voluntary, avocational activity.

The rank-status-privilege nobility (those who had achieved top of the respect-is-due-them food chain) was generally furious at Order 99-412. An imaginary sky fell on their carefully cultivated egos.

FCC never sold licenses. ARRL sold the concepts of many ranks and associated privileges and did most of the USA advertising to Upgrade! Upgrade! Upgrade! :-)

>Given all this, is it SO necessary to bring back the Novice class at
>the expense of the Technician class?

ARRL wants nostalgia of the BoD's long-vanished youth. They
want to be the Lone Ranger with the opening line of "Come with
us now to the days of yesteryear...!" <up the stirring "charge"
music> <roll opening credits>

NCVEC is at least 8 VECs and isn't ruled by the ARRL. ARRL
may finally feel some pressure from not being as respected as
they think they should be.

>Why didn't the ARRL propose a
>4-class system so that the popular Technician class could be kept?

Why should the Technician class be a "separate but (not) equal"
category?

Repeating a failed experiment of long ago isn't a good thing.

>My theories on why the ARRL thinks the Novice license is more
>important than the Technician license:
>1. The ARRL directors couldn't agree, so they proposed a compromise
>that they felt would promote good PR. I don't think they seriously
>expect the FCC to approve it.

I disagree. ARRL has found itself in the uncomfortable position
of having to compete for "leadership." That's been growing for
nearly two decades. The 2nd Petition (RM-10867) may be their
"last hurrah" effort to restore their concept of leadership. I think
they are sincere despite a lot of obvious compromise efforts.

>2. Nostalgia about their Novice days led them to want to reopen and
>reintroduce the Novice class.

I agree with that. But, as the old saying goes, "Nostalgia isn't
what it used to be..."

LHA / WMD

2654. The ham spirit is well dead

Newsgroup: rec.radio.amateur.policy
Date: 2004-04-13 18:44:48 UTC
From: Anonymous <nobody@paranoici.org>

On the site swap.qth.com, some guys try
to trade ham-radio equipments. Most of
the ads are fake either the seller is a
crook or the wares are still sold but
not removed from the site.
Sellers consider buyers like pidgeons,
some say that their equipment is "mint"
although in reality its in poor
condition (even with non-working
functions or totally dead). Once sold,
they do not take the time to remove
the ad from the site, considering that
everybody on Earth has the time to
read their lies and to mail them to get
a "SOLD" answer one week after.

The ham spirit has now totally
disapeared, there is no ham community,
all is business in a wild jungle.
Like on EBAY (far better than ham sites)
it will be essential to make an
evaluation note on the sellers and
buyers in order to get rid of crooks
and bad guys. Having a callsign is not
a proof of respectability. Take care !

Probably was harder than the Novice, at least question wise. but we
aren't talking about orders of magnitude harder. I like how Jim N2EY
puts it, that the old tests tested more in depth on fewer subjects,
while the new Technician tests test more subjects to lesser depth.

>>During the years

That is a *big* reason, and was why I went the Technician route. A smaller reason is the element one test. For some of us, that was a lot harder. But both were a big part of the demise of the old Novice class.

>>What's now the Technician exam was two separate

I think it was a little bit of both, Bill. Mostly privileges, but there is a sizable minority that find Element 1 daunting. If I hadn't, I probably would have become a novice long before they ever had a no-code Tech.

But is the Technician license all that hard? I barely studied for mine,
I might be as guilty as the PCTA's that like to talk about how a person
can "get" Morse in one weekend, but I'm amazed that people would
consider the Technician test too hard.

Indeed, if we support the lowered power limits, and all, is there a
good argument for simply letting Novices on the air with no
requirements? Learn as they go?

Granted, a No-Code Novice (if it existed) would be easier to get than
a No-Code Technician license. But if the No-Code Technician license
was too hard but the Coded Novice license was easy to get, then why
didn't more new hams get the Novice license first and then upgrade to
Technician Plus later?

> > During the years
> > when both the Novice and No-Code Technician licenses were available

OK, but giving Tech Plus privileges to No-Code Technicians would give
this new entry-level class the same HF privileges that the Novice
licensees have. Also, removing the 5 wpm requirement for the General
class would make it easier for No-Code Technicians to upgrade. This
would resolve the issue of the lack of HF privileges for the No-Code
Technicians. If the Novice/Tech Plus HF privileges aren't enough,
then an expansion of them would be called for. A modest expansion of
Novice/Tech Plus HF privileges would be MUCH more sensible than
automatic upgrades to the General class.

Although I believe the 5 wpm exam should be eliminated for all license
classes, I oppose the free upgrades from No-Code Technician to General
because the Technician exam was never intended to prepare people to
use General class privileges and the General class license was never
intended to be an entry-level license. Most people (except for a few
of the most strident pro-code testers who want to brag about passing
the 13 wpm exam) have no objections to the free upgrades from Advanced
to Amateur Extra since most of the current Amateur Extra exam question
pool was previously in the Advanced exam question pool. But the same
argument does NOT apply in upgrading Technicians to General. If the
General exam were that unnecessary, then why wasn't it merged in the

restructuring of 2000, and why won't it be eliminated in the ARRL proposal? I highly doubt that anyone staunchly favors free upgrades from Technician to General. I think this part of the ARRL proposal is simply the result of insisting on both a 3-class system AND a new Novice class. In my opinion, either current Novices should be merged into the Technician class (with Tech Plus privileges), OR there should be 4 license classes (Novice, Technician, General, Amateur Extra).
>

I still think that the Technician license is fine as an entry-level license and that the Technician exam isn't terribly hard - just an extended version of the old Novice exam. If a No-Code Novice license is created, it should NOT be at the expense of the Technician license. As I mentioned before, offering HF privileges to current Technicians doesn't require upgrading them to General - simply giving No-Code Technicians the Tech Plus privileges would accomplish this. Offering HF voice privileges (in addition to the slice of 10m) to current Technicians can be done by adding more voice privileges to the license. Automatic upgrades to General are not necessary and are unwarranted.

2657. Are RF safety questions too hard for the proposed new Novice exam?

Newsgroup: rec.radio.amateur.policy
Date: 2004-04-13 19:20:30 UTC
From: jason_hsu@my-deja.com
Message-ID: <f7d9a152.0404131120.48088479@posting.google.com>
Source record: 90721

Under the ARRL's proposal, current Novices will have certain privileges REDUCED. This opposes the sensible concept of avoiding automatic downgrades for any license class. The reason for stricter power limits is to avoid the need for RF safety questions in the new Novice exam.

What's wrong with testing prospective Novice licensees on RF safety? Are RF safety questions that hard? It seems like an extremely important topic to me, and learning about RF safety doesn't seem like an undue burden. Furthermore, RF safety is just one topic on the written exam and doesn't have the unilateral power that the Morse Code exams currently have. What's wrong with making the Novice question pool 10%-20% larger given how critical this topic is and given the need to avoid downgrading privileges of current licensees?

Admittedly, there are very few active Novices at any given moment, as these few active ones upgrade. But the same restructuring principles (like no downgrades) for the higher license classes should still apply.

Jason, I really think that an awful lot of hams that think we need a lot more hams on the air also don't think that people are very smart in general.

Element one was the pariah for so many years; it was keeping new hams out. And now somehow the easy test people "know" that the Technician license is too difficult!?

Agreed. I do not believe that kids are stupid and need an "easy"
license, especially if we *don't* really know that the technician
license is keeping them off the air.

I would hope that the people that want rf safety diminished on the entry level tests would step up and assume responsibility for any person that injures themselves even at the lower levels they want to grant them. "Yes Virginia, it is possible to do terrible damage to yourself with 100 watts!"

We have an accepted level of safety instruction and testing established. It has been around for a few years, and appears to be working well enough. The problem as I see it is that if we reduce this in any way, then we are inviting controversy if people start harming themselves with our dangerous if misused toys.

In a world where people can successfully sue because they did not know coffee was hot, or that a bike manufacturer did not tell the rider that if if becomes dark, they should turn on their headlights, people should be very careful about removing safety requirements.

This is especially important when the purported aim of the requirement reduction is to introduce more children into the radio environment. As a person that had to have multiple millions of liability insurance on myself in my dealings with children and their parents, I can say that with some authority. It's a scary path to go down.

Given the way that people come into the hobby these days, when the potential ham does not have the experience with high voltages that many

of us had in the past, and given our propensity to engage in litigation, and that some of us are trying to get children involved in the hobby, I support *more* safety related questions on the test, to include High Voltage as well as R-F issues.

Hey, Corporate America! Show Taxpayers Some Appreciation!
By Ralph Nader

If you work for a corporation, ask your own employer to support Taxpayer Appreciation Day. (We've included contact information at the end of the article.)

Take Action Now! April 15 is just around the corner. Please let us know what action you've taken and what type of response you receive at taxday@votenader.org

I'm going to go out on a limb here and suggest that April 15th of each year be designated Taxpayer Appreciation Day, a day when corporations receiving taxpayer subsidies, bailouts, and other forms of corporate welfare can express their thanks to the citizens who provide them.

Though it may not be evident, quite a few industries -- and the profits they generate -- can be traced back to taxpayer-financed programs whose fruits have been given away to (mostly) larger businesses.

Taxpayer dollars have often funded discoveries made by NASA, the Department of Defense, and the National Institutes of Health and other federal agencies. In many instances the rights to those discoveries were later given away to companies that brag about them as though they were the fruits of their own investments. Taxpayer dollars have played a major role in the growth of the aviation and aerospace, biotechnology, pharmaceutical, and telecommunications industries -- to name only a few.

Though corporate America insists it must file yearly income taxes just like everyone else, it is responsible for a sharply decreasing portion of federal tax dollars -- despite record profits. Despite record profits, corporate tax contributions to the federal budget have been steadily declining for fifty years and now stand at a mere 7.4% of the federal government income because of the loopholes they driven into our tax laws. The average citizen pays more than four to five times that in federal income tax revenues (with the single exception of payroll taxes).

Clearly corporations that believe they are self-reliant are often, in fact, dependent on taxpayer funds to maintain their financial viability. The least they could do is thank us. Which is why we need something like Taxpayer Appreciation Day. Consider the following:

General Electric bought RCA (which owned NBC) in the mid-1980s with funds it was able to save by using an outrageous tax loophole passed by

Congress in 1981. That loophole allowed GE to pay no federal taxes on three years of profits, totaling more than $6 billion dollars. It also gave them a $125 million refund! That gave GE the money to buy RCA. GE should arrange a media extravaganzas on NBC to say "Thank you, taxpayers.&#65533; Pharmaceutical companies constantly ballyhoo their discoveries in advertisements. What they don't tell us is that many of the important nonredundant therapeutic drugs -- including most anticancer drugs -- were developed, in whole or in part, with taxpayer money and then given to them by the NIH and the Defense Department. Bristol-Meyers Squibb, for example, controls the rights to Taxol, an anticancer drug developed all the way through human clinical trials at the National Institutes of Health with $31 million of taxpayer moneys.

Pharmaceutical companies spend billions on advertisements each year. Perhaps they should consider a big "Thank You, Taxpayers" ad campaign every April 15, if only to remind them where their drug research and development subsidies come from.

Mining companies often receive vast sweetheart deals from taxpayers. Under the 1872 Mining Act hard rock mining companies are allowed to purchase mining rights to public land for only $5 an acre, no matter how valuable the minerals on (or in) that land might be. A Canadian company recently mined $9 billion in gold on federal land in Nevada after using the Mining Act to purchase the mining rights to it for about $30,000. Mining companies owe the taxpayers their gratitude.

Television broadcasters were given free license to use public airwaves (worth around $70 billion) by a supine Congress in 1997. They too should thank us. What about all those professional sports corporations that play and profit in taxpayer-funded stadiums and arenas? The owners and players should thank the fans/taxpayers who -- in spite of their largess -- still must pay through the nose for tickets. For years McDonalds received taxpayer subsidies to promote its products overseas as part of a foreign market access program. Now McDonalds is a ubiquitous brand name worldwide, but has it ever thanked the taxpayers who underwrote its efforts? Then there are the HMOs, hospitals, and defense contractors that have had their legal fees reimbursed by the taxpayers when our government prosecutes them for fraud or cost overruns. Those companies have great public relations firms that can help them show us their gratitude. Corporate America has taken too much from us for too long. It's time it shows us a little bit of appreciation.

Communist Party (RCP), through such luminaries as C. Clark
Kissinger and Mary Lou Greenberg, both of whom are Directors of NION and
members of the Revolutionary Communist Party (RCP). Clark Kissinger,
co-director of NION and the RCP, was quoted as saying that when the RCP took
over, "it would be necessary to shoot everyone who didn't agree with them."

The RCP is a Marxist-Leninist-Maoist group that practices Lenin's "vanguard"
philosophy, which states that a vanguard of intellectuals is needed to lead
the proletariat in establishing a worker's utopia. It fosters the worldwide
revolution through its membership in the Revolutionary International
Movement (RIM). It is through this affiliation that the RCP is related to
two organizations listed by the State Department as terrorist organizations;
the Communist Party of Peru (Shining Path/Sender Luminoso) and the Kurdish

Workers Party (PKK) are are closely associated with RIM. (The PKK is no longer a formal member of RIM; however, it was one of RIM's founders. The Shining Path is still a member.) Other groups that comprise the Revolutionary Internationalist Movement are the Communist Party of Turkey/Marxist-Leninist, the Union of Iranian Communists (Sarbedaran)and the Nepal Communist Party.

The RIM via its publication A WORLD TO WIN declared its belief in the Palestinian intifada. The February 28, 2002, edition stated "the Revolutionary Internationalist Movement once again reaffirms its unwavering support .and calls on all revolutionary and progressive people to step up their actions on (the Palestinians') behalf." Another edition advised Palestinians to "link up with .the parties and organizations that make up the Revolutionary Internationalist Movement. With the weapon of Marxism-Leninism-Maoism and its military strategy, people's war, the Palestinian people's fight will surely become .more integral part of the world revolution, hastening the day when imperialism, Zionism .meet their doom."

Looks like the added 8 WPM (5+3=13) is equal to the old element 4B (the
written
test an Advanced would take to get Extra back in the olden days). Or to
put it
another way, that having passed a 13 WPM test long ago is equal to 1/2
of the Extra
written test (I'm ignoring medical waivers here). An Advanced took what
is roughly
1/2 of the current Extra written (element 4). Now that the Extra only
needs 5WPM,
I suppose this equivalence is valid....

Way back when, Tech required Novice code and general written. The old
pre 87
tech plus. I was one. Took element 4 a few years ago and now I'm an
extra.

Back in the early 1970s there was actually a rule saying that you could not
hold a tech AND a novice license at the same time. That Tech's were
restricted above 50MHz, thus no HF operations even as a novice. Even though
you had done novice code. I don't know if that was a bureaucratic
screw-up or
if the FCC had a reason. Back then I wanted to get a tech (phone privs
on VHF
I wanted) so my father and I visited a guy who was the FCC field
engineer for the
NYC area. This guy thought the tech license was an evil anti-ham dead
end that
would cause me never to attain true ham-dom on HF... Anyway, we did the
novice
code test. He set his keyer for a Farnsworth style test, but I had
trained for
slow character code. Bombed it. There's more about this guy, but it's OT.

Most of the ARRL guys are old time HF hams who did the high speed code
thing.
They say code is easy because they found it easy for themselves and got
the higher
class licenses and rose to prominence at the ARRL (not that high speed code
is a necessary skill needed for running an organization, but they used
it as a political
tool to edge out lower level licensee candidates). So nobody who found
code to
be a PITA would be there to say that code is a PITA.....

The Tech exam is what, roughly equivalent to an honors level high school
physics
exam and history exam (I mention "history' as that requires memorizing
random
information, names and dates equivalent to frequency bands and such
rules). Not
the inner city non-honors public schools where if you can write your
name you
graduate)... The Extra exam might be roughly equivalent to an exam for
a 3 credit
college class.

Well, they're not *legal* and should not be there. And legal CB
operators are not supposed to
talk internationally.

If the new "Novice" or "Communicator" proposals get instituted, I will tell any beginning class that I teach that we are going to go all the way to General. It won't be worth my time to teach otherwise.

A very large part of the reason was that to get on 2m FM, which is your
"local watering hole" you have to be a Technician. So people took the Tech
route and then upgraded to Tech+ to get HF privileges if interested. Many
instructors actively recommended that route rather than going Novice and
then upgrading to Tech+.

This means that all the tests need to be harder as ordinary youths even below the teen age level regularly pass the Technician and General class exams. With a little extra elmering, some pass the Extra exam.

Not hardly. The Tech and General exams are no harder than the material that students are learning in junior high if they are going to even a halfway decent school. The Tech and General exams require nothing harder than adding, subtracting, multiplying and dividing. I certainly hope our junior high kids of average intelligence and standard class room training can handle these basic math functions. The Extra exam couldn't hold a candle to the exams that I had to take in college for a 3 credit course. Although covering material that is not a typical school subject, it's no harder than standard high school (non-honors physics).

Do you really believe that bringing in a new ham at the
proposed novice level isn't worth it?

My goal or objective would be to encourage
as many new people, especially kids, to get a novice license
and just see how it goes from there.

Cheers,
Bill K2UNK

Most 3 credit classes are harder, but I had a few that were
"give-aways". Maybe
I should say "as hard as an easier hour test taken early in a freshman
college class".

Mike, that is absolutely false as an argument of any substance.
Government has given temporary waivers in many areas and no one
has ever been able to say that after the door closed on a particular
waiver, they should be allowed a similar waiver afterwards.

> There will be a *powerful* argument that "The Tech elements were good
> enough for the majority of hams to become General, so why should I have

They can argue that until hell freezes over and it won't stand up in
any court. A one time "free pass" based on a legitamate FCC goal
of license and rules simplification is ample justification.

> And although there is really no test process needed at all to get on HF
> (witness CB'ers that run illegal power levels) I believe that we should
> foster technical knowledge qualifications for the ARS.

No argument there...BUT the process still needs a solution and the
hodgepodge of 6 licenses and 6 sets of rules today just isn't needed.
That is why both ARRL and NCVEC have proposed almost identical
3 license plans with the "free" upgrades.

> That is a pretty good assessment, Jason.

I have already disagreed and said so in a different email.
I would especially doubt the ARRL expects a non-approval from
the FCC. The ARRL has a long standing positive relationship
with most, if not all, those in the FCC that will be assessing the
petitions. If there's any doubt in ARRL's mind, it is (IMHO)
likly tied to doubt that any code test will remain as opposed to
even having only a 5wpm test for Extra.

Cheers,
Bill K2UNK

Maybe all those "ordinary" kids you see passing those tests are the
smart ones. Beavis
and Butthead probably never show up at a testing session, even if they
understood
what ham radio was about, and not confuse it with CB. And no wisecracks
that ham
radio is becoming like CB, okay?.....

> The ham spirit has now totally
> disapeared,

Sadly you are correct in some manner ......it is there but changed to something else and I wish I had the wisdom to describe what it is now. I think that the "magic" is gone with the advent of the computer and the everyday wiz-bang of modern technology. I am not lamenting this as this is progress ......it is just the way it is. It remains to be seen if ham radio as we have known it will be a recognizable in 20 to 30 years given the changes of the last 20. Again I am not tearing my rament and covering my head with ashes. It is up to us to pass on the positive traditions of our service. The question to ask yourself is how you have been a positive for the service ......not carping about things that have gone under the bridge years ago.

Having a callsign is not
> a proof of respectability. Take care !

Does the Pope serve mass on Easter Sunday ....do bears dump in the woods etc. Unfortunately some of the biggest jerks I have known in my life have had call letters .....

God Bless ....Tom Popovic KI3R Belle Vernon Pa.

I'm pretty sure that cross-border communications between Canada and
the US were illegal back in the 70s when I had a CB
license.....apparently, that restriction no longer exists.

In the US, Part 95 subpart D disallows International communications,
except between US and Canadian CB stations.

http://www.noard.com/citizensband.htm

On the Canadian side, RIC-18 mentions no specific restrictions on
International communications at all. There is a limitation on
communicating beyond the 'normal range' of the station (i.e. other
than by ground wave transmission only) which pretty much rules out
International comms except with anywhere but the US, geographically
speaking.

It is worthwhile to encourage them to become a ham yes and I will do so. But from the discussion of what is proposed to be on the "new novice" or communicator tests, a one evening two hour session will do to cover the material in more depth than they will need. I'm not going to set up a single session one hour class. It's too much hassle to get a room, books, etc for that. I would willingly tutor individuals at my home for that license for a few hours but will not run a class for it. I'd set up the class so the first week, we discuss that study guide which they will have been asked to read in advance. We will discuss any questions that they may have on it. The remaining class weeks would cover the material to go on to General.

I want to bring new hams into the hobby but I'm simply not going to spend my time teaching material that simple. Nothing against the people or even really against the material. I simply expect a better return on my

investment of time. I will not get that teaching material aimed at the elementary school level when I am teaching adults. To me the satisfaction comes in seeing their faces light up when we've conquered a difficult chapter.

Robert,

All I can add here is that any Ohm's law problems I've seen have perhaps two resistors in parallel with the combination in series with a third. That hardly compares with first year college material with a modest network of resistors (perhaps 12 or so) and a couple of different emf sources thrown in - and you solve for the current and direction in one of the resistors (first year, D.C. It gets worse, of course LOL).

Ah .... 1st year physics. Hmmm ... calculus was involved here. I don't ever recall anything of that magnatude in an amateur radio exam. I also doubt a 7 year old would likely pass such physics exams.

While I have no problem with the elimination of Morse code, nor have I a problem with an easy entry level license, I am rather perplexed with the continued insistance that the tests are too hard. I am also somewhat surprised at a free ride of either codeless techs or tech plusses being moved to general. The only techs which got the free ride were the techs from years ago who took the general theory. The only difference was the 5 words per minute vs the 13 words per minute of the general class license. When the code requirement was dropped to 5 words per minute, the old techs had already passed the entire exam for new general class licensees. Hmmmm ... come to think of it, they didn't get a 'free' ride - they passed the same elements as newly issued general class licenses.

Just my thoughts ...

If you read the problems in the question pool, they are no more difficult
than the word problems that students are required to learn to work in 6th
grade and down. They just substitute things like amps, watts, etc for
apples and pennies.

In one of my recent classes, I had an 8 year old boy of ordinary grades and ordinary intelligence take and pass the Technician. Sorry but the test does NOT need to be easier. He made it on the second try. This is no worse than many adults.

Sure no problem with them taking the Novice as they feel like it. It might even be beneficial as they will, as did we all, struggle a bit to get on the air. What could be more convenient than going to a class you are already enrolled in? I would stress the point that they can bring questions to class as it will benefit all the other students. As to enforcing attendance, we give our classes through the Parks and Recreation Department, etc. They charge for the use of the room. Thus the students have to pay a registration fee and that must be for the whole course that goes directly to the Parks and Recreation depart. So some will stay just because they have paid for the entire thing.

And cheaper than a GMRS license ;)

Just a side note - I was shopping at Sam's club yesterday and they had some small Motorola HTs. 5 watt output with a number of channels (it advertised that some of these channels were FRS channels). I read both sides of that bubble packed pair of radios (they were packaged as pairs, plus a recharger) and nowhere could I find the mention of the necessity of a license. At 5 watts and capability of a number of other channels, the user should (but, of course, won't) obtain a GMRS license. All they know is that FRS radios are often advertised as 1 or 2 miles range - and this one is advertised as a 5 mile range. More talk power. As long as some companies make money, I guess this is a very minor point.

And keep in mind that that upgrade isn't exactly "free". They have to take
the time and energy to find or get the necessary proof of license, find a
test session, show up at said test session, and process the paperwork.

The secret is in the site you visit. In one Yahoo group, there have been offers which are all legitimate (and the price is invariably very kind to the buyer). This is not unlike researching products. I spent time trying to determine if one particular product would work or not - it took some searching, but I found my answer (no, it does *not* work) on the web from the New England Medical Journal. I consider the New England Medical Journal an honest source of information (if, of course, that is the type of information I happen to be looking for).

Many sites are simply a number of sellers looking for buyers. Some are legitimate; others not. This is the same for the general population. There are athletes who are quite honest; others use steroids or corked bats. It is up to the buyer to sort out the information. Buyer beware. It has nothing to do with an amateur license, despite your anonymous troll suggesting otherwise.

If the tests are going to be geared to "an average sixth grader", and
one of the requirements is to sign a paper stating that you have read
part 97, exactly what is the class going to consist of? And since ther
is a good possibility that the General test is going to end up being at
the level of the Technician license.

I know I'm mixing proposals there, but the point is, maybe the new
novice or communicator should be easy enough that people *don't* have to
take any classes for it.

> My goal or objective would be to encourage

Bill, just the same as we (you) are on the verge of eliminating Element
one as the great barrier to the Amateur radio service, we can change the
entrance requirements.

And who needs to argue that in any court? We simply do it the same way
that you support upgrading Techs to Generals. The same way that we make
a new "communicator license, and have people sign affidavits that they
have read part 97

There you go, Dee! Not every one wants to be an elementary school teacher, and not everyone wants to teach adults very simple things. How long does it take people to learn how to sign a statement that they have read part 97? I question whether a class will be needed for the new licenses anyhow.

Len,

I doubt anyone can read 120 characters per *second*. The need for more and more speed is being pushed by the desire to send more visually 'appealing' information. What once was typed into a memo and posted on a bulletin board ("come celebrate Dave's 30 years with the company") in a couple of minutes has now evolved into a 30 minute or more procedure with the word processor and all the pretty graphics. It is then passed to the employees as a 100K file (maybe 500K if Dave's picture is included) via intranet within the company. This might be nice enough, but is unnecessary information. This gets much more interesting when someone passes along a virus alert - which gets forwarded and forwarded ... you get the idea ;) Heck, we used to get warnings over the company computer about forwarding such stuff.

Mostly, the great advances in communication have resulted in more visual information being passed. At times, porn is involved. I'm not suggesting that the higher speed is bad, it certainly isn't. I am suggesting that a lot of communication going on now might well be described as "bloatware".

Come to think of it, one is safer if you've set your reader to 'text only' for receive. I wonder why ... :)
(ps - it is also a good idea to send only plain text. If only plain text were sent, 1200 baud would be a darn good clip.)

The question POOL can be as large as the NCVEC QPC cares
to make it. There's no Commission rule on maxima, only on the
minima of 10 pool questions for each examination question.

>with 100 watts!"

The "RF Safety" questions came about with the political need
to show concern for OTHERS, not the licensees themselves.

That is one thing you CAN blame on cell phones...uneducated
paranoia about radiation...all the scare books about all sorts of
radiation, even from the big MHV power lines.

> We have an accepted level of safety instruction and testing
>established. It has been around for a few years, and appears to be
>working well enough. The problem as I see it is that if we reduce this
>in any way, then we are inviting controversy if people start harming

Folkses have been playing with lots higher-power stuff than in
bitty 1 KW hamplifiers for decades before 97.13 (c) 1 and
97.13 (c) 2 were in Part 97. [also 1.1307 (b) and 1.1310]

The +100 VDC in transformerless 5-tube AM radios is lethal
but there weren't any "rules" or even "safety statements" on
those for decades. The semiconductor era with its resulting
low supply voltages was well established before anyone made
noises about tube voltages being hazardous. Where were all
the "safety" questions in ham exams then?

You're going to have to redefine what you say about "RF
Safety" as applying to OTHERS in the immediate vicinity of
ham stations.

> In a world where people can successfully sue because they did not know
>coffee was hot, or that a bike manufacturer did not tell the rider that

That's a good thought, of course, but now you are confusing
possible litigation with operating high voltage equipment.

By the way, you are reading this just a couple feet from a 24 KV
potential if you use a CRT. Do you feel "safe?" :-)

Hardly.

NONE of the US amateur license examinations are any sort
of academic achievement diplomas or certifications. The FCC
was never chartered to be any academic organization.

Of course, if you want to believe in the fantasy that an extra
doing 20+ wpm morse is an "expert radio operator" in this
new millennium, that's your thing. Would have been fine in
the 1930s. Not now.

If you want to start an "electro magnet school," fine. It worked
for Gordon West.

2697. How to attract people to the Amateur Radio Service

Newsgroup: rec.radio.amateur.policy
Date: 2004-04-14 03:31:40 UTC
From: Mike Coslo <mcoslo@adelphia.net>
Message-ID: <Eq-dnVBestgBLeHdRVn-vg@adelphia.com>
Source record: 90761

I've been here a few years now, and listened to a lot that has been said and done.

I've come up with some ideas about how we might attract people to the ARS. What I think will work, and what won't work.

What won't work:

Bitch, Bitch, Bitch! There are a number of hams that have an amazing, big chip on their shoulders. Everything is going to be the downfall of Amateur radio. We eliminate Element one, and pretty soon we're all worshiping Satan and registered Democrats. Yeah, that's a way to attract new people! If your that unhappy, turn your license in and then you'll finally be satisfied. But it's kind of like Abe Lincon said "people are just about as happy as they make up their minds to be". Your anger is your addiction.

If we can only make it simple enough! Want to attract kids? Make the tests so simple that anyone can pass them. Well this worked well with the Citizens band didn't it? The world is full of examples of things that have been improved by making them really easy, isn't it? Want to see a kid get rid of a video game? Give him or her one that is real easy to beat. It will be traded in in no time. A game that is just difficult enough will keep 'em busy for a long time. If there is no intellectual investment in the hobby, then there is no intellectual investment in the hobby. A challenge is not a bad thing.

The Freakin' Sky is Fallin' Man! Get the wagons in a circle, and man the phasers! Mixed metaphors on purpose. If a prospective ham looks into the hobby, and they see a multitude of ARRL and others crying wolf, they just might decide they want to spend their time on an avocation that has a future. I'm glad I didn't see the "overwhelming band threats" when I was getting started. That there are threats, inadvertent and purposeful is not the issue. The stridency and panic factor is.

I am the Great TEchNoDwEEb!!!! I remember when I was a rank General, I almost gave up on ever putting together a station because I was pretty well convinced it was impossible. After all, Those dipoles suck they don't work DX and you have to have them up a hundred feet in the air the Verticals suck because they aren't efficient and you have to be crazy to put in a ground rod because radials are the only way to go and you have to dig up your whole yard to put in radials and if you don't have at least 120 of the darn things at a quarter wavelength the antenna won't work for a darn and you have to use coax because ladderline is sensitive to moisture and you'll lose all your power in the tuner and besides it's so old school but the coax sucks because you have to make an antenna for

the specific band but traps suck because they don't use all the wire in an antennas and who the heck ever thought you could put a stinkin' hf antenna on a car and ever hope to work anyone with it!!!!!!!!!!!!!!!!!!!!

Oh..... G5RV's suck and are great too!

Now what I think will work. I have to say think, because I haven't seen much of it lately.

Show a newbie that it is fun. Let them make a DX contact with you as a control op. If they are shy to talk, maybe that keyboard and PSK31 might be a catalyst!

Hmm, PSK31? Let them see that the ARS is involved with computers. Not just logging and antenna design programs, but they can work the world with 'em! Show them the multitude of modes available, but not everything. You want them to be able to discover some stuff by themselves. Give 'em a few links to good websites that have

Show them you're proud of being an amateur. Let them get a sense of the excitement of talking around the world on a few watts, or even the joy of putting out a big signal with that linear and the glowing tubes in it.

Maybe they have a competitive streak. Let them work in a contest if you can. One of the greatest things done for me as a neophyte was for the club I belong to to let me do a lot of operating in a contest or two when I was still a technician. It took me a while to realize that the control op was a lot better than me, and I was dragging the scoring down a bit, but I was hooked, and now am reasonably proficient as well as having gone for the higher level licenses. That is one reason why I am happy to spend the daytime operating at field day as the control op for the GOTA station. I want to repay the kindness.

But most importantly, they need you to let them know how much fun it is, and to not belabor them with the complaining that we so often fall into "Those darn people that want to eliminate the Morse code test will be the downfall of Amateur radio" is not something the prospective ham wants to hear, as well as " We're going to get rid of that stupid code test, and those old fuddy duddies are just going to have to live with it" isn't going to help either.

Be enthusiastic, friendly and do good work.

> suggesting otherwise.

I don't know about the "amateur radio spirit being dead" because of
poor selling practices. (see my post about "How to attract people to the
ARS - especially the "bitch Bitch Bitch" part) 8^)

There is a good cure for dishonest selling practices. Don't buy the
stuff! I either buy new, or directly from a person where I can see the
equipment, hold it in my hands, and talk to the owner. And it will
either be a good price, or I'll just go buy something new with a nice
warrantee

Lets face it, anyone that is willing to pay almost new prices for equipment that they never saw, from someone that they don't know, and with no guarantee is going to find trouble.

BTW, if enough people take my approach, we'll see that used equipment prices take a nice fast tumble!

I was referring to PACKET type of data. Internet material goes
through faster over a POTS with "attractiveness."

Generic packet transmission goes as "packets of data" along with
sync and system-housekeeping data. That slows down the data
rate in the long run. However, even at half the maximum possible,
data can go zinging through at 60 characters per second or 600
"words" per minute. If the packet stuff was interrupted badly and
required resends such that the maximum rate was dropped to ten
percent, the throughput would be 120 "words" per minute or about
equal to slow speech rate. Packet can sustain throughput as long
as the circuit holds up.

>Mostly, the great advances in communication have resulted in more visual
>information being passed. At times, porn is involved. I'm not suggesting
>that the higher speed is bad, it certainly isn't. I am suggesting that a
>lot of communication going on now might well be described as "bloatware".

In that case, newspapers with advertisements have been
"bloatware" for centuries.

One person's "bloat" is another person's gourmet delicacy.

The longest fiber-optic communications line is one that goes from
the UK, through the Med, under-around the Indian Ocean, around
Southeast Asia, and to Japan. Two 4 Gigabit per second optical
fibers, pumped at a light wavelength for amplification. No active
devices IN the cable for repeatering.

Think about it...4,000,000,000 bits per second. And that's not the
fastest comm carrier using fiber.

>Come to think of it, one is safer if you've set your reader to 'text only'
>for receive. I wonder why ... :)
>(ps - it is also a good idea to send only plain text. If only plain text
>were sent, 1200 baud would be a darn good clip.)

This dial-up POTS (Plain Old Telephone System) I connect on indicates a normal rate prompt of 49333 bps most of the time. Downloads and uploads go at about 1/10th that rate or roughly three times faster than 1200 bps data. I'm satisfied with that.

Not bad for a POTS that's only supposed to have a 3 KHz BW and some folks still saying "it can't possibly send data that fast!!!" But, it does anyway. :-)

Back a half-century ago, I was keeping SSB transmitters going that were handling two voice channels and 12 TTY circuits, all simultaneously in a 12 KHz bandwidth...and that was already two decades old in radio communications. Back then hams were bragging up a storm about how they could go "faster" than 20 words per minute. They still do, but the data rates have gone up far more. Manual "CW" maximum rate is still the same as it was a half century ago.

If you want to call anything faster than 40 wpm as "bloatware," fine. Your choice. You might also think about why a half million Teletype terminals were made and how all those tele-printer things displaced the old landline telegraphy operators long ago with all that 60 and 100 wpm "bloatware" text copy.

2700. Why are so many defending the proposed automatic upgrade from Tech to General?

Newsgroup: rec.radio.amateur.policy
Date: 2004-04-14 13:45:48 UTC
From: jason_hsu@my-deja.com
Message-ID: <f7d9a152.0404140545.1dfc06e0@posting.google.com>
Source record: 90764

Until the ARRL proposal came out, I had never heard anyone propose automatic upgrades of Technician licensees to the General class. Now that this proposal has come out, many people are defending this part of the proposal.

I realize this might sound radical, but I believe that the current licensing system, for the most part, is OK. The only change that I strongly believe should be made is eliminating the 5 wpm Morse Code exam for all license classes, including Amateur Extra. Until the ARRL proposal came out, the Morse Code exam was the main controversy. The proposed automatic upgrades from Tech to General have now stolen much of the spotlight.

I oppose the proposed automatic upgrade from Tech to General because it's too large in magnitude. The General exam material is relevant to operating as a General licensee and goes into greater depth than the material on the Technician exam. The proposed automatic upgrade from Advanced to Amateur Extra is modest in magnitude and can be justified by the fact that most of the current Amateur Extra question pool was covered by the old Advanced question pool. But the rationale for upgrading Advanced licensees to Amateur Extra does not apply to upgrading Technicians to General. (I realize that there are a few Technicians who passed the General exam, but the current system allows them to upgrade to General simply by showing that they earned their Technician license before a certain date in 1987.)

I realize that No-Code Technicians lack HF privileges, but simply eliminating the 5 wpm exam would upgrade No-Code Techs to Tech Plus and also make it easier to upgrade to General. Why not drop the 5 wpm requirement and then expand the Tech Plus privileges on HF? This would beef up Technician privileges even more without resorting to automatic upgrades to the General class. I'm not against free upgrades, but I believe they should be of modest magnitude.

I may be wrong in saying that the Technician exam is not too difficult for new licensees. I may be wrong in saying that no new Novice class is needed. If this is the case, then why not have a 4-class system instead of a 3-class system? Just split the Technician exam into separate Novice and Technician exams (which was the case before the restructuring of 2000) and offer a No-Code Novice license. Going to a 3-class system should involve eliminating the Novice class (with free upgrades to Technician), not the Technician class. The Technician class is too important to eliminate.

Believe it or not, I have not changed my views in light of the recent restructuring proposals. I strongly believe that the Morse Code exam requirement should be eliminated for all license classes, including Amateur Extra. (No, Larry, I have not joined your side of the issue.) However, I do not think that the Technician exam is too difficult. It seems to me that nobody was complaining about the difficulty of the Technician exam until the ARRL suggested this. The people who defend the proposed free upgrades from Technician to General are providing fodder for the Pro-Code-Testing people who insist that the Anti-Code-Testing people want to get rid of the written exams. I am one of the Anti-Code-Testing people, and I think the written exams are OK.

Novices are currently allowed to transmit up to 200W on 80m, 40m, 15m,
and 10m. Under the proposal, Novices would be restricted to 100W on
80m, 40m, and 15m and 50W on 10m. Also, Novices are currently allowed
to transmit on 1270-1295 MHz but would be banned from that band in the
proposal.

Don't you think it's unfair to current Novices to cut their privileges
just so that the new Novices won't have to be tested on RF safety?

| Until the ARRL proposal came out, I had never heard anyone propose
| automatic upgrades of Technician licensees to the General class. Now
| that this proposal has come out, many people are defending this part
| of the proposal.

People support the ARRL proposal because it gives about 65% of all
existing hams a coupon for a free pass to General or Extra. That
suggests that the proposal would gain 65% support right out of the box.
Even NCI has decided to support it, but then the vast majority of NCI
members are techs who would be eligible for the freebie.

That's certainly your call...but I think it is shortsighted.

> It's too much hassle to get a room, books,
> etc for that. I would willingly tutor individuals at my home for that
> license for a few hours but will not run a class for it.

Personally I'd be happy to teach a one evening class. I'd
even prefer that they get the Novice and get on the air for
a period of time before continuing on for the General... especially
if they are really newcomers to radio in general.

> I'd set up the
> class so the first week, we discuss that study guide which they will have
> been asked to read in advance. We will discuss any questions that they
may
> have on it. The remaining class weeks would cover the material to go on
to
> General.

Again, that's clearly your option to do as you want.

> I want to bring new hams into the hobby but I'm simply not going to spend
my
> time teaching material that simple.

Simple for you perhaps. When I was 13 I had literally NO knowledge
before becoming a Novice. Luckily my dad had a technical
background and had been a ham himself in the 1940s. There are,
I'm sure, many possible newcomers to ham radio whowould have
literally ZERO radio knowledge as a starting point. Frankly,
that can be a great advantage...no preconceived notion that
the individual aready knows it all.

> Nothing against the people or even
> really against the material. I simply expect a better return on my
> investment of time. I will not get that teaching material aimed at the
> elementary school level when I am teaching adults.

Why do you limit your teaching to adults...or only adults with
a pre-requisite knowledge of some radio basics?

> To me the satisfaction comes in seeing their faces
> light up when we've conquered a difficult chapter.

Why wouldn't you get the same enjoyment if the first chapter
was very basic radio concepts? For most people today, they don't
have any working knowledge of radio basics at all...especially
if they never took a high school or college physics course.

Cheers,

I'm sure there will be some that won't need any class and
will study or learn independent of any formal instruction. I did
exactly that myself as a teenager for Novice & General in the 50's.
On the other hand, I'd have no problem teaching a class targeted at
whatever the Novice syllabus of test material might actually end
up being.

> > My goal or objective would be to encourage

If you don't like teaching or working with some folks because
their initial knowledge base of radio is nonexistent then I'd
suggets you not even try as you have to be (IMHO) a
ready and willing instructor to any student group you might
encounter.

Actually there's no need at all to do that. All the FCC needs to
do is change the rules to reflect that all Techs licenses are now
General and they will be reissued as General as they individually
expire and are renewed. The same would be true for Advanced to
Extra, and, if the NCVEC petition wins out with the new entry
license being "Communicator" then existing Novice licenses
would be equivalent to Communicator and renewed as such when
the current license expired. There is NO immediate need for any
paperwork to happen at all.

Life's a bitch and then we die. Was it fair when new drivers no longer
had to take a drivers test on a manual gearshift auto? In any state today
you can take the driver's test on a car with automatic transmission
and then, having passed, go drive a car with a manual gearbox.

In many states, there have been waivers of penalties for people that
come forward to pay back taxes...and then, once the waiver period
is over, if someone else comes forward with a back taxes payment they
DO pay penalties.

If that's what you want, then you can file an RM asking the
FCC to consider it. Jim N2EY keeps saying the same thing
but admits it is just an argument and he'd never actually do so.

One benefit of a class of some sort is that it gets the local club
into view. ONe can make a stab at "controlling" the entry into
the hobby, which might not occur if someone reads about the hobby somewhere,
memorizes the test, and then is suddenly a ham with little connection
to it's history or any of the locals. Getting a ham license is
just a first step, and when someone is teaching a class they can
influence the newcomers in operating habits, infuse them with a sense
of the history of the hobby and even show excitement about CW. Plus,
there is (or should be) a level of interaction between the class members,
which should give them a start in the hobby.

I suspect this may be far more important than the learning that occurs
at the classes. I don't like the assumption that a class is the
only way to enter the hobby, but I like these side benefits.

When I was a kid, one had to be at least fifteen here in Canada
to get a license, so when I decided to get a ham license, it was
four years in the future. They changed the rule when I was twelve,
so I had over a year reading electronic hobby magazines and QST,
where I was learning without the goal being the getting of a license.

When the rules changed in late 1971 (well, the rule went into effect
some months later), I had to use the roundabout method of contacting
the ARRL to find a local code & theory class. And I entered that class
in February, at least half way into the course. It was the code

that I needed, and even coming in late I caught up. But it put me in contact with the local club.

That seems like a long time for a code & theory class, looking back. But of course, it was once a week for an hour or two. Obviously, while the goal was to pass the test, it was not about getting the test out of the way. A simpler test does not mean one has to merely teach the questions on the test.

> just so that the new Novices won't have to be tested on RF safety?

The number of Novices thatactually are on the air with rigs that
are over 100w but under 200 is probably miniscule. The issue,
if any, is more likly the 10m 50w limitation. I think that's
all but totally unenforceable.

The number of Novices that operate 1270-1295 MHz
is probably ZERO.

I see NO downside to the newly proposed Novice privileges,
especially since there are only about 32,000 current Novice
license holders now (less than 5% of all USA hams)
...and that number is constantly going down.

Cheers,
Bill K2UNK

Not all the tests...the ARRL and NCVEC are ONLY proposing
a new entry level. No changes are proposed for testing for General
or Extra.

> Well this worked well with
> the Citizens band didn't it?

Bad analogy...there never was any license testing at all for CB.

There's no reason the intellectual investment can't be for
General and Extra. Hell, that's what many of us did when we
started with the old Novice.

Where did you read that No-Code International supports the ARRL
proposal? NCI already submitted a petition, and this petition only
advocated the elimination of the Morse Code test requirement. NCI's
mission is to eliminate this requirement all around the world. It
would not be appropriate for NCI to advocate automatically upgrading
Technicians to General.

It could be construed as a "natural progression." After all, when you get
right down to it, it's actually about a reduction of effort...the degree of
which is subjective.

| Technicians to General.

Here is an excerpt from a message sent to NCI members:

"Almost two months ago we asked for your input on
the major aspects of the ARRL petition (RM-10867)
for amateur license restructuring. You are one of
the 800+ members who participated in the survey.
We thank you for your valued input! The response
was overwhelming as to desiring NCI to support
all the points in the ARRL petition, except, of
course, any continued code testing."

As I read it, that means that NCI is on record as supporting...

... the ARRL proposal for a new Novice license.

... the ARRL proposal to immediately upgrade all Technicians to General

... the ARRL proposal to immediately upgrade all Advanceds to Extra

... the ARRL proposal to end code testing for General

... the ARRL proposal for re-farming of the old Novice bands.

In other words, "Let the Great Giveaway Begin".

2715. Can anyone explain why Technicians should be upgraded to General?

Newsgroup: rec.radio.amateur.policy
Date: 2004-04-15 00:50:54 UTC
From: jason_hsu@my-deja.com
Message-ID: <f7d9a152.0404141650.5a942a7e@posting.google.com>
Source record: 90779

It seems that ever since the ARRL made its restructuring proposal, many of my fellow Anti-Code-Testers have jumped onto the ARRL restructuring bandwagon. The NCVEC submitted a new proposal that seemed to piggyback on the ARRL's proposal instead of sticking to the old proposal. What happened? I thought that eliminating the Morse Code testing requirement was the #1 most important thing in restructuring. Would there still be an alleged need to upgrade Technicians to General if the ARRL hadn't suggested this?

Is there any reason to support this idea other than the alleged needs to
1. Reduce the number of license classes to 3
2. Introduce a new entry-level license
3. Avoid downgrading privileges

I fully agree with #3, the need to avoid downgrading privileges. #1 and #2 individually sound reasonable. But insisting on meeting all three of these goals requires that Technician licensees be automatically upgraded to General. If it's that essential that there only be 3 license classes, then why not keep the Technician license and upgrade the current Novices to Technician? If a new entry-level license is necessary, then what's wrong with having 4 license classes instead of 3? What's wrong with compromising on #1 or #2?

Can anyone provide any other reason why Technicians should be upgraded to General? I realize that there are some Technicians from before a certain date in 1987 who passed the General exam, but I the restructuring of 2000 allows them to upgrade without taking a single exam. The current General exam question pool has always been much more advanced than the Technician exam question pool and is a great deal larger. Today's No-Code Technicians haven't had to study the General exam material, which goes into substantial depth on HF issues. The General exam has always been separate from the Technician exam. While most of the current Amateur Extra question pool was covered in the old Advanced question pool, you can't argue that most of the current General question pool was covered in the Technician question pool. Upgrading Advanced licensees to Amateur Extra in the interest of merging license classes sounds reasonable due to the similarity between the two classes. But upgrading Technician licensees to General is too extreme given the wide gulf in required knowledge. (I realize that there are Technicians with more know-how than some Amateur Extras, but these Technicians should have a big advantage on the General exam.)

I've heard some defenders of this upgrade argue that No-Code Technicians should have HF privileges. But eliminating the Morse Code exam requirement would give the No-Code Technicians all Novice/Tech Plus privileges and also make it easier for them to upgrade to General. I realize that Novice/Tech Plus privileges on HF are extremely limited, but that can be resolved simply by expanding these privileges. These more modest measures would address the rationale for the automatic upgrades WITHOUT resorting to such extremes.

I advocate eliminating the Morse Code testing requirement because its unilateral authority makes no sense. But the written exams do make sense because they are relevant to operating. Not every question will be relevant to everyone, but many will be. I don't believe the General exam poses an undue burden on No-Code Technicians. The questions are all multiple-choice, the question pool is public information, and no one topic or question has the unilateral authority of the Morse Code testing requirement. The more experienced and knowledgeable Technicians won't have to expend much effort in studying in order to upgrade. The current written exams aren't perfect, but I can't think of a better system that wouldn't pose an undue burden on applicants, VEs, or the FCC.

I assume that you will also suggest that low band VHF television stations *also* reduce their power to 50 watts? They do not operate at the 100 or 1000 watt level, you know - and 56 to 60 MHz is channel two television in the US. 60 to 64 is channel 3 ....

Actually, this could prove hilarious. I think there is a channel 3 in Syracuse, NY, just 60 miles away or so ...
Oh, puleeeze do us that favor ;)

Similarly, it is not appropriate for FISTS to comment on anything
other than Morse Code. So why do they do it? Why aren't you
addressing this injustice?

Not necessarily Bill. I'm happy to work with rank newbies. And I do, with Field Day, and at things like Kids Day at the mall, where many if not most of the kids didn't even know amateur radio existed before seeing us.

But don't connect not wanting to "teach" extremely elementary things to people that are capable of so much more with inability or lack of desire to teach. Some people want to teach college level courses, some at high

school level, and some, such as my instructor in a wheel class I'm taking, teach autistic children to work with pottery. I'm in awe of what she does, but there is no way I would do it.

As I say, I'm happy to provide a good introduction to amateur radio (fun, not too dweeby ,or overly technical, but as interesting as I can) to people that may only be awakening to technology, but I'm not interested in teaching them where to sign on the form where they say they have read part 97.

The problem I see with your analogy is that it's all one license, and
the requirement never comes back.

A closer analogy would be: At one time, a special test had to be taken
to drive a motorcycle. Then everyone would be given a motorcycle
endorsement, but after that, people would *again* have to take the
motorcycle test again to get the endorsement.

That is an interesting perspective, and I don't know if it was designed
that way, but it is a good thing to expose the newbies to the club study
atmosphere. As long as it is a good club, the beginner will get good
exposure. I took my Tech license without any club input, and thank
heavens I was able to get in a good club, then worked with the guys and

gals on proper procedure. Elmering is critical IMO!

In other words, you can take NCI's previous positions like all they want
to do is elimninate the code test, nothing else and chuck that, eh?
Who'd a thunk it?

Aren't you a member of NCI, Hans?

Hehehehehehe.

only the code test, only the code test, only the code
test.....................

If doesn't matter who gets on HF anyone and their class or lack of a license .

BPL is going to wipe it all out in a short time and HF will be useless.

Then again BPL might be an easy hack for those so inclined.

Yes, I am a member of ARRL. But last time I checked, if you don't toe
the party line in NCI, you aren't allowed in NCI.

And that my friend, is no laughing matter.

ARRL appears to tolerate disagreement.

Hey, Corporate America! Show Taxpayers Some Appreciation!
By Ralph Nader

If you work for a corporation, ask your own employer to support Taxpayer Appreciation Day. (We?ve included contact information at the end of the article.)

Take Action Now! April 15 is just around the corner. Please let us know what action you?ve taken and what type of response you receive at taxday@votenader.org

I'm going to go out on a limb here and suggest that April 15th of each year be designated Taxpayer Appreciation Day, a day when corporations receiving taxpayer subsidies, bailouts, and other forms of corporate welfare can express their thanks to the citizens who provide them.

Though it may not be evident, quite a few industries -- and the profits they generate -- can be traced back to taxpayer-financed programs whose fruits have been given away to (mostly) larger businesses.

Taxpayer dollars have often funded discoveries made by NASA, the Department of Defense, and the National Institutes of Health and other federal agencies. In many instances the rights to those discoveries were later given away to companies that brag about them as though they were the fruits of their own investments. Taxpayer dollars have played a major role in the growth of the aviation and aerospace, biotechnology, pharmaceutical, and telecommunications industries -- to name only a few.

Though corporate America insists it must file yearly income taxes just like everyone else, it is responsible for a sharply decreasing portion of federal tax dollars -- despite record profits. Despite record profits, corporate tax contributions to the federal budget have been steadily declining for fifty years and now stand at a mere 7.4% of the federal government income because of the loopholes they driven into our tax laws. The average citizen pays more than four to five times that in federal income tax revenues (with the single exception of payroll taxes).

Clearly corporations that believe they are self-reliant are often, in fact, dependent on taxpayer funds to maintain their financial viability. The least they could do is thank us. Which is why we need something like Taxpayer Appreciation Day. Consider the following:

General Electric bought RCA (which owned NBC) in the mid-1980s with funds it was able to save by using an outrageous tax loophole passed by

Congress in 1981. That loophole allowed GE to pay no federal taxes on three years of profits, totaling more than $6 billion dollars. It also gave them a $125 million refund! That gave GE the money to buy RCA. GE should arrange a media extravaganzas on NBC to say "Thank you, taxpayers.? Pharmaceutical companies constantly ballyhoo their discoveries in advertisements. What they don't tell us is that many of the important nonredundant therapeutic drugs -- including most anticancer drugs -- were developed, in whole or in part, with taxpayer money and then given to them by the NIH and the Defense Department. Bristol-Meyers Squibb, for example, controls the rights to Taxol, an anticancer drug developed all the way through human clinical trials at the National Institutes of Health with $31 million of taxpayer moneys.

Pharmaceutical companies spend billions on advertisements each year. Perhaps they should consider a big "Thank You, Taxpayers" ad campaign every April 15, if only to remind them where their drug research and development subsidies come from.

Mining companies often receive vast sweetheart deals from taxpayers. Under the 1872 Mining Act hard rock mining companies are allowed to purchase mining rights to public land for only $5 an acre, no matter how valuable the minerals on (or in) that land might be. A Canadian company recently mined $9 billion in gold on federal land in Nevada after using the Mining Act to purchase the mining rights to it for about $30,000. Mining companies owe the taxpayers their gratitude.

Television broadcasters were given free license to use public airwaves (worth around $70 billion) by a supine Congress in 1997. They too should thank us. What about all those professional sports corporations that play and profit in taxpayer-funded stadiums and arenas? The owners and players should thank the fans/taxpayers who -- in spite of their largess -- still must pay through the nose for tickets. For years McDonalds received taxpayer subsidies to promote its products overseas as part of a foreign market access program. Now McDonalds is a ubiquitous brand name worldwide, but has it ever thanked the taxpayers who underwrote its efforts? Then there are the HMOs, hospitals, and defense contractors that have had their legal fees reimbursed by the taxpayers when our government prosecutes them for fraud or cost overruns. Those companies have great public relations firms that can help them show us their gratitude. Corporate America has taken too much from us for too long. It's time it shows us a little bit of appreciation.

So it has ALWAYS been a policy that NCI has supported reductions in the written elements? We've been told otherwise in here and elsewhere. Or is this something new, and they are broadening their horizons?

And *you* might be skirting article 4 part 2, perhaps?

Massive credibility problem here. Laugh as necessary!

Thank you for that fair and equitable objective viewpoint,
seasoned old sea salt.

What's the percentage of the ARRL membership that are Techs
compared to other classes? Remember that the no-code-test
Tech license is over a third of ALL amateur licensees in the US.

ARRL membership was down to 21% of all US ham licensees
in December. Down from July and that down from December a
year before.

See any connections there? :-)

What can I say? The ARRL wants to "put Novices in their place"
and be nice subservient little serfs to the mighty morsemen of the
membership...from the impression they've always shown me.

If there's nit-picking needed (I think not) then in the final Report &
Order that MAY be issued, FCC will pick up on all the fly specks
and separate it from the pepper. IF and only IF ARRL will rule as
the "final winner" after no less than 18 petitions in one year's time.

>Don't you think it's unfair to current Novices to cut their privileges
>just so that the new Novices won't have to be tested on RF safety?

Just WHICH "RF safety" thing are you thinking of?

If it's personal "RF safety" then it is a matter of whether an
individual wants to either suicide or achieve bodily harm...about
the same as whether or not they won't have accidents climbing
a tower or tree putting up that "DX-winning super antenna."

If it's about the OTHER PEOPLE'S EXPOSURE "RF safety,"
then I think it is a lot of hooey as a result of mass paranoia of
cell phones next to the head or the ugliness of MHV power
lines spoiling orderly farm land or fear of unspecified fearsome
RADIATION boogeythings. Okay, that's the LAW [97.13 in
case you haven't looked it up yet or haven't heard of Part 1].
Maybe the LAW is a good thing, maybe it's a lot of extraneous
nonsense that doesn't need Federal Regulations (!) in a form of

Witless Protection Program.

Back in Junior High basic electricity shop class in 1947 I and all classmates learned the "left-hand rule" (for right-handers) which said "keep the left hand in the pocket if you have no choice about turning the power off and working with the right hand...that keeps a circuit from going through your heart." Since we'd all had basic biology by then, that made a lot of sense. Later at Fort Monmouth Signal School in 1952 a radar basics instructor stuck a ball of steel wool on a bamboo pole in front of a live 1 MW search radar beam. The steel wool burned. Steel wool doesn't burn by itself. Class duly impressed, lesson learned in a few seconds. Wasn't any Federal Law on RF exposure then in any radio service.

Between 1953 and 1956 I worked IN an HF RF field of about 100 to 200 KW total RF energy, lived IN that field for five months, 24/7. At least 600 others did also in that time at that same station, not to mention all the civilian farmers living IN that same field. Given same conditions at different sites around the world, tens of thousands have been exposed to high levels of RF. Nobody got cooked, fried, or rare. Was no LAW on RF exposure then or in any radio service. Was so until the 1990s and the Big Radiation Paranoia time.

If there is so much "worry" over personal safety, do you think any public safety agency of any kind can arrest and prosecute a suicide? [go ahead, make my day...] Worry instead about using your mighty amateur knowledge in TEACHING others about electrical/RF safety, common sense in live circuits, etc.

If there is so much "worry" over Other People's RF safety, then I'd suggest you or anyone else get a prescription for a tranquilizer from your personal physician. That MD can't cure legislated paranoia but it will make you feel better. It also might give you and others some tranquility to look into more meaningful radio subjects and quit trying to separate legal fly specks from paranoia pepper.

Hey, Corporate America! Show Taxpayers Some Appreciation!
By Ralph Nader

If you work for a corporation, ask your own employer to support Taxpayer Appreciation Day. (We?ve included contact information at the end of the article.)

Take Action Now! April 15 is just around the corner. Please let us know what action you?ve taken and what type of response you receive at taxday@votenader.org

I'm going to go out on a limb here and suggest that April 15th of each year be designated Taxpayer Appreciation Day, a day when corporations receiving taxpayer subsidies, bailouts, and other forms of corporate welfare can express their thanks to the citizens who provide them.

Though it may not be evident, quite a few industries -- and the profits they generate -- can be traced back to taxpayer-financed programs whose fruits have been given away to (mostly) larger businesses.

Taxpayer dollars have often funded discoveries made by NASA, the Department of Defense, and the National Institutes of Health and other federal agencies. In many instances the rights to those discoveries were later given away to companies that brag about them as though they were the fruits of their own investments. Taxpayer dollars have played a major role in the growth of the aviation and aerospace, biotechnology, pharmaceutical, and telecommunications industries -- to name only a few.

Though corporate America insists it must file yearly income taxes just like everyone else, it is responsible for a sharply decreasing portion of federal tax dollars -- despite record profits. Despite record profits, corporate tax contributions to the federal budget have been steadily declining for fifty years and now stand at a mere 7.4% of the federal government income because of the loopholes they driven into our tax laws. The average citizen pays more than four to five times that in federal income tax revenues (with the single exception of payroll taxes).

Clearly corporations that believe they are self-reliant are often, in fact, dependent on taxpayer funds to maintain their financial viability. The least they could do is thank us. Which is why we need something like Taxpayer Appreciation Day. Consider the following:

General Electric bought RCA (which owned NBC) in the mid-1980s with funds it was able to save by using an outrageous tax loophole passed by Congress in 1981. That loophole allowed GE to pay no federal taxes on

three years of profits, totaling more than $6 billion dollars. It also gave them a $125 million refund! That gave GE the money to buy RCA. GE should arrange a media extravaganzas on NBC to say "Thank you, taxpayers.? Pharmaceutical companies constantly ballyhoo their discoveries in advertisements. What they don't tell us is that many of the important nonredundant therapeutic drugs -- including most anticancer drugs -- were developed, in whole or in part, with taxpayer money and then given to them by the NIH and the Defense Department. Bristol-Meyers Squibb, for example, controls the rights to Taxol, an anticancer drug developed all the way through human clinical trials at the National Institutes of Health with $31 million of taxpayer moneys.

Pharmaceutical companies spend billions on advertisements each year. Perhaps they should consider a big "Thank You, Taxpayers" ad campaign every April 15, if only to remind them where their drug research and development subsidies come from.

Mining companies often receive vast sweetheart deals from taxpayers. Under the 1872 Mining Act hard rock mining companies are allowed to purchase mining rights to public land for only $5 an acre, no matter how valuable the minerals on (or in) that land might be. A Canadian company recently mined $9 billion in gold on federal land in Nevada after using the Mining Act to purchase the mining rights to it for about $30,000. Mining companies owe the taxpayers their gratitude.

Television broadcasters were given free license to use public airwaves (worth around $70 billion) by a supine Congress in 1997. They too should thank us. What about all those professional sports corporations that play and profit in taxpayer-funded stadiums and arenas? The owners and players should thank the fans/taxpayers who -- in spite of their largess -- still must pay through the nose for tickets. For years McDonalds received taxpayer subsidies to promote its products overseas as part of a foreign market access program. Now McDonalds is a ubiquitous brand name worldwide, but has it ever thanked the taxpayers who underwrote its efforts? Then there are the HMOs, hospitals, and defense contractors that have had their legal fees reimbursed by the taxpayers when our government prosecutes them for fraud or cost overruns. Those companies have great public relations firms that can help them show us their gratitude. Corporate America has taken too much from us for too long. It's time it shows us a little bit of appreciation.

Whew! I can put my hands on some Zoloft if ya want it, Mike! =)

(Just kidding...!)

Personally, I don't care how hard we "recruit", I think Amateur Radio has always attracted a certain few types of personalities and always will...Just like some people like hang gliding, snow skiing, Scrabble, etc etc etc.

There will be the occassional "straggler" that picks up along the way, but consider how many different "incentives" to become Amateurs there have been yet the growth rate, other than in radio's early years, has rarely reached two digits.

I honestly believe that if we put a cupon in Popular Science offering an all-privileges license for $20.00 plus the cupon, we'd STILL not see any "marked" growth. Yes...there'd be an initial spurt...Just like all the other "incentives" over the last 80 years, but that would be it.

I think the only way to get an idea of what would get more folks into Amateur Radio would be to do a "survey" in PopSci, Popular Mechanics, Popular Communications, etc, and get a feel for what the REAL "John Q" thinks.

I think the ARRL's "Novice" idea is wasted time. QST itself has numerous stories of Grade School and Junior High students who routinely pass all three

levels of licensure, so all they are doing is adding to the administrative quagmire. Furthermore, if they'd take the hint from other Administrations and just get past the code issue, there'd be no need for it (Novice).

I'd certainly call them "forthright" and since they are usually
well-stated I'd call them "honest". "Reasoned" in this forum is more
subjective than objective in this forum (my own certainly included)

What I'd like to know is why is it that many, if not most, of the
allegedly post-secondary educated persons find it necessary to use the
profanity to try and effectively express themselves...?!?! Especially those
who go out of thier way to make everyone else aware of just how well educated
they alledgedly are...And DOUBLY especially those who find it "appropriate" to
comment on the "conduct" of others in this forum...?!?!?

We should know how to utilize a highly practical, effective, efficient, and
universal non-voice means of communication which doesn't require any
computerized hardware to encode/decode the messages, and makes the
best possible use of the least possible power. This mode is, of course,
Morse/CW. It should be learned at progressive levels of 5, 13, and 20 WPM
for an entry level, intermediate, and full-privilege licenses, respectively.

Those who disagree are dumbed-down whiners whose opinions are invalid.

Anyone who receives a license without having passed the 3-level Morse code
proficiency learning requirement is incapable of providing a true emergency
backup communications service to the public, and therefore is not of any
value to the ARS.

How hot is Excessively hot? Sounds almost like the law passage attempt a few years back to force homeowners to limit the hot water to a pretty low value - I don't recall, but it was like 110-120 degrees. This was to protect children IIRC. Of course the lowered temperatures make a great breeding ground for Legionellosis.

Another hobby of mine, Amateur Astronomy, is the same way. There are
people complaining that AA's are too old, that we need to get more
children interested in the hobby (disregarding the expense of a good
telescope that older folks have the discretionary funds for, and not too

many 8 year olds will be allowed out at night when the observing happens
to be good!)

Darn, I thought it would go the other way. The FCC would require all amateur stations to run a KW minimum so that no one could complain about interference from BPL due to weak ham signals. That would seem to be the only right solution.

BINGO!

Here's a bit of interesting trivia...

Have you ever taken the time to stroll through "QRZ's" bios? If you do,
I think you'll notice that certain "hobbies" and career paths keep turning up.

A very large number make reference to flying, some type of active outdoor
sports (usually camping or hiking), participatioon as volunteer FD or EMS, or
active or retired career in the Armed Forces.

THERE'S where we need to be "recruiting"...In "FLYING" , "Emergency
Medical Services", the various military papers (NAVY Times, ARMY Times, AF
Times), "Field and Stream", etc. Throw the occassional ad into "Boy's Life",
and the science related magazines I noted earlier and a few (such as your
Astronomy field) that I am sure others can come up with.

Hmmmmm???

Absolutely. We need to have a target audience. Right now, it seems like
there is a scattershot approach.

Its nice that there are some pretty ladies that are hams, and it's nice
that there are a few celebrities that are hams, but by and large, we are
the techie's.

I doubt L'il Kim or Brittany Spears or Justin Timberlake will ever be
hams, or (name your popular type person) will ever even think about it.

Well, that's just fine. Ham radio wasn't, isn't, and never will be
Kewl. And that's kewl by me. If those type people were involved in it, I
probably wouldn't be.

Bad analogy, a game vs. ham radio.

The FCC tests are a tiny fraction of what there is to learn out there.
The FCC could replace all the tests with a `check here to get your
license' form, and ham radio wouldn't be any easier, harder or less or
more interesting.

You make it sound like ham radio is all about the FCC test, and if
that's easy, ham radio is suddenly easy. Well, I disagree. The tests
are already easy -- it's all the other stuff to learn, the *useful*
stuff, that's interesting and challenging.

Really, all the tests do is keep the riff-raff out. (Which seems
very important to many people.) And I guess as far as <30 mHz goes,
I'm riff-raff. For now. :)

| Show a newbie that it is fun. Let them make a DX contact with you as a
| control op. If they are shy to talk, maybe that keyboard and PSK31 might
| be a catalyst!

I actually was able to decode several PSK31 discussions last night on
14.073. I was very pleased. I was beginning to think that the dipole
I set up in my garage was somehow wrong. :)

I've passed elements 2, 3 and 4 and am working on 1, but I'm still a
rank amateur and I know it. Still, I'm really bummed that I can't
transmit on anything under 50 mhz until I pass the CW test, even
though I'm not really that interested in doing CW.

(And passing element 1 isn't going to magically make me stop being a
rank amateur. But at least then I'll be able to transmit `down
there'.)

Actually, I am willing to bet they'd either whine about the
$20.00, demanding that it be halved, or they'd complain about how
cutting out the cupon aggrivated thier carpal tunnel, and they'd
subsequently sue under the American's with Disabilities Act to have
the cupon requirement waived.

Right you are, see below:

> MacDonalds was sued successfully because they were on notice that
> the coffee was excessively hot for its intended purpose and manner
> of use

That is based on opinion ONLY. True it apparently found
support in a jury of 12, but that doesn't make it right. Many
people want "steaming hot" food...including coffee. The fact
that the old lady was so stupid as to put the cup in her croch
tells me a lot about how dumb she was.

Let's change the brew from coffee to tea. Anyone with an
ounce of brains or experience knows tea is made with boiling
water poured into a cup with a teabag. NOTE - boiling water
is the norm. Had Miss Idiot had tea in the cup instead of
coffee would she not have sued? I suspect we know the
answer to that since personal responsibility seems to be
abondoned today.

> ...but did nothing to prevent such injuries, and they were found
> negligent in not reducing the temperature to where it would not
> cause second-degree burns on exposed skin, let alone in customers'
> mouths, the intended use.

So I ask...is it OK for a cup of tea to be served to a customer
at 212 degrees...boiling water? If you were at a friend's home and that
friend made you a cup of tea which you then spilled on yourself,
would you sue your friend because the water was poured
from a pot that had just been boiling?

> A beautiful textbook case of negligence.

In your opinion anyway. More a case of screw the corporation
and make a few bucks when the case should have been dismissed.
If the logic is that it was too hot, then what should the temperature
threshold be for any food (i.e. tea, coffee, french fries, etc.)?
Correct me if I'm wrong, but I notice there's no temperature
threshold so designated by any governmental entity I know of.

Sorry Phil, the public opinion is not a slam dunk in support of
your legal viewpoint on this.

Cheers,
Bill K2UNK

> addressing this injustice?

I agree. FISTS has a hard-line stance in favor of Morse Code testing.
The organization is supposed to be dedicated to OPERATING Morse Code,
not keeping the Morse Code requirement. The leaders should have
either started a new organization dedicated to defending Morse Code
requirements or simply filed petitions on behalf of themselves instead
of on behalf of FISTS.

> - Mike KB3EIA -

Good point Mike. In many houses (mine for example) there is NO
way to separately regulate the domestic hot water temperature from
the heating system's temperature because the heater is a dual funtion
unit whereby the domestic hot water is a coil inside the heating system
hot water unit... and in today's hot water heating units (mine is only
three years old), the water temp setting cuts off at the high end at
around 180 degrees F.

Frankly it really gets my goat about how everyone else has to have
their lives dictated by the blatent stupidity of a few.

Soapbox off :-) :-)

If that's true, then it's time to fire 99.999% of the 911 operators.
But yet, they manage to provide emergency communications daily w/o any
knowledge of Morse or Farnsworth code whatsoever.

So its probably not true.

Nice troll, Larry tRoll.

|
| I doubt L'il Kim or Brittany Spears or Justin Timberlake will ever be
| hams, or (name your popular type person) will ever even think about
it.
|
| Well, that's just fine. Ham radio wasn't, isn't, and never will be
| Kewl. And that's kewl by me. If those type people were involved in it,
I
| probably wouldn't be.
|

Why wouldn't you be? I don't personally know the three young people you mention and I'll concede that I haven't paid a great deal of attention to them, but my impression is that they are bright, intelligent, successful, "with it" sorts who have influence among a wide segment of the population, particularly young people. Seems that the involvement of "those type people" could be one way (obviously not the only way) to attract people to the Amateur Radio Service.

Personally I find myself in direct disagreement with "wasn't, isn't, and never will be Kewl". (Thanks to WB8IMY for some of his thoughts) In case you didn't know, belief in magic is a necessary requirement for all Amateur Radio operators. Of course, you won't see a question concerning magic or metaphysics on the test you take to obtain your license, but in your heart you will come to believe in that powerful, intangible force.

All of us in the hobby have felt its influence at one time or another. Some night when the band is dead as a doornail you'll be tuning aimlessly, not expecting to hear a single signal because NOTHING could be coming through at that hour. But then, rising out of the noise like a ghost, there will be a faint call from another stalwart explorer thousands of miles distant. You pounce, establish contact and both of you marvel at the fact that the conversation is taking place at all. A few minutes later, however, the signal vanishes as quickly as it came. Your rational mind will shrug it off as a quirk of propagation, but that little tingle in your gut will tell you otherwise.

Hey, that's Kewl!

If you could travel back in time 1000 years to 1004 AD, you'd probably be burned at the nearest stake for even suggesting that two human beings could communicate with each other over great distances without a physical connection. No doubt they would accuse you of dabbling in magic -- and they'd be right!

As Amateur Radio operators, we work feats of magic every day. Many of us have become jaded about our powers and we tend to dismiss them as commonplace. We hardly think twice when we use our equipment to sommon the elemental forces of the universe. But every so often we need to pause and remind ourselves of what we are really doing. We need to remember the essence of what drew us to our unusual avocation in the first place: the wonderful magic of wireless communications.

Hey, that's Kewl!

Those of us who play at RadioSport contesting regularly employ our station engineering and operating skills in weekend-long games of world-wide electronic splatball with tens of thousands of other participants aged from pre-teen to near 100.

Hey, that's Kewl!

I could go on and on.....

I kind of wish that McD's would have taken the tack of printing "do not try to hold the coffee in your crotch" on the coffee cups. simply printing "caution, contents may be hot will not absolve them of negligence for the people that do not know that they should not *sit on* the cup, or try to pour it on their children.

And don't forget that the taste of the coffee changes with the
temperature it is brewed at. Boiled coffee is a from that some people enjoy.

I wonder if McD's is negligent re the obesity lawsuits that a
group of lawyers are working on as we speak.

April 15, 2004: The FCC released a 100 page combined Amateur
Radio Order and Notice of Proposed Rulemaking which
included, among other things, the ARRL's proposed
2002 "refarming" of the so-called Novice/Tech
Plus frequencies (See Paragraph 11.) and the NCVEC proposed
additional voice privileges over that proposed by the League.

Twelve petitions are ruled on by the FCC in one of 4 ways:
(1) "Proposed" ...amateurs must comment on them by June 15.
(2) Granted the Petition,
(3) Granted in part and
(4) Denied.

None of the eighteen petitions generated as a
result of WRC-2003 (i.e. after July 2003) are included.

Word document version....see:

http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-04-79A1.doc

100 pages.

The document is also available in Text (.txt) and Adobe (.pdf)

Call for an Impeachment Inquiry of Bush and Cheney,
Get Congress to Take Action

Sign our online Petition and read below for more information:

http://www.votenader.org/get_involved/impeach.php

HEY DUDE WHERE'S MY BUDDY!!!???
COME BACK HOME MICHAEL!!!

Ok Michael, you've had your realpolitik fling with ex-General Wesley Clark. Your endorsed Presidential candidate in the Democratic Primaries has withdrawn. It is time for you to come home, to join your buddies and resume your only genuine role which is that of defiance and resistance. Compliance and assistance with the Democrats does not accord with your past, your character, your bold writings and, most memorably, your long corrosive assaults on the Party that betrayed the working classes and plunged our country into corporate globalization. Remember, Michael, you're the flinty man from Flint, Michigan. You've never forgotten your roots. The heady Hollywood, Manhattan scene with the celebrities and Academy Awards have never gotten to your head but rather have gotten into your deserving pockets. How we all recall your standing before one billion people in Los Angeles at the televised Academy Awards in 2003 and, breaking the customary cant of the awardees, throwing the gauntlet down to George W. Bush and his "fictitious" war mongering.

Now the War has become a quagmire, with both Republicans and Democrats complicit (check the votes in Congress). The Draft may be on the way. So what are you doing going on the Al Franken Show very nearly breaking down when Al Gore (he of the pro NAFTA/GATT, anti-worker, regime-change, Iraq-bombing, lethal sanctions on half a million children Administration) called and thought you were apologizing. You have nothing to apologize for, Michael. Gore has a lot to apologize for-blowing the election he won in Florida and the country as a whole and for blowing, with Bill Clinton, the many opportunities the rich-booming Nineties and the collapse of the Soviet Union gave this country to turn a peace dividend into a pro-worker, pro-environment, pro-consumer and anti-poverty resurgence.

Come back and join our Presidential campaign, Michael. Talk to those "Reagan Democrats"-those 35% of union members who still vote Republican and against their own interests-as only you can. Michael, if you go pumping for the Democratic Party this year, just what are you going to say to the unemployed steelworkers near Sparrows Point in Maryland? To the megathousands of laid off textile and furniture workers in North and

South Carolina? To the abandoned auto workers waiting and waiting near their empty factories that went to repressive countries? To the millions of blue-collar workers, who fought our wars, only to learn that the two parties won't fight for their company pensions and health insurance? Are you going to tell them how the Democratic Party pushed through the WTO, let their pensions erode or disappear, were too busy collecting checks from the corporate bosses to pay attention to the corporate crime wave that looted and drained trillions of dollars from millions of workers, their retirement and small investments? Will you tell them that the cowardly Democrats, who couldn't win the fewer elections they are now not losing without the labor vote, won't even mount a determined drive to repeal the notorious, union-blocking Taft Hartley Act?

How can you be free to be what you are, or to depress Bush's vote, to jolt into consciousness the moribund Democratic Party?

Hey Dude, join your real buddies! The ones you may be thinking about just don't fit either your message, your vision, or our website VoteNader.org.

Come back home Michael. The workers and the youth of America are looking for you.

Best regards,
Ralph Nader

P.S. Will you put this invitation on your website and see how your fans react to Michael Moore returning to the Nader 2004 presidential campaign? Patti Smith will reserve a big singing spot, for you, on the stage for the customary finale, PEOPLE HAVE THE POWER.

Wednesday April 14, 2004

Join the Call for an Impeachment Inquiry of Bush and Cheney
Help us Get Congress to Take Action

You can help the call for an impeachment inquiry of President Bush and Vice President Dick Cheney. Sign our online Petition.

http://www.votenader.org/get_involved/impeach.php

George W. Bush and Dick Cheney should be impeached for two reasons:

They led the United States into an illegal, unconstitutional war in Iraq.
They misled the Congress and the American people with five falsehoods that led to war.

All it takes is one Member of the House of Representatives to call for an Impeachment Inquiry to start the process to investigate the two grounds. If the House then votes by a simple majority for Articles of Impeachment, the Senate would then undertake a trial of the President and Vice President. They would only be convicted, and impeached, if two-thirds of the Senate agrees.

--
project. The
WILPF also issued a condemnation of Clinton's Cuba policy in 1998. Bernstein was also quoted as saying she believes Cuba is the paradigm of democracy.

IFCO does not limit its activity to pro-Castro factions, though. Its management maintains relationships with extremist Islamist groups as well. Walker travels frequently to Iraq, usually alongside Ramsey Clark. IFCO is a member of ANSWER Steering Committee.) Bernstein is a member of the American Muslim Council's campaign against the use of secret evidence. Clement met with Palestinians during a WILPF "solidarity" conference in May 2002. IFCO is also a fiscal sponsor of the National Coalition to Protect Political Freedom (NCPPF). The co-founder of NCPPF was the recently indicted terrorist financier Sami Al-Arian.

However, NION's links with Muslim terrorists are not just indirect, through IFCO. NION invited both Sami Al-Arian and Lynne Stewart to address their October 6, 2002 rally in Central Park. Stewart was indicted for passing messages on behalf of her terrorist client Sheikh Omar Abdul Rahman.

One of the members of NION's Advisory Board, Abdeen Jabara, is a member of the legal advisory board for the American Muslim Council. He is a past president of the Arab-American Ant-Discrimination Committee, a board member of William Kunstler's Center for Constitutional Rights, and a co-counsel with Lynne Stewart for Sheik Rahman, the terrorist convicted for the 1993 World Trade Center bombing.

The American Muslim Council is one of the current members of Al-Arian's NCPPF (the same group to which IFCO's Bernstein belongs). Leaders of the AMC have been quoted as praising Hamas and Hezbollah. Jabara's AMC advisory board colleagues include Fakhri Al-Barzinji. Al-Barzinji is involved in Mar-Jac Poultry, which was raided last year by the FBI

Al the above people make use of 2 way radios. So ham radio is a natural
path of progression for
them.

Well, maybe skateboarders might like to use hands free radios to
talk to each other while rolling down the street. Though they'd
probably use GMRS sets for that.

I really don't understand glue sniffing. Whenever I worked with such
glue, I'd get a headache if I got too much of the fumes. Can't
imagine wanting that.

Well, something is working to leep ham radio from being like the CB band
(yes, there are some instances like 14.313 and that repeater out in LA
but those
are fairly rare). May not be the tests, it could just be the existing hams
giving guidance and elmering the newbies as they first get on the air.
There's
more than enough of a "critical mass" out there on the ham bands to keep
this
happening. All of us new general and extra-lites have not trashed HF since
restructuring.

I did it, and I'm no good at "motor" skills like that. Be sure to be
ready for high
speed characters spaced at 5WPM (Farnsworth method). This is designed to
get you used to the "sound" of each character and not get you in the mode of
counting dits and dahs. Makes getting up to higher speeds easier if you so
choose.

Agreed that they are all a part of popular culture, and are widely
respected and emulated by a lot of youth.

L'il Kim was just indicted for lying to the FBI about her involvement
in a shootout outside a studio when a security cam showed her very much
involved in it. Ms Spears has a lot to do with many prepubescent girls
"sluttin it up" the past few years. They adore her and emulate her as
much as possible. And Justin was the other half of the Janet Jackson
"wardrobe malfunction during the Super bowl.

> I could go on and on.....

What you are talking about is what I find fascinating about Amateur
radio also. Electronics in general for that matter.

Just imagine, all this starts with rocks. Rocks contain things that do
things when they are hit with electricity. Might be conduct electricity,
conduct it in one direction only, or block it. Maybe the rock will make
electricity when you hit it or when the sun shines on it. Maybe it will
make electricity when you get it near a magnet. Maybe the rock is a
magnet. All kind of stuff that enables us to do great things. And it's
all in rocks.

But it isn't too likely that the Popsters are going to be too
interested in that. It isn't the way they think.

Popular culture is what it is, and if the purveyors of pop thought that
Amateur radio was something to be popular, they would say so. Then the
popsters will come running to the ARS in droves.

And you or me thinking it is cool doesn't make it kewl for them.

Lot's of stuff in there. Some of it pretty goofy, like a petition for color-coded paper for different license classes (Denied), lot's of administrivia, etc.

The piece which will probably have the widest day-to-day impact on how we operate is related to changes in band segments on HF. If adopted, here's what you'll see.

On 80M Novices and Tech+ will have CW privileges expanded 4-fold. Will have 200KHz at 3535 to 3725.

75M phone band will be extended downward to 3725. Extra, Advanced, and General lower phone boundary will shift to 3725, 3750, and 3775 respectively.

On 40M Novice and Tech+ will have CW privileges doubled. Will have 100KHz at 7025 to 7125.

40M phone band will extended downward to 7125. Generals will gain 50KHz of phone. Extra and Advanced will gain 25KHz.

On 15M Novice and Tech+ CW privileges expanded 75KHz. Will have 175KHz 21025 to 21200.

On 10M Novice and Tech+ CW privileges expanded 100KHz, giving them 28000 to 28300 for CW and 28300 to 28500 for Phone.

I think weather weenies are a potential market for ham radio.
Admittedly, I'm biased by the fact that storm spotting is what led me
to become a ham.

I guess that we can write off anyone on a diet, anyone concerned about
his/her blood cholesterol, and health/fitness gurus. :)

Odd NPRM to say the least. This is hardly an "overhaul" or a "major
"restructuring". Whatta yawner. It'll get nit-picked into oblivion
around here of course, snore, snore. The CB mob oughta eat it up
though, ham leanyers will start showing up on the truck stop shelves
ready to roll on 27 Mhz . .

How long doya 'spose they'll keep ducking the code test issue? Or . .
is their silence on the matter all we're going to hear from the FCC
about the code tests for some very long time to come?

That is because that is how the ARRL wants it to be!!
The yankee-blueblood-old-boys-club in Newington
has finally admitted that the stats for HF operators has
been on a steady decline since the mid-80's. All the new
op's have been getting on 2 Meters and 440 FM so they
can talk to their friends during morning and evening
drive time. They have no interest whatsoever, for the majority
of them, to "upgrade" to TRADITIONAL HF mode of
operation because the *mistique* and *unique* ability to
have in your private home a radio that you can talk to
the other side of the USA or into Europe. Not any longer!
Today a teenager with a Dell computer and a DSL connection
can conduct live chat and/or video with their friends across
town or across the country or across the world. And they
don't need any unsightly antennas, limited propagation or
other things to hinder them...plus it's also much cheaper
than ham radio. (besides...from a generational perspective,
what kid or teenager wants to converse with a bunch of
60+ something year-olds on HF radio?) Face it boys.
The REAL REASON this is being done is the ARRL
knows that within 10-15 years, most of the current
hams who use HF will be DEAD OF OLD AGE AND
OR IT'S COMPLICATIONS THEROF. Along with that
the subscription rate for QST (..and CQ Magazine also)
is steadly declining each year. Ham radio is on it's death

bed boys, the sooner you admit it, the better you'll feel. We have *nothing* to offer the current youthfull generation but a pile of obsolete technology which they not only have no interest whatsoever in, but look upon the same and it's current users as being both eccentric and wierd. As one 13 year old said to me at a ham radio demo last year: "What do I want with just a microphone and a speaker? I can video conference with my friends online at once and swap music from home". The next generation has spoken boys!

Ham Radio is OBSOLETE. That is the root cause of the problem issue. Ham radio will be DEAD in 20 years just like the automobile replaced the horsebuggy.

Italy hasn't yet. Nor has Spain or Sweden, but we know they will, it's just
a question of when. Most other Western European countries have axed the CW
test. As for the Eastern bloc, since when have they been a shining example
for anything?

We've recently seen NCI criticized for commenting on restructuring proposals not directly related to the Morse and Farnsworth Exam issue.

So I'd like to know who the FISTS members are on RRAP.

I'd like to ask them why their organization, a non-political organization of Morse Code -Use- advocates, has filed with the FCC?

Thank you, bb

My concerns are not the NCI has an official position. It is that we have been told that their *only* agenda was the elimination of the Morse code test.

In addition, some prominent members are on record that they would never support reduction in the written qualifications, and now they do.

If they were to have said "We are in favor of elimination of Element one and a reduction of qualifications for the licenses", I would have disagreed, but I can respect the position.

But if the story keeps getting changed, both on a personal and group level, I am a little disappointed, and future assertions from them will have credibility in proportion.

I doubt that they care what I think.

Amateur Radio Newslineï¿½ Report 1392 ï¿½ April 16, 2004

Amateur Radio Newsline report number 1392 with a release date of
Friday, April 16th, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. Iraqi hams put out a plea to keep ham radio
alive in that war torn nation and the ARRL asks the FCC to extend the
filing deadline on B-P-L. Find out the details on Amateur Radio
Newsline report number 1392 coming your way right now.

(Billboard Cart Here)

**

A PLEA FROM A WAR ZONE: PLEASE HELP HAM RADIO SURVIVE IN IRAQ

Even as the bloodshed continues, hams in Iraq are asking their
counterparts world-wide to keep Amateur Radio alive in the war torn
nation. Amateur Radio Newsline's Bruce Tennant, K6PZW has more:

--

A widely publicized e-mail from Laith Adhary, YI1SRA, in Baghdad asks
the worlds radio amateurs for support in keeping ham radio a part of
a new Iraq. This, as the June 30th date for handover of the
government to local authorities approaches.

Adhary is a member of the Iraqi Association for Radio Amateurs and
works at the University in Baghdad. He says that it is urgent that
Iraq establish a viable ham radio program in the country before the
shift of governing takes place. To accomplish this, Laith and Iraqi
Association for Radio Amateurs president Diya Sayah, YI1DZ are asking
hams around the globe to and their national societies to a letter of
support for the future of the hobby in Iraq.

Both men indicate that this is a time sensitive issue and request
support right away.

With thanks to Ian Abel, G3ZHI, for passing the information along,
I'm Bruce Tennant, K6PZW, reporting for the Amateur Radio
Newsline.

--

The best way to make sure your letter of support arrives is to send
it by E-mail We have two addresses. Sayah can be reached at
yi1dz@hotmail.com and Adhary is at laithtariq@yahoo.com. (G3ZHI)

**

THE BPL WAR: ARRL ASKS FOR FILING DEADLINE EXTENSION IN BPL NPRM

Back here in the United States, the ARRL has asked the FCC to extend the deadline for comments and reply comments by 45 days in the Broadband over Power Line Notice of Proposed Rule Making. Thats E-T Docket 04-37.

The ARRL filing says that it anticipates the National Telecommunications and Information Administration report on B-P-L to go public on or around April 16th. Also, that the current deadline would allow only a couple of weeks at best to evaluate the study's results and incorporate its findings into comments in the proceeding.

Although the FCC does not routinely grant such extensions, the ARRL says that it is important to allow time for the N-T-I-A to conclude its study at B-P-L field trial locations. Unless the extension is granted, the last day to file comments is May 3rd and reply comments is June 1st. (ARRL Bulletin)

**

THE BPL FIGHT: SWL'S VS. BROADBAND OVER POWERLINES

Short-wave listeners can complain to the FCC if a Broadband Over Powerline installation interferes with their reception, but there are some caveats. Amateur Radio Newsline's Gary Pearce, KN4AQ, has the
rest of the story:

--

Progress Energy has made a concerted effort to move BPL signals out of the ham bands in their trial areas near Raleigh, North Carolina. But the systems, which are governed by FCC Part 15 and are prohibited from interfering with licensed services, are still radiating signals across much of the rest of the short-wave spectrum. That's leading
short-wave listeners to ask if they have "standing" to complain to
the FCC, since they don't have licenses themselves.

The - General Council Chris Imlay W3KD says they do, if the BPL signals are interfering with international shortwave broadcasts from other countries, but not if they are trying to listen to domestic shortwave broadcasters. Replying to an e-mail inquiry, Imlay adds that "One does not have to be a licensee of a transmitter in order to
receive harmful interference."

ARRL Chief Executive Officer David Sumner K1ZZ noted that the US is a member of the International Telecommunications Union, whose Radio Regulations require member nations to protect HF communications from harmful interference.

RR 15.12 reads, "Administrations shall take all practicable and necessary steps to ensure that the operation of electrical apparatus or installations of any kind, including power and telecommunication distribution networks, do not cause harmful interference to a radiocommunication service operating in accordance with the provisions of these Regulations."

Reporting for Newsline, this is Gary Pearce KN4AQ, in Raleigh, North Carolina.

--

The bottom line: If you are trying to listen to Radio Netherlands and a Broadband Over Powerline installation covers the station up -- complain to the FCC. (KN4AQ, ARNewsline(tm))

**

HAM RADIO IN SPACE: EXPEDITION 9 HEADED TO THE ISS

The International Space Station's next set of ham radio residents will arrive this month. Expedition 9 Commander Gennady Padalka and Flight Engineer Mike Fincke are slated to launch to orbit from the Baikonur Cosmodrome in Kazakhstan on April 18. They will arrive at the I-S-S on April 21 to replace Expedition 8 explorers Mike Foale, KB5UAC, and Sasha Kaleri, U8MIR.

Padalka is a space flight veteran having spent 198 days aboard the Russian Mir space station in 1999. On the other hand, Expedition 9 is Fincke's first trip to space. Both are hams. Fincke holds the call sign KE5AIT and Padalka is RN3DT.

European Space Agency Astronaut Andrï¿½ Kuipers will also travel to the
Station with Fincke and Padalka and return to Earth with Expedition 8 about nine days later. Padalka and Fincke will then spend about six months on-orbit. Their tasks include maintaining ISS operations, continuing science operations, conducting two spacewalks and operating the ham radio station as time permits. Their tour of duty is scheduled to end in late October when the Expedition 10 crew rockets up to replace them. (ANS, ARISS, MAREX)

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the A-I-R Repeaters serving Flint Michigan.

(5 sec pause here)

**

RESCUE RADIO: PHONE TUNNEL FIRE BRINGS HAM RADIO CALLOUT

Raynet -- the United Kingdom's version of RACES -- was called on
as
March drew to a close. This, as fire rips through a tunnel carrying
telephone lines across a wide area. Jeramy Boot, G4NJH, is in
Nottingham, with more:

--

Raynet groups in Cheshire, Greater Manchester and Derbyshire were put on standby following a fire in a BT underground tunnel in central Manchester in the early hours of Monday the 29th of March. The fire disrupted more than 130,000 telephone lines in Lancashire, Merseyside, Derbyshire and further afield. Cheshire Police were concerned about the effects on communications, and via the Cheshire Emergency Planning Department requested the availability of Raynet operators to cover the affected area.

The Greater Manchester ambulance service lost landline and radio communications with their vehicles, but were able to use mobile phones as a means of contact. Other difficulties included a loss of 999 calls and disruption to the broadband data network. Large areas of the High Peak area of Derbyshire were without landlines or mobile phones.

Jeramy Boot, G4NJH.

--

The majority of Raynet members were dismissed by the evening of March 29th, but the Cheshire Group and County Controllers were on call through Wednesday afternoon the 31st. Thats when the emergency call in 999 service was finally restored to the worst-affected area of Cheshire. (GB2RS)

**

RESCUE RADIO: TV CHANNEL 16 GOES TO PUBLIC SAFETY AGENCIES IN NYC

On this side of the Atlantic pond the FCC has permanently reallocated 482 to 488 MHz in the New York City metropolitan area to the land-mobile service. This, for public safety communications.

482 to 488 MHz which is also known as UHF television Channel 16 has been used in New York for that purpose since 1995 when the FCC issued a Conditional Waiver of its rules to permit the initial operation.

The entire story is on-line at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-04-80A1.doc
(CGC)

**

RADIO RULES: BY-BY FORMS

And a change of forms at the FCC. Effective with Monday, May 3, the Wireless Telecommunications Bureau will dismiss any applications

filed on an FCC Form 605 issued earlier than December 2003.

Form 605, the Quick-Form Application for Authorization in the Ship, Aircraft, Amateur, Restricted and Commercial Operator, and General Mobile Radio Service, is the hard-copy version of the Amateur Service application. The FCC has been accepting both older and current Form 605 applications that included room for a Taxpayer Identification Number or a Social Security number. The FCC would then issue the applicant an FCC Registration Number or F-R-N without additional paperwork.

All amateur service applicants must have and use an F-R-N when filing an application such as Form 605 with the FCC. The change does not affect applicants filing on-line with the Universal Licensing System. (ARRL Bulletin)

**

ENFORCEMENT: NEVER UNDERESTIMATE THE VALUE OF CB RADIO

Turning to the enforcement arena, never underestimate the value of an 11 meter Class D C-B radio set in catching a bad guy. Even when the alleged perpetrator happens to be the C-B operator at the controls. Bill Pasternak, WA6ITF, has the details:

--

According to the CGC Communicator, complaints about interference from a citizens band radio led police to the home of one Vernando Malone of South Bend, Indiana. When they searched the premises they found more than $20,000 worth of Nextel cellular telephones and another $20,000 in Motorola phones. Also located was a computer that Malone allegedly used to activate the phones

Malone has now been charged with forgery and theft. This, in connection with what police claim was scheme to fraudulently order large numbers of cell phones, activate them with a home computer, and then sell them on the street at discounted prices.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in
Los
Angeles.

--

Stamp this one 10-4 good buddy. And if you want to read more, its on-line at http://tinyurl.com/ytb3z (CGC)

**

NAMES IN THE NEWS: W4RWG ELECTED PRES OF SERA

On a more positive note, Repeater Journal reports that Roger Gregory, W4WRG, has been elected as the new President of the giant South Eastern Repeater Association for 2004 through 2005. Gregory replaces

Don Williams, W4VT, who has served in the post for the past six years.

The South Eastern Repeater Association -- better known as SERA Incorporated -- is one of the nations largest repeater coordination umbrella organizations providing service to Georgia, Kentucky, Mississippi, the Carolina's, Tennessee, Virginia and West Virginia.
It also publishes the Repeater Journal magazine four times a year. (SERA)

**

CONFERENCE: THE DCC IN IOWA IN SEPTEMBER

The 2004 joint Tucson Amateur Packet Radio and ARRL Digital Communications Conference will be held September 10th to the 12th. The venue this year is the Airport Holiday Inn in Des Moines, Iowa. More on the conference is on-line at www.tapr.org/dcc/. (TAPR)

**

CELEBRATIONS: OARC AS K4H IN MAY

The Owensboro Amateur Radio Club in Western Kentucky will celebrate its 50th anniversary as an ARRL affiliated club. This, by using the special event call sign K4H. K4H will be valid for all club members to use both mobile and from their home station location from May 15th through the 31st.

By the way. Only two members of the Owensboro Amateur Radio Club are still is here from its formation. They are Max Douglas, W4VJV and Jim Rush, W4EWL. Both are were instructors at early Amateur Radio classes run by the club. Also, W4EWL has three "QST Cover Plaque" Awards over the years. (Via e-mail)

**
BREAK 2

This is ham radio news for today's radio amateur. From the United
States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

TECHNOLOGY: KNRC AM IN COLORADO TURNS OFF IBOC

A broadcaster has shut down its A-M stereo system to avoid interfering with listeners of another near-by station. KNRC A-M on 1150 kHz in Littleton, Colorado, turned off the I-B-O-C or High

Definition Radio encoding equipment in response to listener complaints of interference to the signal of KJJD, on 1170 kHz in the town of Windsor.

Rodger Tighe writing in the CGC Communicator calls this is a second adjacent channel situation. He reports that part of the decision to silence I-B-O-C was based on the thinking that interference to a small mom & pop station like KJJD was totally unwarranted since consumers have so few H-D radios in their hands at this time.

Tighe is the Chief Engineer of KNRC. He says that the I-B-O-C encoding equipment is still in the racks and the whole issue could be revisited at a later date. (CGC)

**

CONVENTIONS: THE NAB HAM RADIO RECEPTION IN LAS VEGAS NV. APRIL 21

A reminder that this week, on April 21st is the National Association of Broadcasters `Amateur Radio Reception'. This years `Ham Radio
Reception' will be hosted by Heil Sound, Limited and its well known
owners Bob, K9EID, and Sarah Heil. They would like to invite any and all amateur radio operators who will be in attendance at the NAB show to join them for this annual fun event.

Audio Only: Hear it at http://www.arnewsline.org
--

This years NAB Ham Radio Reception takes place Wednesday April 21st, from 6 to 9 P.M. local time. The venue is the Las Vegas Hilton Hotel, Ballrom B. Of coarse, thats in Las Vegas, Nevada. For more information please feel to contact Bob or Sarah at 618-257-3000 or by e-mail to bob@heilsound.com. The Heil's say that they hope to see
you there. (ARNewsline(tm))

WORLDBEAT - ALBANIA: FIRST DX COM JUNE 19-20

Turning to news from around the world. Datline Albania where that nations hams will hold their first DX convention this spring. The dates are June 19th and 20th in the city of Tirana.

The actual DX convention will begin Saturday afternoon, concluding with a gala dinner and Sunday morning program. Sightseeing tours of the region will be available on Sunday afternoon. More information will be posted on line at www.za1a.com in the near future. (OH2BH)

**

WORLDBEAT - JORDAN: UK HAMS PLAN VISIT

Robin Bellerby, GM3ZYE, is in the early stages of planning an amateur radio trip to Jordan. The excursion will take place either in May or September of 2005 and will be mainly - but not exclusively - for members of the United Kingdom's Royal Signals, Royal Naval, and Royal
Air Force Amateur Radio Societies. Between 20 and 60 people are expected to make the trip. (GB2RS)

**

RADIO RECORDS: 2413 KM on 70 CM

Congratulations to ZL1AOX and VK3EK for extending the Trans Tasman 70cm distance record. On the 3rd January the two made a path of 2,413 Kilometers using SSB. The previous record was set on January 13, 1998 when ZL2TPY and VK4ZSH conversed across 2402 kilometers on the 432 MHz band. (NZART)

**

DX

In D-X, JE3MAS is in Tanzania for one year and will operate as 5H3HK. QSL as directed on the air.

And the multi-operator T33C DXpedition to Banaba island started on schedule on the 4th of April. The island counts as OC-018 for the Islands on the Air awards program. (Various DX sources)

**

THAT FINAL ITEM: WORLD CLASS T-HUNTING - PART 1

And finally, a question. Have you tried ham radio's version of fox hunting? It's not hard and you might win yourself some medals. Newsline's Joe Moell K0OV has the story of the next Amateur Radio direction finding championships:

--

Most hams know that in Amateur Radio, the term "foxhunt" doesn't have anything to do with horses or hound dogs. Our foxes are radio transmitters and the object of the hunt is to find them with radio direction finding equipment. But what many hams don't know is that the equipment for hunting radio foxes can be very simple and inexpensive. For a two-meter foxhunt in the park on foot, you can do very well by augmenting your handi-talkie with a simple yagi antenna made out of a steel measuring tape and some PVC pipe from the hardware store. For closing in, build an offset-type RF attenuator for about 15 dollars worth of small parts. Plans are on the Web, so warm up your soldering iron. Then maybe you could be like Newsline's Young Ham of the Year Jay Thompson W6JAY, who has won a place on our country's team to the World ARDF Championships. You don't have to be

a super-athlete, just reasonably fit.

To see the USA's best on-foot foxhunters in action, to learn from them, and to try it for yourself, make plans to come to southern California this June. The Fourth USA ARDF Championships get under way on June 16th, with practice sessions, a big two-meter hunt, and another hunt on 80 meters. Come out the weekend before, and you can take part in an optional intensive training camp. It's all being put on by the Santa Barbara Amateur Radio Club and it's open to anyone at any foxhunting skill level, with or without a ham license. If you're a senior, don't worry about trying to compete with W6JAY. Equal medals will be awarded in five separate age category for OM's from under 18 to over 60. There are four similar age categories for the YLs.

For everything you need to know about the Championships, including schedules, registration forms and equipment ideas, point your Web browser to www.homingin.com. That's HomingIn, as one word, homingin.com. I hope to see you there. Next week, I'll tell you about a way to get the foxhunting fun going in your own home town. From southern California, this is Joe Moell Kay-Zero-Oscar-Victor for Amateur Radio Newsline.

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the nominating period for the 2004 Amateur Radio Newsline Young Ham of the Year Award is now on. This program is open to any FCC licensed young radio amateur age 18 or younger residing in the contiguous 48 states and who has made a significant contribution to the community, the nation or ham radio though the United States Amateur Radio Service.

More information and a downloadable on-line nominating form is at our website. That's in cyberspace at www.arnewsline.org. The cutoff
for
nominations this year is midnight on Tuesday, June 31st.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm
Jim
Damron, N8TMW, and I'm Randy Damron, N8XEA, saying 73 and we
thank
you for listening." Amateur Radio Newsline(tm) is Copyright 2004.

EXACTLY the point I was making, Robert!

So if we KNOW that people involved in these activitites are more likely to
be the ones to be interested or get involved, why not cocentrate our efforts
there?

Certain, by no means do I suggest that we NOT "recruit" in other media,
nor should we exclude anyone by omission, however if we KNOW that we are more
likely to draw from those groups aren't our efforts more wisely spent in those
venues?

Farnsworth Exam...?!?!

Ive done a Google Search and can't find any reference to this...Can you
provide a URL...?!?!

>So I'd like to know who the FISTS members are on RRAP.

3505 here.

>I'd like to ask them why their organization, a non-political
>organization of Morse Code -Use- advocates, has filed with the FCC?

Why not?

The FCC allows persons with no vested interest in various radio services
to post thier opinons relative to that service and to receive the same weight
as any other persons (or entities) comments as any other.

Certainly FISTS >>DOES<< have a vested interest in Amateur Radio issues as
(I believe...I do not know for sure...) all of FISTS members ARE licensed
Amateur Radio operators.

No?

>Thank you, bb

2794. Problems with vanityhq.com, N4MC & AE7Q - loons!

Newsgroup: rec.radio.amateur.policy
Date: 2004-04-17 19:56:33 UTC
From: will_210@hotmail.com
Message-ID: <b5d0bdbb.0404171156.364b312e@posting.google.com>
Source record: 90858
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

I've had a problem with vanityhq and AE7Q's fcc call sign lookup pages. And I'm not talking about the fact that they're both run by a couple of really odd sociopaths, which they are. I'm talking about the fact that they disagree on certain callsign predictions. Namely, if you file for a 1x3 whose suffix starts with an 'X', vanityhq will give you the all-clear and AE7Q's will tell you it's "reserved." Same with all 2x3s starting with 'WC', which used to be reserved for RACES but which aren't anymore.

So here's the scenario: you see these discrepancies and start reading the message boards on vanityhq to find an answer. You see how bizarre most of the people who post on it are, completely obsessed with call signs; it's like that's all they think about all day. So you post anonymously, hoping that these freaks will answer your question but not particularly wanting them to know who you are. Instead of helping they start digging into your files and fcc info to find out who you are. So you get a bit nervous and try to make them stop by posing as someone else and telling them they're being strange and just to answer the question. Then they write a program to figure out your IP and ban you from the message boards altogether, even though you'd just like to bring up a few problems with their database filtering routines.

So enjoy! But look out for the "vanity loons".. these guys should double up on their OCD meds!

Call for an Impeachment Inquiry of Bush and Cheney,
Get Congress to Take Action

Sign our online Petition and read below for more information:

http://www.votenader.org/get_involved/impeach.php

HEY DUDE WHERE'S MY BUDDY!!!???
COME BACK HOME MICHAEL!!!

Ok Michael, you've had your realpolitik fling with ex-General Wesley Clark. Your endorsed Presidential candidate in the Democratic Primaries has withdrawn. It is time for you to come home, to join your buddies and resume your only genuine role which is that of defiance and resistance. Compliance and assistance with the Democrats does not accord with your past, your character, your bold writings and, most memorably, your long corrosive assaults on the Party that betrayed the working classes and plunged our country into corporate globalization. Remember, Michael, you're the flinty man from Flint, Michigan. You've never forgotten your roots. The heady Hollywood, Manhattan scene with the celebrities and Academy Awards have never gotten to your head but rather have gotten into your deserving pockets. How we all recall your standing before one billion people in Los Angeles at the televised Academy Awards in 2003 and, breaking the customary cant of the awardees, throwing the gauntlet down to George W. Bush and his "fictitious" war mongering.

Now the War has become a quagmire, with both Republicans and Democrats complicit (check the votes in Congress). The Draft may be on the way. So what are you doing going on the Al Franken Show very nearly breaking down when Al Gore (he of the pro NAFTA/GATT, anti-worker, regime-change, Iraq-bombing, lethal sanctions on half a million children Administration) called and thought you were apologizing. You have nothing to apologize for, Michael. Gore has a lot to apologize for-blowing the election he won in Florida and the country as a whole and for blowing, with Bill Clinton, the many opportunities the rich-booming Nineties and the collapse of the Soviet Union gave this country to turn a peace dividend into a pro-worker, pro-environment, pro-consumer and anti-poverty resurgence.

Come back and join our Presidential campaign, Michael. Talk to those "Reagan Democrats"-those 35% of union members who still vote Republican and against their own interests-as only you can. Michael, if you go pumping for the Democratic Party this year, just what are you going to say to the unemployed steelworkers near Sparrows Point in Maryland? To

the megathousands of laid off textile and furniture workers in North and South Carolina? To the abandoned auto workers waiting and waiting near their empty factories that went to repressive countries? To the millions of blue-collar workers, who fought our wars, only to learn that the two parties won't fight for their company pensions and health insurance? Are you going to tell them how the Democratic Party pushed through the WTO, let their pensions erode or disappear, were too busy collecting checks from the corporate bosses to pay attention to the corporate crime wave that looted and drained trillions of dollars from millions of workers, their retirement and small investments? Will you tell them that the cowardly Democrats, who couldn't win the fewer elections they are now not losing without the labor vote, won't even mount a determined drive to repeal the notorious, union-blocking Taft Hartley Act?

How can you be free to be what you are, or to depress Bush's vote, to jolt into consciousness the moribund Democratic Party?

Hey Dude, join your real buddies! The ones you may be thinking about just don't fit either your message, your vision, or our website VoteNader.org.

Come back home Michael. The workers and the youth of America are looking for you.

Best regards,
Ralph Nader

P.S. Will you put this invitation on your website and see how your fans react to Michael Moore returning to the Nader 2004 presidential campaign? Patti Smith will reserve a big singing spot, for you, on the stage for the customary finale, PEOPLE HAVE THE POWER.

Wednesday April 14, 2004

Join the Call for an Impeachment Inquiry of Bush and Cheney
Help us Get Congress to Take Action

You can help the call for an impeachment inquiry of President Bush and Vice President Dick Cheney. Sign our online Petition.

http://www.votenader.org/get_involved/impeach.php

George W. Bush and Dick Cheney should be impeached for two reasons:

They led the United States into an illegal, unconstitutional war in Iraq.
They misled the Congress and the American people with five falsehoods that led to war.

All it takes is one Member of the House of Representatives to call for an Impeachment Inquiry to start the process to investigate the two grounds. If the House then votes by a simple majority for Articles of Impeachment, the Senate would then undertake a trial of the President and Vice President. They would only be convicted, and impeached, if two-thirds of the Senate agrees.

--

like the
Interreligious Foundation for Community Organization, Women's International League for Peace and Freedom and the Revolutionary Communist Party.

Not In Our Name: What is IFCO?

Not In Our Name (NION) requests donations on its website, yet on this site donors are asked to make checks payable to NION/IFCO. IFCO is the acronym for the Interreligious Foundation for Community Organization. NION states that the " Interreligous Foundation for Community Organization (IFCO). is our fiscal sponsor." Fiscal sponsorship by IFCO means Not In Our Name receives donations that are tax deductible because of IFCO's 501c(3) (charitable, federal tax-exempt) status. IFCO charges a fee for this service.

Why is NION not a 501c(3)?

Donations to NION/IFCO are then mailed to the Women's International League for Peace and Freedom (WILPF), which is located at 339 Lafayette Street in New York City. The address is the same as NION's. The intimate nature of a financial partnership shows how closely aligned these two organizations are. And that's scary, because the Women's International League for Peace and Freedom has been associated with Communist causes since its inception. Molly Klopot of the WILPF is a NION organizer. The WILPF is related to I

Source record: 90863

Please read Article II, Paragraph 2 of the NCI Bylaws at the
NCI website. This article, as currently written, has been
in the bylaws since they were originally drafted. (I should
know; I was the original drafter) It would appear to give
all the leeway necessary to comment on licenses and
bandplans proposed for licenses not requiring code testing.

Some of us on the NCI Board do have serious reservations
over the Tech to General upgrades. We agree that it is the
only logical choice if the FCC is hellbent on having only 3
classes of license, immediately. On the other hand, we
could keep the Tech, give them all Communicator HF
privileges, and truck on with four classes for the long
term. Or, we could set a 10 year upgrade deadline for
Techs, and then all would expire. (In the next 10 years,
Tech renewals would be for a less than 10 year term) It
remains to be seen how the FCC will propose new license
classes in the NPRM still to come that will deal with the
entire license class structure, and code requirements.

The Armenian judges gave this a 9.8 on the Olympic Troll-O-Meter, but they were over-ruled by the umpires in instant replay, who award it a 1.4.

The Armenian judges lodged a formal protest!

It was sufficiently trollish, of course, but way too obvious. It was poorly written, poorly executed, and was so incredibly lame as to lack the true drawing power of a really masterful troll.

Maybe as high as a 1.6 for the intense stupidity of the premise, but a 9.8? Never!

The Armenian judges tear their hair out, throw their balalaikas down in dismay, and perform the traditional Armenian Dismay Chant!

They demand a recount!

I think FISTS has a right to make proposals or comment on proposals to the
FCC re. the preservation of Morse code within AR. I happen to believe the
retention of Element 1 relates to said "preservation."

Thanks for taking the time to answer, Richard.

I did not realize that FCC was adamant about only having three classes immediately.

I don't doubt that many in NCI have reservations about the proposals either. FWIW, support of the new proposals at this point is probably a difficult thing for NCI, because the ARRL proposal still contains Morse for Extra, and the NCVEC proposal has some severe deficiencies that make it very scary.

Here is a test question:

Is elimination of Element 1 testing important enough that the NCVEC proposal is preferable to what we have now?

The prudent course would be "We support the elimination of the Morse code test in the ARRL plan, but are disappointed that they choose to retain the test for the Extra class exam".

Otherwise, people like me are going to (mistakenly in your view) just think that NCI supports Technician level testing for General level privileges.

You are so close to achieving your goal here in the US. Element one almost certainly goes away soon. Why taint your victory?

All these proposals need to stop for a while and what we as a ham community NEED to work on is:

1. Improving P.R. of the hobby.

2. Strengthening from within (continued training etc.)

3. Keeping existing hams active.

Ham Radio, although it has gone through many changes in the past 50+ years, it does not need to change any further than it is now, except the written testing needs to be a little more tougher, but that can be changed at the VE/VEC level and does not necessarily require alot on the FCC part.

Keep the requirements where they are now, and don't lessen it further. Work on making Ham Radio stronger from within.

The biggest thing that the ARRL needs to do right now, and would have positive "rippling effects" not only through ham radio but within the organization itself, is to work on getting that roughly 75% of hams as subscribers!

Not only would they have a ton more of money to "defend" (still remains to be proven as to exactly how they do that.....) amateur radio, but would allow for "benefits" as well, and of course allowing a slightly cheaper subscription cost. One thing that needs to be done, and might get more to sign up is to do something like this:

1st year membership= Free (but some limitation on benefits) (kinda like an assocaite membership as opposed to FULL membership

2nd year membership=Reduced cost

3rd year membership=Normal price

Another thing that could be done is to have some type of incentive program. If you "sponsor" or "sell" the idea of membership to new applicants, you get some type of kickback on your membership for each person like $1 or so per person that gets a new membership or re-joins after a certain minimum length of absence.

The FCC has not publicly expressed any "hellbent" intention. That notion is a construction of ARRL, which the NCI directors have unwisely chosen to support.

The immediate result will be free upgrade coupons for almost 2/3-rds of all current licensees.

The not-so-immediate result (read "unintended but entirely predictable consequence") will be the permanent loss of credibility in the qualification process for General and Extra ("If those 300,000 guys got General licenses based on passing the fall-off-a-log-easy entry-level Technician exam, then why do I have to take a harder test like all the 'real' Generals previously had to take? Oh, my dear, the unfairness of it all!") And please don't insult us by trotting out the anecdotal selective-memory jeremiad from W1RFI about how the Tech exam is every bit as hard as the General exam.

Anyone have what they think is the best antenna for a 2m, 70cm, 6m?
Price isn't an object in this case. I just want a choice of some
great antennas. I have a mag mount right now, but it's got a
Bayonet-style antenna, and not the screw-on.

(Pardon the lack of expertise, I'm a comparative new ham)

You can try asking in the alt.ham-radio.vhf-uhf news group. Also does it have to be one antenna? A 6m quarter wave is going to be at least 5 feet tall. That puts a lower limit on the size of any multiband antenna that inclues the 6m band. Some people have had good luck using two antennas. One for 70cm, and a 5/8 wave for 2m. The 5/8 wave 2m antenna will work on 6m, its close to a quarter wave lenght, if you don't mind the some what poor match you get.

Hi Dan.

I took the liberty of forwarding the message to
rec.radio.amateur.antenna. It is a better group for this subject.

Your question is a little broad. I'm not sure of the application, base
or mobile, or if you would like a multiband or what.

If you want a good general purpose antenna, there are multiband 2m/70cm
ones out there. Single band antennas work well also. I've made a ground
plane for the house, and the mobile antennas use the car body for the
ground plane, although I've heard some discussion to the contrary. A
number of people like J-pole antennas, I've just built one for 2 meters,
and am evaluating it now.

If you want more "gain", you might look into one of the multi-element
antennas. These are a good deal more expensive, and need a rotator, as
the gain in one direction is offset by a null in the opposite direction.

But so much depends on what you want to do. If repeater operations are
your main interest on the higher frequencies, then the ground
plane/jpole approach is better IMO, unless you are on a fringe area and
need the gain just to hit the repeater.

On six meters, there are a number of options, from dipole to the
multiple element antennas also. The same ideas apply.

Hope this helps, but if you like, you can give us a few more details.

If the goal is simplification of number of classes, then there would indeed be a need to do the upgrades enmass. Otherwise the closed classes could hang on for up to 10 years, which nearly negates the simplification process.

Because he didn't get serious about studying until after he failed it once.
It is not possible to make a test simple enough to always pass on the first
try without seriously compromising the test.

I did not note was his score was as the important point was that he passed.

"N2EY" <n2ey@aol.comSPAMNO> wrote

| How about this one:
|
| "Is it a good idea to have an class of license that does not allow
| homebrewing-from-scratch?"

Here comes Jim with another of his "Appliance Operator Class License" strawmen. Excuse me while I piss some flaming napalm on it. (ooopppsss, uh, I musta meant to say "void my bladder for the nursie")

While I can't remember the last "fully homebrew" shack I saw (probably KG6AIG back in the 60's, and even Luis had *some* commercial test equipment items lying about), it is extremely uncommon to find a shack where every item is commercial (or in it's original commercial state.) Homebrewing and modification to commercial designs is especially alive and well in the QRP, contesting, satelite, and microwave communities.

The QCAO (Quarter Century Appliance Operators club) and ASSOOBA (Amalgamated Simple Shacks On Our Belt Association) would love it, but this idea would put our service on an immediate slide into nothing more than another consumer orientated Family Radio Service, and the consequent abolishment of Amateur
Radio.

The *single* unique element which differentiates our service from all the other radio services is our authority to experiment, build, modify, and generally tinker around and operate equipment which is not type accepted. The "technical" aspect of our hobby comprises 3 of the 5 reasons (paragraph 97.1) for the existence of the ARS, and removal of this requirement for licensing would tear the heart and soul out of the hobby.

If even a single class of amateurs were to be licensed without any requirement for electronics knowledge, then it follows that type acceptance of amateur equipment would be a requirement for sale to those induhviduals. Used equipment, if sold to "no-Tech" amateurs would need to be recertified and "mod-free", and repairs could only be accomplished by FCC-approved service facilities. The cost of new equipment would rise to commercial-service price levels, because of type-acceptance issues, and most vendors would probably leave the market.

Code-Free, then Tech-Free .... what next, license free?

No problem, Hans.

You're the one with the two-face complex, not me. Cuss all you want. It only sets the stage for "What Can We Believe From Hans"...You express your angst about MY posting habits, yet you make liberal use of insults, profanity and snide insults to "express" yourself.

>Code-Free, then Tech-Free .... what next, license free?

Hey...YOU joined "NCI"...You helped to get us here. Now you're complaining...?!?!

> NCI # 4304 http://www.nocode.org/

Uh huh...that's what I thought.

Ah! Thanks a lot! Actually 2 Meters is really the ONLY one I'm wanting to be using. I have a new Icom T90A, and just want a nice car antenna for talking on 2 meters. It's an HT. I have an actual Icom V8000 rig, but that's for indoors. (Got a beautiful Diamond X-50 for that, and I get repeaters all over the place here in the sierra foothills. Though I have to get to work on my coax, which is damaged, but ... Got the new coax and connectors, and will be dealing with that after I move to Indianapolis.)

For now, I want to operate with a reasonable degree of effectiveness from inside my vehicle with my HT. It's a fine, fine HT. My biggest concern is 2 meters, and whether or not it comes with the coax I'll need to put on my car. Again, I am VERY new to this hobby, having only gone on the air a dozen times (since moving has taken all of my energies) and I want something to use in the car. I have a mag mount, but it has the bayonet style connector. I'll need an adapter, but I ALSO want to get a good antenna. My radio only puts out 5 watts max.

I wouldn't mind being able to test out some 6M, but 2M is most important for me. Thanks so much for your help and interest in helping.

On the other hand...

The fist has also represented skilled trade unions, unity and solidarity.

That it represents a "symbol of violence" is more or less true if you are presdisposed to looking for violence. Once sees what one wants, I suppose.

Its a continuum. All things are related, and all actions have more
consequences than expected. More's the pity, since something good could
be salvaged from the present situation without the Element 1 test. Now
it is mutating into something that can really damage the Amateur Radio
Service.

- Mike, KB3EIA -

sometimes the worst thing to do to people is to give them what they ask
for.

Nope .....a symbol of anatomy used to describe a good CW op as in he has a good fist .....which I have heard used repeatedly over the years ...I guess it is a lot simpler to say that than ..... that fellow can really coordinate the use of his thumb-middle and index finger and his forearm to send good signals ......na .....I guess it has degenerated into the pressing of a mike button to complain about one's health problems or making bizarre noises either on purpose or by some wildly compressed splattering signal to make up for poor operating skill Oh BTW don't forget my 10-10 number. But I guess that pounding brass is more violent than flapping one's jaw

Okay, now we have something to work with. I'm using a 5/8th wave antenna on my car. It works pretty well. I'd suggest one of those. The brand is MFJ. Some don't like them, but it has performed well for over 3 years now. It has a small bottom loading coil. If you can spare the height, a full length version should perform a bit better.

Most come with coax.

Then you have to deal with mounting. I use a mag mount, and can run the cable between the doors of my Cherokee and it looks good. If that doesn't work for you, you can possibly run the cable down the back and into the trunk, then back up.

You can also use a trunk lip mount and do the same.

If you are really brave, you can body mount the antenna, but that is quite a project.

I don't recommend glass mount antennas for 2 meters.

After mounting the antenna, get a bnc or sma adapter, according to your needs, give the swr a check, and there you go. The big thing to look out for on installations is to avoid crimping the coax between doors, trunk lid, etc. That can create a swore problem.

I used a HT in the car for quite a while. (FT-50) Worked just fine. You should be happy with it. With a decent antenna and 5 watts, it is impressive how well it works.

You want a mag-mount 5/8wave Larsen... it's a
nice 1/4wave on 6m, too. Get the Larsen mag
mount, too... your present mag-mount (probably
BNC, with a duck on it) is insufficient... BNC
connectors are not rated for outdoor exposure.
Just run the coax in the passenger side, via the
rear door's front edge, down the center post, and
under the rocker panel to the dash.

Greetings!

I have an ADI AT-200 and an AT-201 HT, but lost the instructions. Can anyone tell me how to program the PL tones?

Thanks much!
Max.

For those of you which requested it, below is a link to the Canadian
LF/MF/HF Utility Frequency Listing. There are some omissions so if
you come across one feel free to let me know.

http://www.telusplanet.net/~homac/CanadaFrequencyDatabase.txt

Below are links to the Canadian and US Radio Spectrum Charts:

http://www.telusplanet.net/~homac/CanadaRadioSpectrum.pdf
http://www.telusplanet.net/~homac/USRadioSpectrum.pdf

*** These links will be removed April 30, 2004 ***

Why do we even need 3? Why not simply TWO: Below 30Mhz and above 30Mhz, and people can hold both.

> 2. Introduce a new entry-level license

A new "entry-level" license: Why? The TECHNICIAN class, as it is now, IS the entry-level license. It doesn't matter that it was not originally meant to be; it has evolved into such. If the ARRL can't see that, then their leadership are truly idiots.

I disagree. However, if a license privilege is going to change, there should be a transitional period of two years where a person can do whatever is needed to upgrade to the appropriate class where the privilege will be retained (or expanded, if that class has more privilege), and for all those who do not upgrade, they get what they deserve by their inaction.

Two big problems:

1) Stop calling it "ham radio" as that is actually a derrogatory term. One origin of it is from 19th century telegraphy where POOR telegraph operators were called "hams." Only the truly ignorant really believe the story that it was from the initials of the operators of one of the more popular (east coast) stations.

2) Impose a requirement where one's weight (in pounds) may not exceed one's IQ. There are just too many fat people in the hobby, and one may think that it's called "ham radio" because all the people in it are PIGS (literally).

;-)

Hi all, I'm looking for a good reference manual, pdf file, or web site's that will assist me in converting used UHF gear to operate on 11 meters. I'm finding there is a substantial market for such gear and I'll need some references for various solid state and tube conversions.

Thanks in advance for any help.

Greetings all,

I am planning to move to the western suburbs of Minneapolis soon, and would like to know if there are any communities that I should specifically "look at" or "avoid" due to restrictions on ham radio antennas or other issues.

Even apart from ham radio issues, I prefer rural to urban, but commute time to the areas on the west side of downtown is an issue preventing me from being too far out. Mound is probably the western limit of what I am willing to consider.

Right now I am looking at Mound, Champlin, and Maple Grove. My realtor is generally helpful, but amateur radio is a mystery to her and I do not think she is used to getting such requests.

73,

Cathy (N5WVR)

I guess an Extra should be able to figure it out. I would say it would be a lot of work to put UHF FM gear on 11 meters AM/SSB. Too much work in fact. Now if he was going to use them on GMRS FM I would say go for it BUT it would still be illegal as they won't be FCC type accepted. Get caught selling these things, lose your Ham ticket.

Already gone in Switzerland, the UK, Germany, Belgium, the Netherlands, Norway, Papua Niugini, etc. Soon to go in France (awaiting a signature). It will go here too when the FCC eventually gets it's act together.

And you're right, you aren't supposed to use your fist, but I suppose their name does come from the 'good fist' expression.

We all have an agenda, I suppose. I happen to think it's just plain wrong to force phone ops to learn code. And yes, we were forced. I had to learn 20wpm to get on the DX end of the phone subbands, and don't tell me I 'chose' to do that, 'cos I didn't.

That doesn't make any sense. UHF gear is suited to the 400-600MHz
region. 11 meters is 27MHz. You would have to completely gut the
unit and replace all of the tuned circuits.

Besides, it is very ILLEGAL to run any non type accepted gear on the
11m CB band (unless the power is in the milliwatt region.. Even in
today's relaxed enforcement environment, running funny gear on 11m can
get your ham ticket pulled.

-Chuck Harris

OBTW, you are 18 days late for an april fools joke.

She should understand covenants. Have her look into that. Other than that, there can be township restrictions on antenna towers. Those usually don't prohibit them, but put limits on height. And you can often get allowances or exceptions.

Your requests are reasonable and to be expected. Other people make requests to find out if dogs are allowed in the neighborhood, etc, so the realtor needs to do their job. You are paying them a lot of money when you buy your house, so if they can't seem to find covenant and zoning laws, you might want to mention about finding a realtor that can.

Remember - Mr or Ms Realtor is NOT your friend.

Actually, it's a left hand rule regardless of which is your preferred hand,
because your heart is on your left side. (Some people's hearts are on the
right, but it's very rare).

I was taught to keep one hand in my pocket over 200V, and both hands in my
pockets over 1kV !!

No, you need plutonium to do this right, and that's becoming more and more
difficult to get these days.

The city of Plymouth should be on your list of candidates. We have a very ham-friendly antenna ordinance which I wrote. You can put up a 70-foot antenna support structure without any variance needed.

Regardless of which city you select, be aware that a particular developer or homeowners association may have restrictive covenants in the property deed. Your realtor should be able to uncover those on properties which interest you.

73, and welcome to Minnesota,

Don't worry, Alun. they are making up for the injustices forced upon
you and me by making sure that we are not forcing much of anything on
anybody soon.

People that only wanted to talk on their radios were being forced to
learn some stupid theory and other likewise irrelevant (to them)
material just to get the license.

The No-code people are getting what they asked for, although not
necessarily what they wanted.

We embark on an interesting social experiment in the Amateur radio service.

There used to be something called Class A citizens band, which was AM modulation... I think on 460 MHz. There were a bunch of tube transmitters built for that band, most notably the Vocaline, and some of those can be sort of tweaked to kind of run on 440 MHz if you don't really care much about stability. A lot of them used bend-until-it-works capacitor and inductor technology.

I do not think this is a currently usable band. Although if it WERE currently usable, Fair Radio has a bunch of UHF AM aircraft transceivers for the military air band, which they are practically giving away right now. Not type-accepted of course...

>IF NOT, WOW..... that is a task and a half. As others have stated,
>legality will be out the window. Lou

The 11M crowd has never been one for worrying about legality. Which is kind of a shame since there's clearly a need being met there.

I don't know anything about Minneapolis in particular (except for MSP, with which I am too well acquainted), but I recommend that you *insist* on getting information about any CC&Rs and/or Home Owners' Associations that pertain to the particular subdivision or lot in which you are interested.

We bought a house in W. Michigan last year in a 30-yr old subdivision with minimal CC&Rs (with no mention of antennas or transmitters), no HOA, and underground utilities. Although most municipalities around here exempt amateur radio towers/antennas up to 70ft from any zoning ordinances (and the township in which we bought does not even require a building permit for a tower to ensure that it is safe), all the newer properties we looked at had draconian CC&Rs specifically outlawing anything more than a small satellite dish mounted no more than a few feet above the roof. You *must* check out the CC&Rs before signing anything, as they typically "run with the land," are recorded at the local "Registry of Deeds" (or whatever), and are enforceable even if you have never seen them -- the CC&Rs for the property we bought were not even made available at the closing (and even if they had been, that would have been a little late to back out of the deal).

>Wouldn't that be illegal?

Hi OM,

Yes it would. It is against the law to sell Transmitters that are not
type-accepted for the band they are intended.

On the other hand, the Amateur radio service is the ONLY exception to
the rule. We CAN design, build, and operate non type-accepted gear.

On the third hand, the 11 Meter band is not Amateur radio service.
Even tho' we can work there, we must abide by all rules and
regulations for that service (all restrictions apply in spite of our
"privileges").

SB QST @ ARL $ARLB013
ARLB013 FCC okays RF identification tags at 433.5 to 434.5 MHz

ZCZC AG13
QST de W1AW
ARRL Bulletin 13 ARLB013
From ARRL Headquarters
Newington CT April 16, 2004
To all radio amateurs

SB QST ARL ARLB013
ARLB013 FCC okays RF identification tags at 433.5 to 434.5 MHz

The FCC has adopted a somewhat limited proposal to permit deployment of RF Identification (RFID) tags on the 70-cm band at much greater duty cycles than current Part 15 rules permit for such devices.

Among other applications, RFID tags are used to track shipments and packing containers. A Third Report and Order (R & O) in ET Docket 01-278--approved April 15 but not yet released--follows a 2000 petition by SAVI Technology to revise FCC Part 15 rules to accommodate such devices in the vicinity of 433 MHz. The ARRL has consistently opposed the proposal, but the FCC just as unfailingly has gone along with it. FCC Office of Engineering and Technology (OET) Chief Ed Thomas said RFIDs provide important public benefits.

"This device is designed to increase homeland security at ports, rail yards and warehouses," Thomas told the FCC open meeting. "It will foster the development of more powerful and advanced RFID systems that can identify the contents of shipping containers and determine whether tampering has occurred during shipment." Thomas said the devices also would increase efficiency in shipping operations and inventory control.

In requesting Commission adoption, OET's Hugh van Tuyl provided the broad strokes of the Part 15 rule changes, which, he said, would apply specifically to shipping containers "in commercial and industrial areas." In certain cases, he asserted, current Part 15 requirements aimed at preventing interference to licensed services "may unnecessarily constrain the operational range of RFID systems as well as the speed and quantity of data that can be transmitted."

The Third R & O would increase the maximum radiated field strength permitted for such devices as well as the maximum permissible duty cycle--from one second to one minute. The longer duty cycle would

allow an RFID to transmit the contents of an entire shipping container, van Tuyl said. "We therefore believe there will be no significant increase in the potential for interference to authorized services," he concluded.

The Third R & O reflects certain accommodations to the National Telecommunications and Information Administration (NTIA), which expressed "grave concerns" about the proposal in 2002. The R & O limits the operating band for such RFID tags to 433.5 to 434.5 MHz, instead of the 425 to 435 MHz SAVI originally asked for. It further prohibits operation of RFID tag systems within 40 km (about 25 miles) of five government radar sites. Manufacturers of 433 MHz RFID systems would have to register the locations of their system base stations to aid in interference resolution.

Since SAVI first approached the FCC in 2000, ARRL has maintained that the RFID tags the company proposed would represent a significant source of potential interference to sensitive receivers and be incompatible with ongoing requirements of incumbent services.

More than 130 amateurs filed comments in opposition to SAVI Technology's RFID tags proposal, and most supported the ARRL's position that the proposed rules were flawed and should not be adopted.

SB QST @ ARL $ARLB012
ARLB012 FCC proposes wide-ranging changes to Amateur Service rules

ZCZC AG12
QST de W1AW
ARRL Bulletin 12 ARLB012
From ARRL Headquarters
Newington CT April 16, 2004
To all radio amateurs

SB QST ARL ARLB012
ARLB012 FCC proposes wide-ranging changes to Amateur Service rules

The FCC has released an "omnibus" Notice of Proposed Rule Making (NPRM) that seeks comments on a wide range of proposed Amateur Service (Part 97) rule changes. The FCC also denied several petitions for rule making aimed at altering portions of the Amateur Radio regulatory landscape and ordered minor changes in Part 97. The NPRM is a result of a dozen petitions for rule making, all filed more than a year ago and some as long ago as 2001.

Comments on the proposals put forth in WT Docket 04-140 are due by Tuesday, June 15, with reply comments by Wednesday, June 30. Among other changes, the FCC has recommended adopting the ARRL's "Novice refarming" plan, which can be seen on the web at, http://www.arrl.org/announce/regulatory/refarm/.

"Because the ARRL petition addresses the operating privileges of all classes of licensees on these Amateur Service bands, we believe that the ARRL petition provides a basis for a comprehensive restructuring of operating privileges," the FCC said.

The ARRL referenced its Novice refarming proposal in its recent Petition for Rule Making, RM-10867, which, along with three other petitions remains open for comment until April 23.

The FCC also has proposed essentially eliminating its rules prohibiting manufacture or marketing of Amateur Radio Service power amplifiers capable of operating between 24 and 35 MHz. The current rules "impose unnecessary restrictions on manufacturers of Amateur Radio equipment and are inconsistent with the experimental nature of the Amateur Service," the FCC said.

The FCC proposed amending Section 97.201(b) of the rules to permit auxiliary operation on 2 meters above 144.5 MHz, with the exception of the satellite subband 145.8 to 146.0 MHz, in addition to frequency segments already authorized.

The FCC proposed extending the bands available for spread spectrum experimentation and use to include 222-225 MHz as well as 6 and 2 meters. Current rules limit SS emissions to frequencies above 420 MHz.

Among other things, the FCC also proposed to prohibit acceptance of more than one application per applicant per vanity call sign; permit retransmission of communications between a manned spacecraft and its associated Earth stations, including the International Space Station; allow current amateurs to designate a specific Amateur Radio club to acquire their call sign in memoriam; eliminate Section 97.509(a) of the rules, which requires a public announcement of volunteer examiner test locations and times; and add to Section 97.505(a) to provide Element 1 (5 WPM Morse) credit to any applicant holding a Technician license granted after February 14, 1991, and who can document having passed a telegraphy examination element.

The Commission ordered some changes in Part 97 without requesting comment. It ordered, among others, the revision of the definition of an "amateur operator" in Section 97.3(a)(1) to reflect that entry in the FCC Universal Licensing System (ULS), not a license document, determines whether a person is an Amateur Radio operator.

The FCC adopted a technical change to specify that the mean power of any spurious emission from a new amateur station transmitter or amplifier operating below 30 MHz be at least 43 dB below the mean power of the fundamental emission.

Among other petitions, the FCC turned down a proposal to establish distinct CW and phone segments in the 160-meter band. Also denied were petitions that would have imposed restrictions on the time, length or transmission frequencies of bulletins or informational transmissions directed at the amateur community and a request to add

to the special event call sign system certain call sign blocks designating territories and possessions that lack mailing addresses.

The FCC Notice of Proposed Rule Making, on the web at, http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-04-79A1.doc, in WT Docket 04-140, is available on the FCC Web site.

As soon as the document has been posted, comments on the NPRM may be filed via the FCC Electronic Comment Filing System at, http://www.fcc.gov/cgb/ecfs/. Click on "Submit a filing." To view filed comments, click on "Search for filed comments." In either case enter the NPRM number in the "Proceeding" field as "04-140" (without the quotation marks).

Quite right. Converting existing equipment to 11-meter use would
probably require individual certification of every unique piece or
type. Sure sounds expensive.

Issue 2: external power amplifiers are not allowed in the 11-meter
band... conversion of higher-powered UHF amps would not be legal.

Issue 3: equipment originally designed for UHF operation (1 meter and
shorter wavelengths) seems to me to be a less-than-wonderful choice
for conversion to 11-meter operation.

Issue 4: there's plenty of cheap 11-meter gear already on the market
(both legal-type-certificated, and outside-the-pale). Doesn't seem
like there'd be much of a [legal] market for converted UHF gear.

All in all, this idea sounds like a great way to lose lots of money,
and risk big fines and the loss of an amateur-radio license. As folks
may have noted, the FCC has recently raised their level of enforcement
against companies and individuals who have been playing loose-and-easy
with the rules about 11-meter operation and equipment sales.

The Armenian judges gave this a 9.8 on the Olympic Troll-O-Meter, but they were over-ruled by the umpires in instant replay, who award it a 1.4.

The Armenian judges lodged a formal protest!

It was sufficiently trollish, of course, but way too obvious. It was poorly written, poorly executed, and was so incredibly lame as to lack the true drawing power of a really masterful troll.

Maybe as high as a 1.6 for the intense stupidity of the premise, but a 9.8? Never!

The Armenian judges tear their hair out, throw their balalaikas down in dismay, and perform the traditional Armenian Dismay Chant!

They demand a recount!

It's use it or loose it. I've turned on the rig several time during commute and during the day when I get a chance. The 70cm band in RI/SE MA is dead. Throw a call out, hear nothing back.

2M is pretty much the same. It's just too bad.

Cathy,

From experience, I would advise you not to depend on realtors, or anyone else who has an interest in the sale, to inform you concerning restrictive covenants. It's really not in their interest. The best thing to do when you find a property in which you are interested is to go to the courthouse and look up the information yourself.

No problem...CBers will just tell the inspectors they are running in the
"milliwatt" region...Of course it's like 100,000,000 milliwatts!

Big difference.

"UHF CB" is known as GMRS, or General Mobile Radio Service. It's in the
462-467MHz range.

MURS is five discreet channels in the 151-156MHz range, or "VHF".

Am I mis-understanding or mis-interpreting something, or
doesn't 11-meter stuff have to be "type accepted"?

I can't imagine homebrew conversions being "type acceptable"!

No, the experimental service is also available for people who want to
run non-type-accepted equipment.

I _think_ there might still be a provision under Part 73 to allow broadcast
stations to operate non-type accepted transmitters under certain circumstances
if they can provide measurements that the equipment meets the standards of
the type requirement, and they affix a label to the equipment. I seem to
recall that it only applies to equipment built by the station itself. This
may have been removed from the rule book since I took my First Phone test.

>On the third hand, the 11 Meter band is not Amateur radio service.

11M is a funny thing. It's not really one thing and it's not really another.

Acutally, at potentially fatal amperages, it doesn't matter which hand you grab the juice from. I've had to deal with electrocutions in which the victim had no upper extremity contact with the source at all...they're dead none-the-less.

Cathy:

First off, you need the services of a good *real estate* attorney. Not just any lawyer will do; you need someone who does RE as a specialty and who deals with CC&Rs (codes, covenants and restrictions) on a daily basis. Make sure the attorney understands that his/her job is to dig up any and all restrictions on any property you might be interested in *before* you sign anything.

Second, require that you and your attorney be provided with a complete and up-to-date set of the deed, title and all covenants and deed restrictions *before* you make an offer, and read them thoroughly. Sometimes they are part of the deed/title itself but often they are not. States differ widely and you may need to be a bit insistent on what you want to see. Almost all properties built in the past 40-50 years have some sort of restrictions, and those built in the last 30 years often have lots and lots of restrictions of various types. Note that most restrictions are intentionally designed to be *impossible* to change, and that by signing on the dotted line you agree to abide by *all* of them.

Third, try to educate the realtor. Show her some typical amateur antenna installations so she has a better idea of what it is you want to put up. Terms like "antenna tower" mean different things to different people.

Fourth, realize that most but not all of the people involved in a real estate transaction only get paid if you actually buy a house. No sale = no comission/fees/taxes.

In my case the realtor and attorney were able to get me a complete copy of the restrictions fairly easily. They were *not* part of the deed/title documents - instead, those documents referred to the restrictions, which had to be retrieved from the county courthouse records. I had to ask specifically to see them early on in the transaction - if I hadn't insisted, I would never have seen them at all. Until somebody complained.

Even though my house is over 50 years old and there has never been any sort of home owner's association, there were a page and a half of restrictions. Most of them seem a bit comical today (no raising livestock on a property that is 60 x 120 feet) or have been superseded by more-restrictive township ordinances (setbacks, advertising signage, noise). No mention of antennas but I can't have a freestanding tower (or a shed) with a concrete base because that would constitute a "structure" and only the house and garage structures are permitted.
Doesn't matter to me because there's no room for a tower anyway but that's the sort of thing to look for.

Good luck!

I have a used mobile amp that my son can't use anymore since charlie came calling. I tried to warn him about the tvi to his apartment neighbors.

INTRUDER DRV-400 CB radio amplifier has 2/2sc2290's Driving 4/2sc2879's Transistors * 14V Output 700 Watts * 18V Output 1000 Watts.

I'll take $425 for it, shipped to your door. (cont. US)

IIRC, 434 MHz is in the middle of an ATV channel, not the repeater sub band. Part of
me would be willing to concede (on a 2nd or 3rd basis) 434 for a horse trade deal to
avoid BPL. But there is also the aspect of the camel's nose getting inside the tent....
(I also realize that the RFID people are not the same as the BPL people).

There are airport radars at around 445MHz that look for wind shear. The government
IIRC did go out of their way to avoid interference to the ham repeaters in the area at each
such equipped airport.

I think the rules say "no more than 5 (or is it 10) copies of the same
design per year.
Manufacturers who want to make more than that *do* have to get
certificated. That's
what the FCC calls "type acceptance" nowadays.....

Well, there are several different allocations there. There's the
infamous CB band, and various
forest ranger, mil and other such where the "freebanders" operate
illegally.

Sad to say, the legitimate users of those latter bands are being driven
out by the FCC's refusal to do anything about the freebanders. God knows
that the auxiliary broadcast channels at 26 MHz are constantly being trashed.
I've had to move some government comms to 33 MHz where things are a bit
quieter.

Just as an aside, it might be worthwhile to drive around a prospective purchase area and just look for antennas. A couple of polite questions might tell you a lot about what is possible.

It might also be worthwhile to Google for amateur radio clubs in the area to see if they have a feel for local conditions. While neither of these will necessarily be binding on your particular property, they might give you a general clue to the area.

For what it's worth, I live in Daly City, a suburb of San Francisco. This area was built across the 60s. I'm not aware of any local restrictions, but I have two ham friends within a few blocks, one of whom has a few slopers and verticals on his roof and the other of which has about a 60 foot crank-up tower in his back yard with a yagi that barely fits within his own property lines (maybe a 25' x 150' lot).

Westlake, an area closer to San Francisco, maybe even part of Daly City for all I know, has extensive CC&Rs, including requirements to keep your house painted in an acceptable color and to keep a living palm tree on your living green (grass only) lawn (even those whose houses are sliding into the Pacific Ocean, aided by pumping all that water into the ground. Some of the earlier restrictions, like those restricting sales to certain ethnic groups have been overturned by courts and some sections of that subdivision are now easing or abandoning some of the restrictions as the opportunity for the residents to re-vote on them comes up.

All of which is to say that conditions may vary greatly within short distances, whether in urban or rural areas. So I have to agree with the earlier posts which note that the Realtor (tm) -- yes it is a restricted term than just anyone may not use -- is working for the seller and that involving a knowledgeabla local real estate attorney is your only guarantee.

No Alun I like phone .....I get on 2 meters with the local hams ...if you are ever on I-70 give a call on the 147.27 machine. I do, admittedly on occasion, get on HF phone and have had good conversations with others. I will say how ever that most of the poorest operating practices occur there. I derive more hassle free operation via CW and data. The above was in response to a mildly thought out troll.

Ya ya did ....lest you would not be operating with a "ham" ticket. Just like I had to learn obscure musculature functions that I have not needed since my state boards 32 years ago. It is all a part of the process defined by others and bemoaned by the underlings but that is the way it was and is ...don't want to do it fine ....then take another tack.

well,
2 problems with that price:
1. its a USED amp
2. you can BUY a new one for less than that
<ok, more problems>
3. its a "Dirty" amp (most class C devices are)
4. it ain't legal under part 95 or part 97 (for the ham types).

basically, you got a lemmon there.

Very simple, go out a throw away the piece of crap of
amp you have and buy a nice Alpha and your problems will be
over! remember crap signal going in, even a worse
signal coming out!!!!!!!!!!!!!!

Over the last 8 years i've own this alpha i never a had flaw
or problem with this amp.
If your serious about amateur radio like i am, please go
out and buy yourself and nice equipment that you will be
proud to own!

gud luck, metal guy.

Dear Ms. Cathy:
I ran a township zoning board for 18 years. My experience is that real estate agents (by whatever name) will tell a buyer anything! to make a sale. Most of the serious problems dealt with by the board came from buyers believing "their" agents. The agent is not your friend.
[The only honest agents that I encountered were involved with million dollar sales with several lawyers (on each side) keeping them honest, and one other agent who became so appalled at the lack of ethics that she quit.]
A lawyer with experience in real estate is your best defense. Even so, check and double check. You have been provided with some good advice.
Consider the long term benefits of a slightly longer commute time.
In Michigan, 10+ A. is a farm and is treated better than a lot. Raising antennas is best done on a farm.
Good luck. Remember that the agent, as friendly as she or he may seem, is not working in your interest. Verify.
73 Mac N8TT

I passed that way a few days ago. I use the turnpike to visit my cousin in
Michigan (I am in Maryland). I might just try calling you next time,
although I'm not sure when that will be.

Well, I didn't choose to learn code, it was imposed on me. I chose to get the licence, but that isn't the same thing. If you don't see it that way, I don't suppose I can convince you.

I think we already know what the FCC will do re the phone subbands. Although the FCC haven't responded to the WRC petitions, they just released a new NPRM on some other assorted issues and it offers an additional 25 kHz of phone on each of 80 and 40. That ain't much, certainly less than I would like, and scarcely enough to upset the CW guys (although there's bound to be someone!). I think we can take it that will be finalised in the near future.

I don't know about hiring an attorney first off, Jim. Over the course
of buying a hous, I looked at maybe 30 or more. Sorry, I just don't have
the money to pay an attorney to investigate every house I looked at.

When the field got really, really narrow, then perhaps

> Second, require that you and your attorney be provided with a complete

Maybe for a little kickback? Seriously, that is the job they are
supposed to do, and considering th eamount of commission they get, they
are supposed to find out things you need to know.

Mind you, I don't think very highly of most of them. I could tell you
about the time that we took a tour of a house that was already sold. Or
the time we put a down payment on a house that the agent "neglected" to
tell us was in a flood plain until the day after the check was cashed. I
told him he had exactly 30 minutes to repay us the money. Took 15.

> Fourth, realize that most but not all of the people involved in a real

Sure enough. That isn't an excuse for incompetence tho'.

Part of their job, like asking to see only green houses. Or not green
houses.

> Even though my house is over 50 years old and there has never been any

> Doesn't matter to me because there's no room for a tower anyway but
> that's the sort of thing to look for.

I got lucky when I bought my house. I could put up a 40 foot tower
without a problem, and no restrictions on wire antennas. I say lucky,
because I didn't become interested in the ARS until after we were in the
place for 5 years or so.

Tom, do you do psk31? Forgive if I've asked you this before! But If you can do 80 psk, we should have a decent path. I don't know about 20 meters, but would even like to light up on 40 - maybe get more interest going on that band for PSK.

The current kills you, but it takes volts to jump the gap, thousands of them. I have a little L-shaped scar on my right index finger from 10kV that I didn't touch. I'm an EE amongst other things, and I assume you are a physician?? If you say it doesn't matter which hand it is, then I beleive you, as it sounds like you know. I've never worked with power transmission or distribution, only with electronics, so that limits the current quite a bit (but not necessarily the volts)!
